Business Summary (Updated: 10/29/2026)

In the January-September period of 2026, the company continued to strengthen market innovation and adjust its product structure to adapt to market changes, with the company's various industries working together to increase scale. During the reporting period, the company’ s external meat sales volume was 2.731 million tonnes, a year-on-year increase of 9.7%; total operating revenue was RMB 42.95 billion, a year-on-year decrease of 3.8%, mainly affected by hog and meat price trends; net profit attributable to parent company shareholders was RMB 3.64 billion, down 8.0% year on year, mainly due to hog price movements and increased expenses.

By business segment:

Meat Products Business: The company advanced channel innovation and transformation, increased market support and enhanced market service capacity. Sales volume through emerging channels increased by 41.1% year on year, and sales volume of packaged meat products rose by 5.8% year on year. Increased marketing expenses led to lower profit per tonne. Benefiting from larger scale, operating profit remained generally stable year on year.

Fresh Meat Business: Taking advantage of low hog prices, the company actively developed customers and strengthened terminal network construction, achieving a substantial growth in production and sales scale. External sales volume of fresh pork reached 1.212 million tonnes, up 11.5% year on year. Profit of fresh products increased while profit of frozen products declined, leading to an overall year-on-year decrease in profitability.

Other Business Segments: The hog breeding business achieved higher output, yet its year-on-year losses widened due to low hog prices. The scale of the poultry industry has maintained growth, and the breeding performance has significantly improved, with operating profits turning from losses to profits compared to last year.

Highlights (Updated: 10/29/2026)

1. Brand and Scale Advantages

As a national key leading enterprise in agricultural industrialization, the company has built a complete meat-industry value chain. Centered on slaughtering and meat-product processing, it has expanded upstream into feed production and livestock breeding, and downstream into packaging and commercial operations. Supporting businesses including foreign trade and condiment manufacturing have also been developed. The company has formed a meat-industry cluster featuring prominent core-business strengths and close synergy among auxiliary segments, which delivers notable advantages in cost control and sustainable profitability.

Leveraging its sound industrial system and solid technical capabilities, the company keeps launching well-received market offerings and has earned consumer trust through consistent high-quality reputation. The brand value of its flagship brand “Shuanghui” has climbed to RMB 91.5 billion, leading China’ s meat industry for multiple consecutive years.

2. Layout and Network Advantages

At present, the company operates 30 modern meat-processing bases and supporting businesses across 18 regions including Henan, Heilongjiang, Hebei, Shandong, Anhui, Hubei, Jiangxi, Shanghai, Shaanxi, Sichuan and Guangxi. Its industrial layout covers major domestic hog-producing regions, ensuring stable raw-material supply. Meanwhile, the company maintains effective synergy with its controlling shareholder Rotary Vortex Limited, and continuously expands its international procurement network. Global resources are leveraged to drive cost reduction and efficiency improvement, and enhance the company’ s overall competitiveness.

Deeply rooted in the domestic market, the company has established a nationwide sales network with nearly 2 million end-user outlets. Benefiting from its well-developed industrial footprint and extensive sales network, the company's products reach almost all provinces across the country within the same day, fully meeting consumers' immediate demand for meat products.

3. Equipment and Quality Control Advantages

The company has introduced internationally advanced technologies and equipment to upgrade the traditional meat industry and build modern meat-processing bases. It keeps advancing intelligent and digital upgrading across production processes, and strengthens its technological edge by adopting new technologies including industrial robots, the Internet of Things and big data.

The company has taken the lead in introducing management systems such as ISO9001, HACCP, and ISO22000, and has established a scientific, rigorous, and comprehensive product quality and safety internal control system. It has established a quality management center and a quality research department, equipped with nearly a thousand quality control personnel distributed in various links of the industry chain, to implement full process and all-round food safety control. In addition, the company actively utilizes digital technology to drive intelligent production and has established an information-based traceability system covering the entire process from procurement, processing, warehousing, distribution to terminal sales. The system enables “forward tracking, reverse traceability, process controllability and accountability for liabilities” , so as to guarantee product quality and food safety.

4. Technical and Innovation Advantages

The company hosts a national-level enterprise technology center and a postdoctoral research workstation. Drawing on multiple provincial-ministerial R&D platforms including the Henan Meat Product Technology

Innovation Center and Engineering Research Center, it assembles more than 300 researchers specializing in food science, agricultural-product processing, animal husbandry and veterinary medicine, and polymer materials, placing its R&D capability among the industry’ s front-runners.
The company keeps increasing investment in product innovation and R&D. Thanks to years of technological accumulation, it has successfully developed over 1,000 products covering ham sausages, ham, sausages, canned goods, braised and cooked foods, catering ingredients, fresh products, featuring rich categories and distinctive attributes. The company commits to iterative product upgrading, consistently delivering premium food experiences to consumers. Meanwhile, its robust comprehensive R&D strength strongly underpins the brand’ s market competitiveness and fuels sustained corporate vitality.

5. Talent and Management Advantages
The company’ s management team has long been deeply engaged in the slaughtering and meat-processing sector. With profound insights into the meat industry, extensive industry experience and outstanding corporate management capabilities, the management is capable of keenly capturing market shifts and industry opportunities to steer the company toward sound development. Meanwhile, the company attaches great importance to talent recruitment and development. It has built diversified recruitment channels, a systematic training system and open, transparent promotion pathways, continuously strengthening talent pipeline development. By leveraging talent as a key driving force, the company empowers its sustainable growth.

Guided by the development philosophy of strengthening core businesses and expanding auxiliary businesses, the company actively introduces advanced management systems and optimizes and innovates them in light of its actual conditions. In terms of organizational structure, the company adopts a divisional management model. Multiple independent divisions are set up by business segment with full operational autonomy, which effectively improves specialized operation and market response efficiency. Furthermore, the company accelerates corporate digital transformation, comprehensively deepens management upgrading and efficiency-driven reforms, fosters new-quality productive forces, and propels the high-quality development of the enterprise.

Going forward, the company will remain focused on its core meat-related businesses and implement its policy, namely further advancing industrialization, diversifying meat product portfolio, promoting corporate internationalization and driving enterprise digitalization. It will continuously consolidate its core competitive strengths. Taking meeting people’ s growing demand for meat products as its mission, the company will keep expanding its industry scale, optimizing product offerings and strengthening corporate competitiveness, so as to contribute to the high-quality development of China’ s meat industry.

Investment Risks (Updated: 10/29/2026)

Potential challenges and risks facing the Company:
1. Market Risk
In 2025, China’ s total meat output exceeded 100 million tonnes, and per-capita meat availability rose above 70 kilograms. The meat market is adequately supplied, and the growth driver of the meat industry is shifting from “quantitative expansion” to “qualitative improvement”. Large-scale operation, standardization and digital-intelligent transformation have become major development themes, while backward production capacity is being phased out at an accelerated pace. The company will fully seize opportunities from industry consolidation, continuously improve operational and management efficiency, consolidate core competitiveness, and maintain its leading position amid industry transformation.
2. Raw-material Supply and Price Volatility Risk
Prices of key raw materials for the company’ s production are subject to cyclical fluctuations driven by growth cycles, livestock inventory, market supply-demand balance and other factors, which may impact the company’ s operating results. In response, the company will strengthen its market-trend analysis capability, step up integration of upstream resources, build a safe, reliable and stable procurement system, and actively use commodity futures hedging tools to hedge the risk of commodity price fluctuations and enhance profit stability.
3. Product Quality and Food-Safety Risk
Meat products go through a long value chain covering breeding, slaughtering, processing, logistics and sales, involving numerous links. Oversights at any stage may trigger food-safety incidents and impair brand reputation and business performance. The company will continue to improve its quality and safety control system covering the entire chain, strengthen supplier management, and strictly implement admission audits; intensify the testing of drug residues to achieve early detection, early warning, and early disposal; strictly implement batch-by-batch inspection and ensure the quality of products leaving the factory; strengthen the quality awareness of all staff, fully implement primary-party responsibilities, and effectively ensure food safety.
4. Consumption Transition Risk
China’ s consumer market has entered a new phase featuring steady overall growth and profound structural adjustment. Trends such as value-for-money consumption, the rise of lower-tier markets and transformation of emerging channels are emerging as new growth drivers for the industry. Consumer demands are becoming increasingly diversified and segmentation in the meat-product market is accelerating, placing higher requirements on the company’ s product-innovation capacity. Accordingly, the company will establish an agile and efficient product-innovation mechanism, keenly identify market dynamics, conduct new-product R&D oriented toward consumer needs, continuously launch new offerings, and consolidate the corporate competitive “moat”.
5. Rising Social-cost Risk
The landscape of labor supply keeps evolving, while regulatory standards for food safety, environmental protection and other areas are becoming increasingly stringent. Combined factors push up the Company’ s operating costs in labor, compliance, environmental protection and other dimensions. To address this risk, the company will pursue refined management, and achieve regular cost reduction and efficiency improvement through technological innovation, management upgrading and process optimization.

In response to the above challenges and risks, the company will focus on the following tasks:
1.Deepen professional reform of the processed meat business to enhance operational efficiency and expand scale.
2.Implement a differentiation strategy for the fresh products business and strengthen market development to expand scale.
3.Strengthen refined management of the hog farming business to accelerate cost reduction, efficiency improvement and business performance.

4.Consolidate the industrial chain foundation of the poultry business and leverage production-marketing synergy to increase benefits.
5.Focus product innovation on diversified demand and adjust the product structure to align with consumption trends.
6.Grasp market trends in marketing planning to drive brand upgrading and improve effectiveness.
7.Deepen digital empowerment throughout all processes to promote quality improvement, efficiency enhancement and sustainable development.
8.Strengthen echelon construction in talent management and optimize development mechanisms to enhance vitality.
9.Integrate the ESG concept into corporate strategy, fulfill social responsibilities and create value.
