Group Report 2025

Integrated financial and sustainability report

We are building the world of tomorrow.

HOCHTIEF

Group Report 2025

INTEGRATED ANNUAL FINANCIAL AND SUSTAINABILITY REPORT

This Group Report contains the financial and sustainability reporting of the HOCHTIEF Group for 2025. It highlights the close relationship between economic and environmental, social and governance aspects, and their combined influence on the long-term success of our business.

Information on this Report

The Group Report covers the period from January 1 to December 31, 2025, and follows on from the 2024 Group Report. We indicate explicitly in this report where data relates to a different reporting period, year-on-year comparisons are not possible without restriction, or limits of coverage are reached. The Group Report 2026 is scheduled to appear in February 2027.

The Consolidated Financial Statements are prepared in accordance with the requirements of International Financial Reporting Standards (IFRS® Accounting Standards) as adopted by the EU and with supplementary provisions of German commercial law to be observed under Section 315e (1) of the German Commercial Code (HGB). The report is published using the mandatory European Single Electronic Format (ESEF).

We have prepared a combined sustainability statement in accordance with Directive (EU) 2022/2464 of the European Parliament and of the Council of 14 December 2022 (Corporate Sustainability Reporting Directive/CSRD), Article 8 of Regulation (EU) 2020/852, and Sections 289b to 289e, 315b, and 315c of the German Commercial Code (HGB).

The HOCHTIEF Sustainability Plan 2025 and updated information on selected targets in it are presented under “Further information” in this report. This Group Report serves as our report on progress in implementing the UN Global Compact principles (www.unglobalcompact.org) and is published on the organization’s websites. An overview of HOCHTIEF's contribution to the United Nations Sustainable Development Goals is likewise provided under “Further information.”

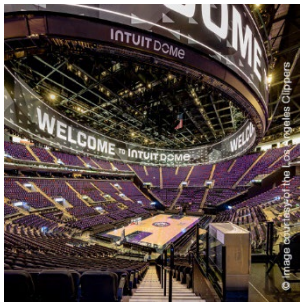
The HOCHTIEF Group at a glance

HOCHTIEF's operating companies are active worldwide. The Group focuses on strategic growth verticals including the AI-Digital and Tech sector as well as the Energy, Defense, and Critical Minerals markets supported by its long-standing, local, presence in core infrastructure markets. HOCHTIEF's financial reporting is presented across the four segments Turner, CIMIC, Engineering and Construction, and Abertis:



Turner

Turner is our advanced-tech building solutions company and a leader in the United States in the data center, health care, education, airports, sports and commercial office segments. The company primarily operates on the basis of a construction management contracting model. Turner delivers services on building projects of all types and sizes throughout North America and around the world.

For more information, please see the Segment Reporting section.

CIMIC

CIMIC Group's operating units occupy leading positions in the industrial, energy, natural resources and civil infrastructure business. They cover the entire infrastructure life cycle from development and investment through construction to operations and maintenance, particularly in Australia and in the wider Asia-Pacific region.

For more information, please see the Segment Reporting section

Engineering and Construction

Engineering and Construction encompasses HOCHTIEF's activities in Europe plus our at-equity accounted interest (38.2%) in FlatironDragados. Our European activities are delivering sustainable solutions in energy transition as well as digital, social, and transportation infrastructure. The focus is on Germany and neighboring countries. FlatironDragados is our civil engineering specialist in North America.

For more information, please see the Segment Reporting section.

Abertis

HOCHTIEF holds a 20% stake in Abertis HoldCo, S.A., a leading international toll road operator. The company operates a total of some 8,000 kilometers of toll road in 15 countries across Europe, the Americas, and Asia.

For more information, please see the Segment Reporting section.

Our vision:
HOCHTIEF is building the world of tomorrow.

Clear commitment to fairness, sustainability, and innovation: Examples 2025

We take a constructive approach to the diverse challenges facing our company. In doing so, we consider engagement with a wide range of stakeholders to be an important requirement and motivation. We seek dialogue, starting with our own staff, as well as with partners and communities. Long-term memberships and voluntary commitments also reflect our responsibility. We are consciously involved in organizations that share our concerns regarding sustainability and climate protection. (For in-depth information on HOCHTIEF's memberships, please see www.hochtief.com/sustainability/commitments). Our company was once again rated positively in a number of established sustainability ratings in 2025 and included in renowned indexes.

Awards for projects and services in the reporting year (examples)

Time and again, HOCHTIEF companies win awards in recognition of their excellent project work and the results of their efforts. Below are some examples from the 2025 reporting year:

Turner

Turner Construction

- "Top Healthcare Construction Manager", awarded by Modern Healthcare
- "One of America's Greatest Workplaces", awarded by Newsweek
- Listings in various rankings of Forbes Magazines in 2025: "America's Best Large Employers","Great Employer for New Graduates", "One of America's Best Employers for Company Culture", "America's Dream Employers", and "Best Employer for Women"
- "Skydio Aerial Achievement Award 2025", category "Best New Program of the Year" for pioneering use of autonomous drone technology
- "Constructor Award", awarded by the AGC of California
- "Outstanding Safety Performance Award" of the Statewide Educational Wrap Up Program for the Evergreen Valley College Sequoia project
- "iF Design Award 2025" for Turner's headquarters in New York, Interior Design category
- "Concrete Innovations Awards" of the National Ready Mixed Concrete Association for San Francisco International Airport/Terminal 3 West, Intuit Dome in Inglewood, California, and for a research facility in Massachusetts
- "2025 Wood in Architecture Award Winners" of the Wood Products Council for the Dicke Hall project (Trinity University) in San Antonio, Texas
- "2025 FSC Leadership Award" of the U.S. Forest Stewardship Council for the Seattle Aquarium Ocean Pavilion, Washington
- "National Awards of Merit" by the Design-Build Institute of America for the California Firefighters Memorial Expansion and the United Airlines Flight Training Center Building H projects

Dornan

- "Best Employers Ireland", awarded by the Sunday Independent

CIMIC

CPB Contractors

- "Contractor Excellence Award" by Infrastructure Partnerships Australia for Bruce Highway Upgrade, Cooroy to Curra project Section D2 (Gympie Bypass)
- Warringah Freeway Upgrade project won the "Arvo Tinni Award" in the "Best Urban Pavement Infrastructure Design" category, recognized by the Australian Society of Concrete Pavements
- "Aboriginal Engagement Award" for the NeWest Alliance, awarded by the Civil Contractors Federation (Western Australia)
- Supply Nation's "Corporate Member of the Year Award"

Leighton Asia

- "Hong Kong Most Innovative Knowledge Enterprise Award (MIKE)"
- "National Occupational Safety & Health Gold Award" in the Construction Engineering category for Malaysia team
- Singapore: "RoSPA Gold Award", awarded by the Royal Society for the Prevention of Accidents for the TR308/Provision of Electrical Services for Road Tunnels project, as well as "RoSPA Silver Award" for the N103 – North South Corridor project
- "Top Performing Contractor in High-risk Safety Surveillance" and "Safety Leadership Measurement" awards for the STT Fairview 1 Data Centre Joint Venture in the Philippines by the Greater Capital Railway Consortium

UGL

- "Passenger Operations Excellence Award" for UGL as part of the Metro Trains Sydney (MTS) alliance for the launch of the first passenger service on the Sydney Metro City Line; awarded at the 2025 Rail Industry Awards of the Australasian Railway Association
- Three "Diamond Awards" at the 2025 LearnX Awards for UGL's Environment and Sustainability Project Fundamentals training program:
  - Diamond – Best learning and development capability uplift project
  - Diamond – Best learning and development environmental education
  - Diamond – best learning and development environmental, social, and governance training

Sedgman

- Sedgman was recognized at the Sustainable Industrial Manufacturing Asia Pacific Conference (SIM-PAC) for Mitigating the Effects of Mining. The SIM-PAC award highlighted Sedgman's contribution to collaboration in developing innovative processing approaches to reduced energy and water footprints, and circular economy solutions.

Pacific Partnerships

- Pacific Partnerships, CPB Contractors and UGL: "Project of the Year" at the Infrastructure Partnerships Australia National Infrastructure Awards for Sydney Metro City & Southwest PPP: OTS2 PPP and Sydney Metro

Thiess

- Blue rating in the Indonesian government's Public Disclosure Program for Environmental Compliance (PROPER)
- Thiess Balikpapan Support Facility achieved an Occupational Health and Safety Management System Gold rating from the Indonesian Ministry of Manpower
- Health and Safety Management System Gold certification from Mutual de Seguridad for Thiess' Santiago head office in Chile

Engineering and Construction

HOCHTIEF Infrastructure

- A40 Rhine bridge in Duisburg
  - "Innovationen aus der Praxis" award (innovations from practice) for outstanding projects, recognized by the VDBUM association for the innovative auxiliary cable construction used in the dismantling of cable-stayed bridges at the Rhine bridge
  - "Best of the Best Award", awarded at the World Demolition Awards for the demolition of the Rhine bridge
- Award for the Małopolska Science Center Cogiteon in Krakow in the "Krakow without Barriers" competition in the "Public service facilities" category for barrier-free architecture and sophisticated technical solutions

HOCHTIEF PPP Solutions

- "Best Social Infrastructure Project" for the "University of Staffordshire Student Village" project in UK, received at the Partnership Awards 2025
- "Best Road Deal 2024" at the EMEA Project Finance Awards in 2025 for the Aegean Motorway S. A. project in Greece
- Innovation award "Innovationspreis der deutschen Mobilitätswirtschaft" for EDGITAL, awarded by Deutsche Verkehrswissenschaftliche Gesellschaft (German association for transportation science)

High reputation rating confirmed

The public also appreciates HOCHTIEF's achievements. This is reflected in the top image ratings for our Group: in addition to being widely known, our surveys over many years show that HOCHTIEF's reputation is highly regarded. In the reporting year, 94 percent of decision-makers surveyed in large companies in a study commissioned by HOCHTIEF and conducted by the market research institute YouGov rated HOCHTIEF's reputation as excellent, very good, or good.

Pedro López Jiménez, Chairman of the Supervisory Board

Report of the Supervisory Board
Dear Shareholders,

Throughout 2025, the Supervisory Board performed all tasks required of it by law and the Company's Articles of Association. Those tasks notably include advising the Executive Board in its management of the Company and overseeing the Executive Board's activities. The Executive Board provided the Supervisory Board continuously, comprehensively, and promptly with information, both in writing and verbally, on all key aspects of business development.

Five ordinary meetings were held in 2025. In those meetings, the Supervisory Board made the decisions necessary on the basis of comprehensive reports and proposed resolutions submitted by the Executive Board. All five meetings were held in person. Both in its plenary and in its committee meetings, the Supervisory Board had sufficient opportunity to consider proposals in detail. The Supervisory Board adopted all resolutions as required by law and the Articles of Association, where necessary by written procedure. To ensure that events of exceptional importance to the situation and development of the Group were addressed on a timely basis, the Chairman of the Supervisory Board maintained constant contact with the Chairman of the Executive Board.

With one exception, all members of the Supervisory Board attended all meetings during their term in office. An overview of meeting attendance by each member at meetings of the Supervisory Board and its committees is provided in the table below. Both the shareholder representatives and the employee representatives met separately on a regular basis to prepare the Supervisory Board meetings. On individual topics, the Supervisory Board consulted without the attendance of the Executive Board.

Main points of discussion. The Supervisory Board addressed a large number of topics in the 2025 reporting year. Notable topics of discussion at the five meetings were as follows:

At the financial statements meeting on February 19, 2025, the Supervisory Board consulted on the Annual Financial Statements and Consolidated Financial Statements for 2024. Furthermore, the Supervisory Board considered the agenda and proposed resolutions for the April 2025 Annual General Meeting, including the dividend proposal and the proposal for the appointment of the auditor. A further topic was operational planning as well as both financial and balance sheet budgeting for the years 2025 to 2027. In this regard, the Executive Board explained the key planning assumptions and provided an overview of significant developments in the HOCHTIEF Group. The Supervisory Board appraised, noted, and concurred with the Executive Board's budget planning. Another agenda item was Executive Board remuneration and in particular the variable compensation for 2024 and 2025.

In the Supervisory Board meeting on April 28, 2025, the Executive Board reported on the performance of the business in the first quarter as well as on the upcoming Annual General Meeting. Other agenda items comprised a bond issue and, once again, variable Executive Board compensation. Furthermore, the Supervisory Board was briefed on the reports submitted to the Audit/Sustainability Committee by the Compliance Officer, the Human Rights Officer, and the Head of Corporate Auditing.

In June 2025, the Supervisory Board appointed Ms. Christa Andresky as a member of the Executive Board and as the new Chief Financial Officer, succeeding Mr. Peter Sassenfeld. This took place by written procedure on the basis of a resolution proposal put forward by the Human Resources Committee.

At its meeting on July 23, 2025, the Supervisory Board considered the course of business in the first half of the year. The Supervisory Board also discussed an M&A transaction and gave the necessary approval. This related to the sale of the Leakes Road data center project to the ACS data center platform.

At the Supervisory Board meeting on September 10, 2025, the Chairman of the Executive Board provided the Supervisory Board with a comprehensive report on the current situation of the Company, recent developments, and the strategic direction. The Supervisory Board discussed this report in detail, focusing in particular on the strategic direction and organizational implications of the Company's growth plans. The Supervisory Board also engaged Deloitte GmbH Wirtschaftsprüfungsgesellschaft to review the sustainability reporting as part of the Group Report 2025.

The Supervisory Board's final meeting in the reporting year was held on November 6, 2025. At that meeting, following a detailed report on the subject by the Chairman of the Executive Board, the Supervisory Board discussed the course of business in the first nine months of the year. The full Supervisory Board was also informed about the Audit/Sustainability Committee's consultations on the risk management system and the risk report. Moreover, the Supervisory Board passed a resolution on the Compliance Declaration pursuant to Section 161 of the German Stock Corporations Act. Finally, the Supervisory Board was informed of the latest developments in the Vulcan project, which is intended to strengthen the Group's position in the European lithium ecosystem. The Supervisory Board then passed the necessary resolutions.

[1] Attendance = number of meetings attended by Supervisory Board member/total number of meetings during tenure

The **Audit/Sustainability Committee** met five times in 2025, in each case in person.

Topics of intensive discussion were the quarterly reports, the half-year financial statements, the Annual Financial Statements, and the Consolidated Financial Statements. In each instance, the Supervisory Board or the Audit Committee discussed the reports and financial statements with the Executive Board prior to publication. The Audit/Sustainability Committee provided the Supervisory Board with a recommendation for the latter's proposal to the Annual General Meeting regarding the appointment of the auditors, and prepared the audit engagement letter for issuance, including the agreement on audit fees. Additionally, the Committee addressed the Group's risk management system, the internal control system in relation to financial reporting, and the internal audit report. The Compliance Officer reported to the Committee with an in-depth presentation on the development of the compliance organization, individual potential compliance cases, and measures taken in consequence. Furthermore, the Human Rights Officer provided the Committee with a report on his remit. The Committee also addressed the Sustainability Plan 2025 and the sustainability reporting on several occasions. Another regular item at the meetings held during the reporting year comprised the reports on major projects in the Turner, CIMIC, Engineering and Construction, and Abertis segments.

There were three meetings of the **Human Resources Committee** in 2025, all of which were held by video conference. In those meetings, the Committee considered details of Executive Board compensation and the structure of the compensation system for the Executive Board, and adopted the necessary resolutions. Additionally, the Human Resources Committee prepared personnel-related decisions for the Supervisory Board and recommended that the latter appoint Ms. Christa Andresky as member of the Executive Board and new Chief Financial Officer, succeeding Mr. Peter Sassenfeld.

The **Nomination Committee** did not meet during the reporting year as the need did not arise.

The **Mediation Committee** pursuant to Section 27 (3) of the Codetermination Act (MitbestG) was not convened in 2025.

Conflicts of interest. Under the rules of the German Corporate Governance Code and the Supervisory Board's Code of Procedure, members of the Supervisory Board are required to disclose any conflicts of interest without delay. In order to avoid any concern of a conflict of interest in the vote on the sale of the Leakes Road data center project to the ACS data center platform, the following procedure was adopted at the meeting of the Supervisory Board on July 23, 2025:

The Chairman of the Supervisory Board as well as Ms. Aldámiz-Echevarría González de Durana, Mr. del Valle Pérez, and Mr. García Altozano did not take part in the discussion and abstained from voting on this item in order to avoid any concern that there may be a conflict of interest.

Annual Financial Statements 2025. The Annual Financial Statements prepared for HOCHTIEF Aktiengesellschaft by the Executive Board in accordance with the German Commercial Code (HGB), the Consolidated Financial Statements prepared in accordance with International Financial Reporting Standards (IFRS), and the combined HOCHTIEF Aktiengesellschaft and Group Management Report for 2025 have been audited and issued with an unqualified auditors' report. The audit was performed by Deloitte GmbH Wirtschaftsprüfungsgesellschaft, the auditors elected by the Annual General Meeting on April 29, 2025 and engaged by the Supervisory Board to perform the audit of the Annual Financial Statements and Consolidated Financial Statements. The bookkeeping system was included in the audit. Additionally, Deloitte GmbH Wirtschaftsprüfungsgesellschaft reviewed the Group sustainability statement for 2025 in a separate assurance engagement in accordance with ISAE 3000 (Revised), providing limited assurance.

This was the third time the audit was performed by Deloitte GmbH Wirtschaftsprüfungsgesellschaft. The key audit partners responsible for carrying out the audit were exchanged in accordance with statutory requirements. For the reporting year, the key audit partners for the Consolidated Financial Statements and for the Annual Financial Statements were Mr. André Bedenbecker and Mr. Michael Pfeiffer.

The documents required for the audit, the Group Report, the proposal for the use of net profit, and the auditor's reports were sent to all members of the Supervisory Board in good time prior to the meeting of the Audit/Sustainability Committee and the Supervisory Board's financial statements meeting on February 19, 2026. In addition, the Executive Board provided verbal explanations at the same meeting. In that meeting, the key audit partners explained the main findings of the audit and were available to provide further information.

It was determined by the auditors that the Executive Board possesses a suitable early warning system for risks. The Audit/Sustainability Committee had scrutinized the statements and reports prior to the Supervisory Board's meeting and subsequently recommended that the Supervisory Board approve the financial statements. The Supervisory Board examined the Annual Financial Statements, the Consolidated Financial Statements, the combined Company and Group Management Report, the sustainability reporting as well as the proposal for the use of net profit. It raised no objections.

Taking the Audit/Sustainability Committee's consultations into account, the Supervisory Board approved the results of the auditors' audit of the Annual Financial Statements and Consolidated Financial Statements. The Supervisory Board has approved and thus adopted the Annual Financial Statements and has approved the Consolidated Financial Statements. It concurs with the proposal for the use of net profit submitted by the Executive Board.

Report in accordance with Section 312 of the Stock Corporations Act (AktG). The report on relationships with affiliated companies prepared by the Executive Board in accordance with Section 312 of the German Stock Corporations Act (AktG) was audited by the auditors. This report, and likewise the related audit report, went out to all members of the Supervisory Board in good time ahead of the latter's financial statements meeting. The key audit partners took part in the Supervisory Board's discussions on these documents and reported on the main findings of the audit. In accordance with Section 312 AktG, the Supervisory Board examined the report and found it to be in order.

The auditors issued the auditor's report in accordance with Section 313 (3) AktG as follows:

"Based on our audit and assessment carried out in accordance with our duties and obligations as auditors, we confirm that

1. the statements of the report are factually accurate,
2. in the case of the legal transactions set forth in the report, the performance by the Company was not unreasonably high."

The Supervisory Board noted the auditors' audit findings with approval. On completion of its examination, the Supervisory Board raises no objections to the declaration issued by the Executive Board at the end of the report regarding relationships with affiliated companies.

Changes on the Supervisory Board. Mr. Klaus Stümper retired upon reaching retirement age on October 31, 2025. Ms. Birgit Feldkamp took his place as member of the Supervisory Board on November 1, 2025 as a substitute representative elected by the employees.

The Supervisory Board thanked Mr. Stümper for his years of dedicated service and expert advice on the Supervisory Board and in the committees.

Onboarding measures. In accordance with Recommendation D.11 of the German Corporate Governance Code, the report of the Supervisory Board should include a report on measures taken to support new members of the Supervisory Board in their induction into office (onboarding measures). On her induction, Ms. Feldkamp was provided with the necessary key documents, such as the Code of Procedure for the Supervisory Board and the Company's Articles of Association. In addition, in a personal meeting, she was familiarized with the organization and procedures of the Supervisory Board and its committees and had ample opportunity to ask questions.

The Supervisory Board expresses its thanks and appreciation to the Executive Board, the Group company management teams, and all employees for their work, dedication, and loyal contribution to the Group's success in 2025.

Essen, February 2026

On behalf of the Supervisory Board

Pedro López Jiménez
Chairman

Juan Santamaría Cases, Chairman of the Executive Board

Dear Shareholders
and Friends of Hochtief,

I am delighted to present to you HOCHTIEF's annual report for 2025, a year in which HOCHTIEF achieved an outstanding operational and financial performance. We have made major advances in our strategic delivery and seen a record year for our share price which increased by 160% to EUR 337 per share valuing the company at over EUR 25 billion at the end of last year.

This increase in our stock market valuation reflects investor recognition that HOCHTIEF's strategy has positioned the Group as a uniquely well-placed global provider of engineering-led, end-to-end infrastructure solutions. In particular, we have advanced to become a leader in rapidly expanding strategic growth verticals including the AI, Digital & Tech sector as well as Energy (including Nuclear), Critical Minerals and Defense, where demand for advanced infrastructure continues to accelerate. This momentum builds on our long established, locally embedded presence in core infrastructure markets in North America, Australia and Europe, which remains the foundation of our competitive strength and our ability to scale into these next-generation markets as a life-cycle partner.

Financial performance and dividends
HOCHTIEF sales rose by 15% year on year to over EUR 38 billion in 2025, or 21% fx-adjusted, driven by the Group's successful strategic delivery. As a consequence, and supported by expanding margins, HOCHTIEF's operational net profit increased by an outstanding 26% to EUR 789 million, which rises to +34% on an fx-adjusted basis. This result significantly exceeded the operational net profit guidance the Group provided twelve months ago (EUR 680-730 million) and was even above the updated 2025 target we indicated in November of EUR 750-780 million. Nominal net profit was 16% higher at EUR 902 million.

The quality of the HOCHTIEF's profit delivery is underlined by the strong cash conversion achieved last year. Operating cash flow in 2025 of EUR 2.1 billion was EUR 248 million higher year on year pre-factoring, supported by a strong working capital performance. As a result, the Group ended the year with a slight reduction in net debt despite significant net strategic M&A investments and dividends.

A further highlight of 2025 was the acceleration in growth of new orders which surged to EUR 52.6 billion, up 32% fx-adjusted year on year, and with strong fourth quarter momentum and key wins across our strategic growth verticals. This lifted our order backlog to an all time high of EUR 72.5 billion, up 18% on a comparable basis, providing a strong and diversified foundation for continued growth.

As a consequence of HOCHTIEF's very strong performance and taking into account the solid growth prospects we envisage for 2026 and beyond, the proposed dividend for last year is EUR 6.60 per share. This represents a 26% increase year on year, consistent with the Group's operational net profit growth, and is in line with our 65% dividend payout policy. In July 2025, the Group distributed around EUR 400 million in dividends to shareholders from its 2024 earnings.

Strategic delivery
Our strategic agenda is focused on positioning HOCHTIEF for sustained, high-quality growth while reinforcing the resilience and long-term value of the Group. Our key priorities are:

- Top-line growth, driven by expanding our value proposition and building the infrastructure of the future by embracing high growth sector mega-trends
- Expanding our margins by delivering high-value, end-to-end services with reinforced engineering capabilities, supply chains and integrated systems
- Operational integration and excellence by continuing our transition into to a more high-tech organization leveraging AI-enabled tools and data to drive innovation and a lower cost base
- Reinforcing the growth and sustainability of our profit and cash flow profile by further de-risking the Group's business model including expanded use of collaborative contracting and disciplined risk-management frameworks
- Generating long-term value creation and sustainable dividend growth to drive shareholder remuneration

As I described above, and a consequence of the Group's strategic delivery, HOCHTIEF has achieved leading positions in several high-growth, and inter-related, sectors.

We command a strong competitive position in the **AI, digital and tech sector** and we have solidified our global leadership in **data center** engineering and construction with EUR 16.8 billion of new orders in 2025 representing 21% of the Group's total backlog.

Growth in the global data center market remains extremely strong and we have solid medium-term visibility for our business via our order book and project pipeline. Driven by soaring demand for cloud services and Artificial Intelligence, data center and compute capex is expected to quadruple by 2035 boosted by the growth of generative AI and further cloud migration.

The Group has the capacity and capabilities, as a firmly established global end-to-end solutions provider, to address rising demand by leveraging its scale and relationships with hyperscalers and subcontractors, applying its global sourcing expertise as well as our increasing adoption of modularization, or offsite manufacturing, to deliver projects faster, safer, and with higher quality.

As part of the strategy to expand the Group's presence in the entire AI ecosystem, HOCHTIEF is developing a pan-European network of sustainable **edge data centers**. An important event during the year was the inauguration of the first sustainable edge data center near Essen developed, owned and operated by HOCHTIEF, a major milestone for the Group's data center strategy. Furthermore, HOCHTIEF will operate this edge data center network with innovative cloud computing solutions that offer digital sovereignty.

Overall, we are increasing our participation across the full AI-stack including datacenters, semiconductors, cloud infrastructure services and applications as well as moving into agents and robotics.

Energy is another strategic growth market for HOCHTIEF. Rising investment in energy security and the global transition to low-carbon systems underpin sustained demand for advanced-technology infrastructure. The Group is deeply engaged in these segments, delivering projects spanning electricity generation, grid-scale storage, high-voltage transmission and regional grid fortification.

HOCHTIEF has several decades of experience, designing and building nuclear power plants and facilities across the world for renowned global energy companies delivering end-to-end services across the nuclear market. As these technologies evolve and emerge, we are leveraging our global project and engineering capabilities for new-build, SMRs, storage and dismantling, in an industry which could see over EUR 500 billion in investment in Europe by 2050.

During the final quarter of 2025 we secured a EUR 685 million, 15-year framework contract in the UK for civil infrastructure works at the Sellafield nuclear site. And at the beginning of 2026, an important strategic milestone was reached when HOCHTIEF was selected as part of Amentum's global project delivery team with for the Rolls-Royce SMR nuclear program.

In renewables we continue to strengthen our market presence, particularly in Australia, where our companies have delivered more than twenty major renewable and storage projects.

With global battery energy storage systems capacity is expected to rise by 67% in 2025 and ten-fold by 2035, our established experience in battery energy storage positions us strongly for future demand.

We are also capitalizing on the accelerating global requirement for critical minerals, driven by clean energy technologies, digital infrastructure and defense modernization. HOCHTIEF, through the combined capabilities of Sedgman and Thiess, has built a global position in minerals processing and sustainable mining services. Our track record spans over 140 engineering projects across key commodities including lithium, copper, rare earths, nickel, vanadium, uranium, and zinc.

In December, the Group expanded its partnership with Vulcan Energy with a significant equity investment as well as securing an end-to-end role in developing its lithium production and processing infrastructure. As part of the agreement the Group has been appointed as the Engineering, Procurement and Construction Management contractor and named as preferred supplier for the project's civil construction works. We have also won a contract to provide the feasibility study and front-end engineering design work for a major lithium project in France.

Investment in **defense** infrastructure is expected to substantially increase globally. For example, in Europe, major multi-year defense investment plans, including in Germany, present substantial opportunities in defense-related capital works and potentially via the PPP model. And in Australia the government plans AUD 765bn in Defense spending over the next decade.

HOCHTIEF is well placed in this sector, leveraging our strong civil engineering capabilities, proven project execution record, and long-standing presence across key defense markets. Combined with our security credentials, this enables us to capture high-value opportunities with enhanced margins and reduced operational risk.

At the end of 2025 the Group had a defense order book of over EUR 2 billion which included the construction of a major dry dock at Pearl Harbor for the U.S. navy, flood recovery work for a US airforce base, as well as work for the Royal Australian Air Force base in Queensland and defense infrastructure upgrades in South Australia. Furthermore, our North American civil works business FlatironDragados has been selected as one of a group of companies for a potential USD 15 billion multiple award contract to provide construction services for the U.S. Air Force Civil Engineering Center.

Our **core infrastructure** capabilities are key for the Group's ability to fully harness the growth opportunities we have identified.

In the U.S. Turner holds leading positions across 13 segments in the U.S. including healthcare, education, airports as well as data centers. Furthermore, the Group has been a global leader in transport infrastructure and sustainable mobility for several decades and the outlook for the sector is very positive due to several infrastructure stimulus packages in key geographies. And in Germany, the EUR 500 billion infrastructure fund will see its first full-year of deployment in 2026. HOCHTIEF is very well positioned to benefit due to the scalability of its business model and its core expertise in bridges, tunnels, and rail, with the group's German order book doubling over the last three years.

Capital allocation

Active and disciplined capital allocation is a key objective for management and shareholder remuneration remains a priority. We regularly assess strategic M&A opportunities with our capital deployment focused on our growth markets. Furthermore, HOCHTIEF's solid balance sheet, strong cash flow generation and increasing revenue profile supports the Group's strategic expansion in these high-return areas as well as the remuneration of shareholders.

2025 was a very active year for strategic M&A. In January, HOCHTIEF closed the approximately EUR 400 million strategic acquisition of Dornan Engineering, the rapidly growing advanced-tech engineering business, headquartered in Ireland. This acquisition is a major milestone which is enabling the Group to accelerate Turner's European expansion strategy. We also finalized the FlatironDragados transaction creating the second-largest civil engineering and construction player in North America with an unparalleled track record in the delivery of large infrastructure projects with HOCHTIEF holding a 38.2% equity-consolidated stake in the new business.

During the year, we strengthened our position in high-quality concessions through an EUR 80 million participation in Abertis' EUR 400 million capital raise to support its acquisition of the A-63 toll road in France— extending portfolio duration and enhancing exposure to stable infrastructure assets.

As part of the expanded agreement mentioned earlier with Vulcan Energy, HOCHTIEF agreed in December to a cornerstone investment in Vulcan which included a EUR 130 million in Vulcan shares to become the largest shareholder. The move is aligned with HOCHTIEF's strategy to expand across the critical minerals and energy transition value chain, building an integrated presence in investment, extraction, processing, and infrastructure.

CIMIC announced the formation of a strategic partnership with Sojitz Corporation, under which the Japanese company will acquire a 50% equity interest in UGL's transport business. The transaction values UGL Transport at approximately AUD 800 million (100% basis), with CIMIC realising cash proceeds of approximately AUD 500 million.

Our capital deployment remains focused on scalable, high-return equity investment opportunities, to increase our presence in the value chain of our strategic growth markets and PPPs. Group-wide cooperation and synergies are critical to delivering on this strategy. Over the last three years we have committed EUR 600m of equity investments in strategic growth markets including an initial investment in our Edge DC platform as well as the acquisition in 2025 of 50% of the cloud services provider Yorizon, where we now own 100% and see enormous growth potential.

HOCHTIEF's very positive trajectory is made possible by the commitment and determination of our people to achieve our strategic goals. Our talent management is critical to create the teams which drive the business forward and we are proud to have had a 2025 intake of 4,500 engineers and technical employees.

This is in parallel to our focus on innovation and developing in-house know-how. We are optimizing our core tech platforms and systems as well as supporting our talent management, AI and digital systems, transforming how we work and enabling the Group to deliver innovative, efficient and smarter solutions for our clients. Our shared expertise, talent mobility, and a collaborative culture enable HOCHTIEF to operate as one unified global organization, strengthening the quality, consistency, and impact of its work. Together, we look to the future with confidence and dynamism.

At the end of June, HOCHTIEF announced that Chief Financial Officer Peter Sassenfeld was retiring. I would like to thank Peter Sassenfeld, who has been the Group CFO since 2011, for his dedication during an extraordinarily successful period for the company. The Supervisory Board named Christa Andresky as a new member of HOCHTIEF's Executive Board and the new Group CFO. I would like to congratulate Christa on her appointment and her continuing role as Chief Financial Officer at Turner, where she already worked closely with Peter Sassenfeld and the HOCHTIEF finance team and has overseen the outstanding performance of our North American-based company.

Outlook
HOCHTIEF enters 2026 with a strong financial foundation and uniquely positioned as a global end-to-end provider of infrastructure solutions across high-growth sectors (including AI-digital and tech, energy transition, defense and critical minerals), supported by our leadership in core markets.

The group's operational net profit guidance for FY2026 of EUR 950-1,025 million, subject to market conditions, envisages another year of strong growth at HOCHTIEF and corresponds to an increase of 20-30% year on year (2025: EUR 789 million).

HOCHTIEF is embracing the future by developing its strategic presence in its growth markets. Our strong and expanding presence in these interconnected sectors is a key competitive advantage and underpins our long-term growth strategy. Combined with our strong balance sheet and backed by disciplined cash management, we have created the necessary conditions to pursue further growth opportunities and deliver value for all stakeholders.

Yours,

Juan Santamaría Cases

Executive Board

Juan Santamaría Cases, Chairman of the Executive Board

Juan Santamaría Cases leads the company since July 2022. Juan Santamaría Cases has been a member of the ACS Group for more than 20 years.

He began his career at ACS in 2002 after graduating as a Civil Engineer from the Universidad Politécnica de Madrid. Between 2002 and 2006, he held different positions at Iridium and Dragados as Engineer and Project Director. Following the function of CEO at ACS Infrastructure in the U.S. and Canada from 2006 to 2013, he was President and CEO at Iridium between 2013 and 2015. From August 2015 to January 2017, he worked as Executive Manager for CPB in Australia and, in 2017, he was appointed CEO of the Industrial and Services Company UGL. From September 2017 to February 2020, he was Managing Director of CPB Contractors and Leighton, with operations in Australia, New Zealand and Asia.

He served as CEO of CIMIC from February 2020 until May 2022 and as Executive Chairman of CIMIC since November 2020.

He was appointed CEO at ACS Group in May 2022, CEO of HOCHTIEF Aktiengesellschaft in July 2022 and Chairman of Abertis in March 2023.

Christa Andresky, Chief Financial Officer,

Christa Andresky has been a member of the Executive Board since June 23, 2025 and Chief Financial Officer of HOCHTIEF Aktiengesellschaft since July 2025. She is responsible for the corporate departments Controlling and Risk Management, Finance, Capital Markets Strategy/Investor Relations, Accounting and Tax, and Insurance.

She has been with the HOCHTIEF Group since 2013. She started as Vice President and Controller at Turner Construction Company and expanded her leadership position with a promotion to Senior Vice President in 2017. In 2021, she was named Turner's Executive Vice President and Chief Financial Officer, a position she continues to hold.

Christa Andresky began her career at KPMG as a financial auditor and is a Certified Public Accountant with over 25 years of professional experience with an undergraduate degree in Finance and Accounting from the University of South Florida. Prior to joining Turner, Christa Andresky held various positions at Harman International, Inc. from Internal Audit to Vice President and Corporate Controller.

Ángel Muriel Bernal

Ángel Muriel Bernal has been a member of the Executive Board and Chief Operating Officer (COO) of HOCHTIEF Aktiengesellschaft in Essen since April 2023. He is responsible for the development of new business segments, the bidding and contract strategy as well as risk management, and is in charge of the Corporate Department Development and Mergers and Acquisition.

He has a PhD in Applied Economy from Malaga University.

Ángel Muriel joined the ACS Group in 1995 working on Corporate level and participating in different projects of Infrastructure and telecom. From 2002 to 2006, he was the CFO of Iridium in Chile, from 2006 until 2011 he worked as the CFO of ACS Infrastructure Development Inc. in the U.S. In 2011, Ángel Muriel was appointed CFO of Iridium Concesiones de Infraestructuras, S.A., in Madrid, Spain.

In 2012, he was appointed Head of Corporate Mergers and Acquisitions at HOCHTIEF, in Essen, Germany. In April 2014, Ángel Muriel joined the CIMIC Group Limited, in Sydney, Australia, as Chief Development Officer and Managing Director of Pacific Partnerships. He was also a Member of the Board of Directors of various companies of the CIMIC Group. In addition to these roles, from June 2015 to May 2017, Ángel Muriel was CIMIC Group's Chief Financial Officer. He was the Team Manager of the takeover bid, of Abertis, and is a Member of Abertis HoldCo Board of Directors.

Since May 2017, Ángel Muriel has been Deputy General Manager to the CEO at the ACS Group Headquarters in Madrid, Spain.

Martina Steffen

Martina Steffen has been a member of the Executive Board and Chief Human Resources Officer of HOCHTIEF Aktiengesellschaft in Essen since September 2021. She is responsible for Human Resources at the Group and as Chief Sustainability Officer for ESG matters, as well as for the Corporate Department IT. She is also in charge of the field of data protection.

Since 1989, Martina Steffen has worked in different positions for HOCHTIEF. Since August 2009, she managed the Corporate Department Human Resources for HOCHTIEF Aktiengesellschaft. In May 2021 she also took on the task of Chief Sustainability Officer for the HOCHTIEF Group and since October 2021 also was a member of the Executive Board and Labor Director of HOCHTIEF Solutions AG. Before that, she worked in various functions in IT and Human Resources at the HOCHTIEF Group. Martina Steffen is a qualified data processing expert and has a degree in Economics and IT (Administration and Economic Academy—VWA).

Explanatory report by the Executive Board of HOCHTIEF Aktiengesellschaft pursuant to Section 176 (1) of the German Stock Corporations Act (AktG) on the disclosures pursuant to Sections 289a and 315a of the German Commercial Code (HGB) as of the balance sheet date December 31, 2025.

The Executive Board provides the following explanatory notes on disclosures provided in the combined Group and HOCHTIEF Aktiengesellschaft Management Report and required under Sections 289a and 315a of the German Commercial Code:

Our disclosures relate to the situation in fiscal year 2025 up to the time the combined Management Report was prepared. The disclosures consist of information on the Company's subscribed capital, on restrictions on the transfer of securities, direct and indirect holdings exceeding 10% of voting rights, statutory rules, and rules contained in the Company's Articles of Association about the appointment and replacement of Executive Board members as well as about amendment of the Articles of Association, powers of the Company's Executive Board including, in particular, any powers in relation to the issuing or buying back of shares, and any significant agreements to which the Company is a party that are conditional upon a change of control of the Company following a takeover bid.

The structure of the Company's subscribed capital and rights attaching to no-par-value bearer shares in the Company are determined, among other things, by the Company's Articles of Association. The shareholding held by ACS, Actividades de Construcción y Servicios, S.A., is known from the published voting rights notification of November 13, 2023.

Restrictions on voting rights attaching to those shares may result from the provisions of the German Stock Corporations Act (AktG). For example, there are circumstances in which shareholders are prohibited from voting (Section 136 AktG). The Company also has no voting rights with regard to treasury stock (Section 71b AktG). With one exception, no agreements are known to us that may result in restrictions on voting rights or on the transfer of securities. Insofar as the Company has transferred securities to Executive Board members for the purpose of settling their variable compensation entitlements, these securities are subject to a two-year or three-year lock-up period. The information in accordance with Section 289a Sentence 1 No. 3 and Section 315a Sentence 1 No. 3 of the German Commercial Code on direct or indirect shareholdings exceeding 10% of voting rights is included in the Notes to the (Consolidated) Financial Statements. The information provided on appointment and replacement of Executive Board members conforms to the substance of the German Stock Corporations Act and the Company's Articles of Association, as does the information on amendment of the Articles of Association.

The Executive Board's powers in relation to the issuing or buying back of shares are based in their entirety on authorizations granted by resolution of the General Shareholders' Meeting in 2022 and 2023 relating to conditional and authorized capital as well as other matters, including the authorization to repurchase and utilize the Company's own shares. The information provided on these powers conforms to the authorizations granted by resolution of the General Shareholders' Meeting.

Among others, HOCHTIEF Aktiengesellschaft has entered into loan and financing agreements that comprise change-of-control clauses with right of termination. If the lenders would exercise their right of termination in case of such change of control, the corresponding borrowing needs of HOCHTIEF Aktiengesellschaft and the HOCHTIEF Group would have to be met by other means.

By way of an additional disclosure for informational purposes, in supplement to the mandatory disclosures under the stated sections of the German Commercial Code, other Group companies are party to further agreements that are conditional upon a change of control. The following is an abridged and non-exhaustive presentation:

In the PPP segment, project contracts frequently accord the client substantial rights that make it difficult to effect a change of ownership structure in the project company.

The remaining disclosures required under Sections 289a and 315a of the German Commercial Code relate to circumstances that do not apply to HOCHTIEF Aktiengesellschaft. We do not therefore cover these points in detail in the combined Group and HOCHTIEF Aktiengesellschaft Management Report. There are no limitations on voting rights, no restrictions on the exercise of voting rights attached to employee shares, no agreements between the Company and members of the Executive Board or the Company's employees providing for compensation in the event of a takeover bid, and no securities carrying special rights with regard to control of the Company.

Essen, February 2026

HOCHTIEF on the capital markets

Performance of HOCHTIEF shares

HOCHTIEF shares delivered an outstanding performance for shareholders in 2025 with the share price ending the year 160% higher compared with the end of 2024 at EUR 337.00. Including the dividend of EUR 5.23 per share paid out during 2025, the total shareholder return even stood at 164% for 2025. HOCHTIEF shares also very significantly outperformed all German as well as the European construction sector indices, ending the year amongst the very top performers in each index. The outperformance was particularly pronounced from July 2025 when the stock market started to take a more constructive “stronger-for-longer” stance on investments related to artificial intelligence and cloud data center infra-structure. This was further reinforced by HOCHTIEF Group’s half-year and nine-months results reporting that included strong profit and order intake growth, including an intra-year operational net profit guidance upgrade, with a robust cash flow development. The equity research analysts covering HOCHTIEF increasingly acknowledged the strength of the Group’s business model during the year. Furthermore, HOCHTIEF shares were added to the MSCI Germany index (part of MSCI World indices) in November which also underpinned a strong share price development. The EUR 500bn federal infrastructure investment plan announced by the German government in March was also a positive factor, with HOCHTIEF being a large and reputable infrastructure construction firm in the country.

European stock market development

European stocks had a very positive performance during 2025. The DAX index increased by 23% (+19% in 2024), the MDAX increased by 20% (-6% in 2024) and the European sector index STOXX Europe 600 Construction and Materials rose by 22% (+5% in 2024)

This positive performance was primarily achieved during the first half of the year, whereas the second-half of 2025 showed a more stable development. The year started off strongly driven by solid corporate earnings as well as supportive global macroeconomic data and a constructive interest rate outlook. In early March, the German federal government took a major decision by launching a comprehensive 12-year EUR 500 billion infrastructure investment plan. This initiative is aimed at revitalizing transportation networks, bolster digital infrastructure, and expand renewable energy projects. Following the announcement the German stock market showed particular strength as investor interest accelerated anticipating a significant multi-year economic boost from the implementation of higher public investment levels. During April, a heightened uncertainty on the global economic outlook around Liberation Day tariff announcement (April 2, 2025) led to a period of higher volatility that subsequently dissipated. The second half of 2025 saw a more stable stock market performance with a further improvement in artificial intelligence sentiment while economic data, interest rate expectations and geopolitics provided no clear direction.

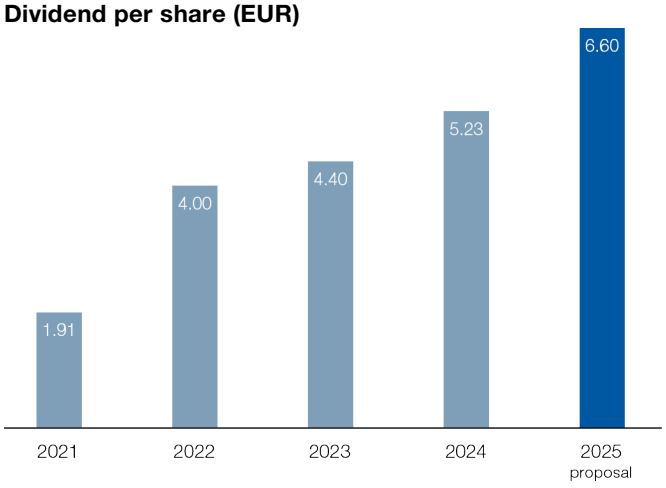
Shareholder remuneration

The proposed dividend for FY 2025 of EUR 6.60 per share represents a 65% payout on the operational net profit for the year—and corresponds to an increase of 26% year on year. Looking forward, shareholder remuneration will remain a management priority.

Dividend per share (EUR)



Shareholder structure

HOCHTIEF's total shares in issue remained unchanged at 77.7 million shares during 2025. On November 14, 2023, our main shareholder ACS announced in its latest public voting rights announcement that its stake has increased to 75.7% or 78.2% adjusted for treasury stock. ACS informed HOCHTIEF on November 11, 2024 that the shareholding in HOCHTIEF had been increased to more than 80% (adjusted for treasury stock). HOCHTIEF holds 3.2% or 2,469,695 treasury shares at year-end (2,480,121 at the end of 2024).

Analysts

The analyst community continues to recognize HOCHTIEF's strong and diversified market position coupled with significant growth opportunities in the AI, digital and tech market as well as in other strategic growth verticals the Group is pursuing. The analysts' average target price rose substantially by 129% from EUR 124 to EUR 284 per share during the year. This was driven by a strong delivery on the Company's strategy, the upgraded guidance for 2025 and a positive outlook for 2026 and beyond. At the end of the 2025, the average analyst recommendation for HOCHTIEF shares was hold, after the extraordinarily strong performance of the shares during the twelve-month period.

Latest ratings and the average target price of our analysts are available on our website (www.hochtief.com/investor-relations/hochtief-share).

Capital markets communication

Transparent and timely communication with the capital market is a key priority for HOCHTIEF management and our Capital Markets Strategy/Investor Relations department. During 2025, we participated in a series of international investor conferences, conducted selective roadshows and regularly presented our quarterly results to the market via conference calls. Our Investor Relations website features all published results documents as well as other relevant information for shareholders. Furthermore, contact details are provided for any bilateral information request by existing and potential future shareholders.

HOCHTIEF recognized for strong sustainability performance

HOCHTIEF has been included in the renowned Dow Jones Sustainability Indices since 2006. This recognizes our achievements in the areas of economic/governance, environment, and social issues. The company has achieved top rankings in all dimensions of sustainability—environmental, social, and governance and economic. In 2025, HOCHTIEF has received the "AAA" rating from MSCI for the third time in a row. This is the highest possible score and is awarded to companies that demonstrate exemplary management of ESG. HOCHTIEF was awarded "Prime" status by the rating agency ISS in 2025. Once again in 2025, HOCHTIEF was recognized for its contribution to climate protection in the CDP Climate ranking. In the Water Security category, the Group achieved "A-", and "B" in the Forest category. In addition, HOCHTIEF was successfully listed in the reporting year in the following ratings or evaluated positively for its ESG performance: Sustainalytics (ESG Risk Rating of 26.4), FTSE4Good ESG rating (Score 3.5), and EcoVadis (gold medal).

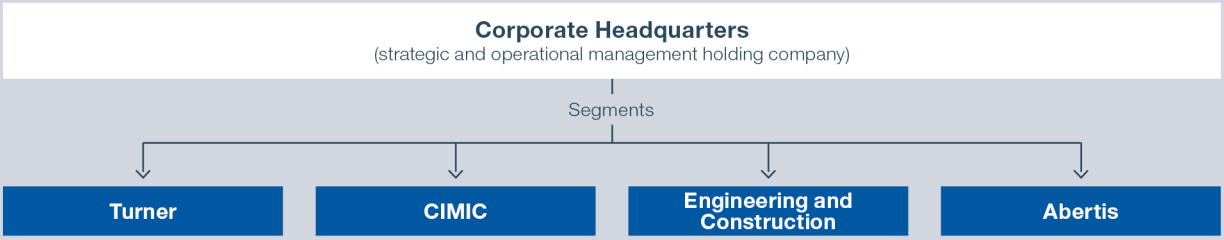
Group Structure and Business Activities, Business Model and Management System

Group Structure 2025



Group structure 2025

The organizational structure of HOCHTIEF Aktiengesellschaft is based on the management model. The operating companies are assigned to the three segments Turner, CIMIC, and Engineering and Construction. The segmentation is based on internal reporting.

The Group structure provides visibility on the performance of the individual operating companies within the Group, which provide integrated solutions tailored to a distinct market for which they hold leading positions. As part of the ACS Group, HOCHTIEF is one of the companies with the highest degree of internationalization in the construction industry and generates around 97% of its output outside of Germany.

The Group is managed and controlled by HOCHTIEF Aktiengesellschaft, the strategic and operational management holding company domiciled in Essen, Germany (the “holding company”). Responsibility for the strategic, organizational, and operational development of the Group as a whole lies with the Executive Board and the Group corporate departments (control level). The holding company encompasses the following departments: Corporate Governance (Corporate Compliance, Corporate Department Legal), Corporate Auditing, Corporate Department Human Resources, Corporate Department IT, Corporate Development and Mergers & Acquisitions, Corporate Communications, Corporate Department Sustainability, Corporate Controlling and Risk Management, Corporate Finance, Corporate Department Strategy, Corporate Department Capital Markets Strategy/Investor Relations, Corporate Accounting and Tax, and Corporate Department Insurance.

Business activities and business model of the HOCHTIEF Group[1]

HOCHTIEF is an engineering-led global provider of end-to-end infrastructure solutions with leading positions in North America, Australia, and Europe, as well as in the markets for digital infrastructure and advanced technology, energy transition, defense, and sustainable infrastructure.

We address a wide group of industries with our services, including construction management for non-residential buildings, construction of transportation, social, industrial and supply infrastructure, infrastructure and industrial maintenance services, toll road operation as well as services for critical minerals and natural resources projects. HOCHTIEF delivers its services drawing on long-standing experience in development, financing, construction, and operation. With this capability portfolio and global footprint, the Group aims to strategically strengthen the balanced business profile.

[1] The content described here also serves as evidence of compliance with the disclosure requirements pursuant to ESRS 2 SBM-1 40 a i as well as 42 a-b.

Each of our projects is one of a kind and hence calls for tailor-made solutions. In line with our guiding principles, we work to achieve this with a high level of innovation and quality and in accordance with our sustainability strategy.

The Group's subsidiaries are successfully positioned in their markets, as shown by top rankings such as that of the Engineering News-Record. By cooperating closely, the operating companies and corporate departments within the HOCHTIEF Group ensure a continuous global transfer of knowledge Group-wide for the benefit of our stakeholders.

HOCHTIEF generates a high purchasing volume for materials and subcontractor services: In the reporting year, HOCHTIEF spent EUR 28.7 billion, which is equivalent to 75% of Group work done. We select our subcontractors, suppliers, and service providers on the basis of transparent criteria and binding processes. In the reporting year, approximately 97% of the contractual partners who are relevant for our core business were prequalified. We worked with approximately 44,570 subcontractors and suppliers across the Group, of whom we defined 2,652 as material. Approximately 67% of the procurement volume was transacted with material suppliers and subcontractors. Our joint work is based on high standards, notably through acceptance of the conditions laid down in our Code of Conduct for Business Partners. We also attach importance to engaging with other partners involved in construction projects as well as with our stakeholders, both as part of our contracting work and in our sustainability activities.

Management system at HOCHTIEF and key performance indicators

The HOCHTIEF Group is managed from the holding company by the Executive Board and the corporate departments. Together with the segments and their main subsidiaries, these assess markets, opportunities as well as risks and—based on the outcome of this assessment—determine targets and strategic directions for the segments and subsidiaries. Operational management is generally the responsibility of the Group companies, with local management deciding matters such as which projects to pursue. Constituting an exception to this general rule are, for instance, very large or strategically important projects; here, the projects are pursued in close consultation with the Executive Board. Operational management must at all times adhere to the currently applicable Group requirements and guidelines. For example, major investment projects are subject to approval by the Group. All of this takes place under a Group-wide internal control system (ICS) overseen by Internal Auditing and compliance[1] regulations.

Once annually, a budget based on uniform Group-wide standards and guidelines for the budgeting Group companies is prepared. The budgeting includes the budget figures for the upcoming year and the two years beyond. Presented to the Supervisory Board by the Executive Board, it forms the basis for the subsequently communicated capital market guidance for key performance indicators. The Executive Board of HOCHTIEF Aktiengesellschaft consults regularly with the top management of the subsidiaries on current business performance, selected financial key performance indicators, opportunities and risks, individual projects as well as strategic and sustainability initiatives. A management committee structure has been established for this purpose. The established management committees are a forum for coordination between the Executive Board—supported by the heads of key corporate departments—and the management teams at the main Group companies. Meetings are generally held on a quarterly basis to explain and discuss current and strategic developments as well as to agree upon requisite action to be taken. In addition, any control measures are taken in the event that business performance diverges significantly from the budgeted targets communicated to the capital market.

[1] You can find the current Declaration on Corporate Governance pursuant to Section 289f and Section 315d of the German Commercial Code (HGB) at: www.hochtief.com/declaration-on-corporate-governance-2026. The Declaration is not part of the statutory audit of the annual financial statements and consolidated financial statements in accordance with Section 317 of the German Commercial Code.

The most important key performance indicators used for management of the HOCHTIEF Group are as follows; the financial key performance indicators are those which best reflect our focus on cash-backed profits, while we manage net cash/net debt as a function of capital allocation:

Financial performance indicators
- Net cash/net debt
- Operational net profit

Non-financial performance indicator
- Lost time injury frequency rate (LTIFR)

The LTIFR[1] is HOCHTIEF's key non-financial performance indicator from the area of occupational safety. It measures the frequency of work-related accidents resulting in lost work time and serves as a key indicator of health and safety standards in our business activities. The indicator underscores the high importance HOCHTIEF attaches to occupational health and safety as a central component of responsible and successful corporate management.

In fiscal 2025, the LTIFR was 0.71, almost unchanged from the previous year (0.66). This stable result confirms our ongoing efforts to work with our partners to ensure a safe working environment for all employees. Our focus is on behavior-based occupational safety.

[1] The LTIFR, In line with International Labour Organization (ILO) definitions, comprises the number of accidents involving at least one lost day per million hours worked. At HOCHTIEF, fatal occupational accidents are included in the LTIFR if the fatality does not occur on the day of the accident. The development of the LTIFR at HOCHTIEF is reported to the Executive Board on a quarterly basis.

Global presence

HOCHTIEF is focused on developed markets. This map shows a selection of our operating companies and their geographic spread of activity according to the 2025 Group structure.

Turner[1]

- **Turner** (USA, Canada)
- **Dornan** (Ireland)
- **Clark Builders** (Canada)

CIMIC[2]

- **CIMIC** (Australia)
- **CPB Contractors** (Australia, New Zealand, Papua New Guinea)
- **UGL** (Australia, New Zealand)
- **Pacific Partnerships** (Australia, New Zealand)
- **Leighton Asia** (Hong Kong, India, Indonesia, Macao, Malaysia, Philippines, Singapore)
- **Broad Construction** (Australia)
- **Sedgman** (Australia, Canada)
- **EIC Activities** (Australia)
- **Thiess** (Australia, Canada, Chile, India, Indonesia, Mongolia, USA)

Engineering and Construction[1, 2]

- **HOCHTIEF Solutions** (Germany)
- **HOCHTIEF Infrastructure** (Austria, Czech Republic, Denmark, Germany, Netherlands, Poland, Slovakia, Sweden, UK)
- **HOCHTIEF Engineering** (Germany, Switzerland)
- **HOCHTIEF PPP Solutions** (Germany, Greece, Ireland, Netherlands, UK)
- **FlatironDragados** (USA, Canada)
- **SPC Construction** (USA)

Abertis

- **Abertis Infraestructuras, S.A.** (Argentina, Brazil, Canada, Chile, Croatia, France, Hungary, India, Ireland, Italy, Mexico, Puerto Rico, Spain, UK, USA)

The companies featured on the map by way of example illustrate HOCHTIEF's international lineup. Activities are carried out through branches, offices or separate companies. For more information on the corporate segments, turn to the segment reporting. Alongside HOCHTIEF Aktiengesellschaft, the consolidated financial statements take in 475 fully consolidated companies, 63 equity-accounted companies, and 132 joint operations included proportionately. This organizational presentation goes together with legal information given in the list of shareholdings. For further information, please see the Notes to the Consolidated Financial Statements in this Report.

Goals and strategies

Creating sustainable value for all stakeholders

HOCHTIEF is a global provider of engineering-led, end-to-end, infrastructure solutions across North America, Australia and Europe, holding leading positions in structurally attractive growth markets. These incluce the AI-driven Digital and Technology sector as well as the Energy, Defense, and Critical Minerals markets supported by the Group's long-standing, local presence in core infrastructure markets.

HOCHTIEF's strategy is focused on capturing growth opportunities while increasing its share in the value chains. This is achieved through disciplined capital deployment, selective equity investments, the expansion of operations and maintenance capabilities, and the continued strengthening of HOCHTIEF'S engineering-led value proposition. Together, these initiatives support margin expansion and a more resilient, de-risked financial profile.

HOCHTIEF combines the scale of its global footprint with the strength of its local operating companies. By leveraging shared digital platforms, procurement networks, and design-engineering capabilities across Turner, CIMIC, and Engineering and Construction, the Group delivers global expertise with local execution. This integrated operating model enhances delivery capability, drives efficiency, and supports long-term value creation.

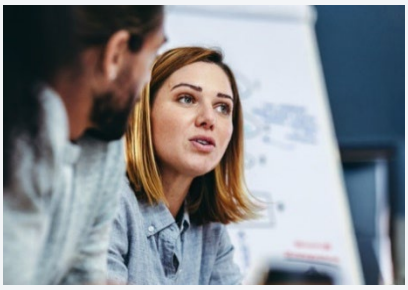
A key enabler of the HOCHTIEF strategy is the accelerating adoption of Artificial Intelligence and digital solutions, both developed in-house and sourced externally. These technologies are enhancing safety, productivity, and decision-making across the organization. Autonomous drones and AI-powered image analysis improve site safety and planning, while digital tracking platforms increase real-time visibility into project progress. Custom GPT tools support daily operations, and the Production Control System standardizes delivery processes, reduces operational complexity, and lowers execution risk.

HOCHTIEF's corporate strategy is centered on five priorities:

1. Driving top-line growth by expanding our value proposition and capturing infrastructure demand driven by long-term sector megatrends.
2. Expanding margins through the delivery of higher-value services, reinforced engineering capabilities and integrated supply chains and systems.
3. Advancing operational integration by simplifying the corporate structure and transitioning into a more technology-enabled, efficient organization with a lower cost base.
4. Enhancing cash flow stability and sustainability through continued progress towards de-risked contracting models.
5. Generating long-term value creation and increased dividends to drive shareholder remuneration.

HOCHTIEF Mission Statement[1]

HOCHTIEF delivers essential infrastructure that supports prosperity, integrating global scale and local expertise across the full project lifecycle to provide resilient, secure, and future-ready outcomes for businesses, economies, and communities.



Global scale, local agility

HOCHTIEF combines the scale and reach of a global leader with the technical expertise, agility, and insight of deeply rooted local teams.

The Group operates across the world's largest and most dynamic markets, bringing global resources, capabilities, and expertise to every project and program. The insight and agility of local teams reflect a deep understanding of regional and global market environments and a strong connection to shared knowledge and expertise across the Group. HOCHTIEF anticipates emerging needs, adapts solutions to local contexts, and delivers with precision.

Shared expertise, talent mobility, and a collaborative culture enable HOCHTIEF to operate as one unified global organization, strengthening the quality, consistency, and impact of its work.

Lifecycle partner

HOCHTIEF creates enduring value across the full infrastructure lifecycle as an investor, developer, deliverer, and operator.

Value at every stage. HOCHTIEF provides value at each stage of infrastructure development, from early concept through delivery, operations, and long-term performance.

Early engagement, better outcomes. HOCHTIEF engages with clients from the earliest project stages, shaping concepts, evaluating options, and enabling clear and confident planning.

Strategic investment for lasting impact. The Group strategically invests in high-demand infrastructure, amplifying impact, maximizing returns, and creating platforms for resilient, long-term value.

Integrated capability, global execution. HOCHTIEF combines the capabilities to invest, develop, plan, and deliver projects with multidisciplinary engineering expertise and the execution strength of its global network.

Performance over the long term. By supporting the full lifecycle, HOCHTIEF enhances performance, mitigates risk, and generates long-term value for the people, businesses, and communities served through its infrastructure projects.

Advancing tomorrow's infrastructure

HOCHTIEF takes an integrated approach to delivering future-defining infrastructure that strengthens communities and drives progress. The Group addresses society's evolving needs with agility, expertise, and scale.

HOCHTIEF's work anchors the essential systems that people, businesses, and societies rely on every day. The Group delivers assets that enable modern life — including healthcare, education, and advanced manufacturing facilities, as well as the digital infrastructure powering the global economy.

Beyond commercial and social infrastructure, HOCHTIEF contributes to community resilience through mission-critical projects for defense, security, and emergency response agencies. The Group engineers the transport and energy networks required for resilient and sustainable growth, forming the backbone of regional development and connectivity.

HOCHTIEF brings extensive expertise in managing complex engineering programs that support the extraction, processing, and logistics of critical minerals essential to advanced manufacturing and technology. The Group offers integrated capabilities and experience across a broad range of strategic infrastructure segments, including digital and advanced technology, security, energy, critical minerals and industrial resources, and core civil and urban infrastructure.

[1] The content of this page is not part of the statutory audit of the annual financial statements and consolidated financial statement in accordance with Section 317 of the German Commercial Code and thus unaudited.

As a consequence of the Group´s strategic delivery, HOCHTIEF has achieved leading positions in several high-growth sectors.

We command a strong competitive position in the **AI, digital and tech sector**. After the exponential surge we've seen over the last two years, growth in the global **data center** market remains extremely strong. Driven by soaring demand for cloud services and Artificial Intelligence, data center and compute capex in 2025 is expected to have reached USD 600 billion, double the 2023 level. Looking forward, we expect global demand for data centers to four-fold by 2035, boosted by the growth of generative AI and further cloud migration.

The Group is also advancing in the semiconductors area as strong demand for AI and increasing digitalization drive investment levels with double-digit growth expectations going forward. Together with the reshoring trend, this is producing a rapid increase in semiconductor-related opportunities.

As part of the strategy to expand the Group's presence in the entire AI ecosystem, HOCHTIEF aims to establish a pan-European network of sustainable **edge data centers**. In September we announced the inauguration, near Essen, of the first YEXIO-branded edge data center developed, owned and operated by HOCHTIEF, a major milestone for the Group's data center strategy. The previously created company Yorizon will operate HOCHTIEF's edge data center network with innovative cloud computing solutions that support clients' digital sovereignty.

Energy is another strategic growth market for HOCHTIEF with substantially rising demand and investment driven by the global energy and supply security needs.

The Group is strategically focused on building the infrastructure that underpins a low-carbon future – from electricity generation and storage to transmission and advanced technology. The company is embarked in projects such as high-voltage transmission upgrades, regional electricity fortification, and the delivery of firming assets that strengthen the grid.

HOCHTIEF has several decades of experience, designing and building nuclear power plants and facilities across the world for renowned global energy companies like RWE. We deliver end-to-end services across the nuclear market and are well-positioned to support the deployment of best-in-class small modular reactor technologies. As these technologies evolve and emerge, we are leveraging our global project and engineering capabilities for new-build, SMRs, storage and dismantling, in an industry which could see over EUR 500 billion in investment in Europe by 2050.

In renewables, which represent an ever more important energy source, battery energy storage systems are becoming a crucial element to balance electricity networks. Global BESS capacity is expected to rise by 67% in 2025 to 617 gigawatt hours and to ten-fold by 2035 and we are a key player in this market segment, particularly in Australia.

Investment in transmission and distribution networks is also set to grow strongly in coming years as renewable power supplies an increasing proportion of electricity generation. Overall energy demand is being boosted by the exponential growth in data centers, electric vehicle usage and other megatrends. The Group is positioning itself for future growth by leveraging its long-standing local presence as a provider of infrastructure solutions, as well as its access to the Group's network in Australia, the UK, and other markets, such as Germany.

Global demand for **critical minerals and natural resources** is set to increase significantly as a consequence of the exponential growth of clean energy technologies, digital infrastructure and defense investments. HOCHTIEF has developed a unique position in critical minerals globally, primarily through its Australian-based companies Sedgman (integrated minerals processing solutions) and Thiess (global mining services), supported by a series of bolt-on acquisitions, and we are growing our geographical footprint and scale with over 140 critical minerals engineering projects globally.

HOCHTIEF, through Sedgman, is also expanding its European footprint in critical minerals given strong growth prospects. For example, global Lithium demand is expected to five-fold by the end of the decade pushing the market into deficit by the 2030s. In Germany, we have been appointed as the Engineering, Procurement and Construction Management (EPCM) contractor for **Vulcan Energy's** Lionheart project. The target is to build one of Europe's largest Lithium extraction plants. The company's integrated Lithium and renewable energy project will allow it to deliver a local source of sustainable lithium for the European EV battery industry, enough for an initial 500,000 electric vehicles per annum. The awarding of 'EU Strategic Project' status under the 'Critical Raw Materials Act' highlights its transformative potential for Europe's clean energy future and lithium independence. Sedgman has also won a contract to provide the feasibility study and front-end engineering design work for a major lithium project in France and we are also currently working on or have worked on a number of other lithium projects and studies this year in Portugal, Brazil, Australia, and Canada.

Investment in **defense** infrastructure is expected to substantially increase globally. For example, in Europe, major multi-year defense investment plans, including in Germany, present substantial opportunities in defense-related capital works and potentially via the PPP model. And in Australia the government plans AUD 765 billion in Defense spending over the next decade.

HOCHTIEF sees this sector as strategically attractive due to the synergies with the Group's leading position in civil works, its engineering capabilities and its sector presence in Europe, the U.S., and Australia. Furthermore, and supported by our key security credentials, the visibility afforded by multi-year public investment plans supports the Group ´s long term strategy of sustainable value creation. We deliver projects for ministries of defense, police agencies and border authorities across our geographical footprint. At the end of the third quarter, the Group had a defense order book of more than EUR 2 billion and included work for the Royal Australian Air Force base in Queensland, defense infrastructure upgrades in South Australia, the construction of a dry dock at Pearl Harbor for the U.S navy and flood recovery work for a U.S. airforce base.

Our **core infrastructure** know-how is key for the Group's ability to fully harness the growth opportunities we have identified. These core infrastructure capabilities enable the Group to have a strong geographical footprint with local roots and to be leveraged for the growth verticals where the vast majority of the work for any infrastructure project is performed.

HOCHTIEF's more mature core infrastructure business remains a solid foundation underpinning the Group's growth strategy. Turner was again named ENR's top U.S. general contractor in 2025, holding leading positions[1] across 13 segments including healthcare, aviation, and data centers. Furthermore, the Group has been one of the global leaders in transport infrastructure and sustainable mobility for several decades and the outlook for the sector is very positive due to several infrastructure stimulus packages in key geographies. In Germany, for example, the EUR 500 billion infrastructure fund approved by the Bundestag parliament will see its first full year of deployment in 2026, and HOCHTIEF is well positioned to benefit due to the scalability of its business model and its core expertise in bridges, tunnels and rail.

In terms of our financial strategy, we target an absolute and sustainable increase in profitability with strong cash conversion in the long term, as reflected in our financial key performance indicators, enabling us to deliver on our strategy. Our near-term ambitions are reflected in the Group's guidance (see Looking ahead section). Moreover, the strategy also aims for a sustainable development which is long-term in nature. All our activities are underpinned by the precondition of safety which is reflected in our non-financial key performance indicator, i.e. the lost time injury frequency rate (LTIFR), which continues to be at a historically very good level in 2025. Our strong cash flow performance and the future fire power it will provide us with enormous value opportunities from the assets we will be creating.

[1] defined as top 5 position according to Engineering News-Record ranking, ENR Top 400 US Contractors, May 2025

The Group has established local and long-term client relationships, strong engineering, systems and logistics capabilities, leading scale and commissioning capability, and unparalleled project management experience, supported by a robust balance sheet and strong cash generation. This is the consequence of accumulated effort and resources applied in a consistent direction, underpinned by our increasing adoption and development of digital and artificial intelligence tools which also support the Group's ongoing progress in further derisking the business.

In addition, the Group has unparalleled project life-cycle expertise that is applied in greenfield public-private-partnership projects, brownfield concessions, and other equity investment opportunities in strategic growth markets.

We provide our services in selected regions, mainly in developed markets, and leverage our Group synergies. As a leading global infrastructure Group[1], HOCHTIEF today spans the entire life cycle of infrastructure projects. As a result, the Group has a balanced business profile in terms of cash flow visibility, capital intensity, and margins.

HOCHTIEF has been delivering large-scale projects and added value services for its clients for over 150 years and, as we look forward, our vision is of a sustainable future: "HOCHTIEF is building the world of tomorrow." Our business activities are based on a common corporate culture with shared values. Our integrated approach to projects fosters a culture of sustainability and collaboration among our Group companies to the benefit of all our stakeholders.

In 2024, HOCHTIEF introduced a simplified Group structure across three business lines: Integrated Solutions[2], Engineering and Construction, and Infrastructure Investment. This enhances cross-selling and operational synergies within the Group while strengthening our supply chain, global engineering network and systems, helping to achieve economies of scale. From a financial reporting perspective, we started communicating the Group's activities from the beginning of 2024 based on four new reporting segments: Turner, CIMIC, Engineering and Construction, and Abertis. This aligns the Group's reporting with our strategic and operational priorities and enhances visibility of the company's operating performance.

[1] Based on share of international sales

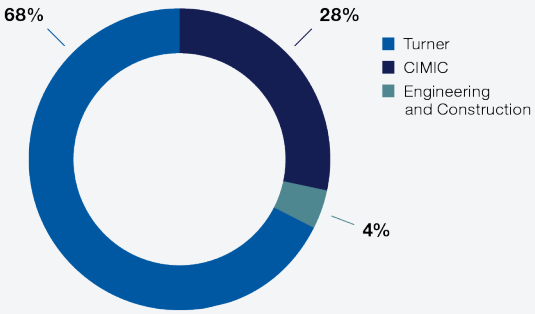
Sales by segment



Our activities at a glance

Turner

Turner, our advanced-tech building solutions company, is once again ranked No. 1 in the U.S. in general and green building in 2025, according to the ranking compiled by Engineering News-Record. This is based on the company's integrated solution approach including extensive engineering, supply chain and logistics expertise which is crucial for the delivery of large-scale projects. With its client-focused delivery model, Turner is recognized as a leader in the United States in the data center, health care, education, airports, sports and commercial office segments. At the beginning of 2025, Turner closed the acquisition of the Irish-based **Dornan** company offering advanced technology engineering services for data centers. This acquisition is accelerating Turner's strategy of expanding into the European market where a significant pipeline of advanced technology project opportunities has been identified with its existing clients.

CIMIC

CIMIC Group is an engineering-led industrial, energy, natural resources and civil infrastructure business. Its activities cover the entire lifecycle of infrastructure and resources assets—from development and investment through construction to operations and maintenance. Its operating companies include: **CPB Contractors** is one of the largest civil engineering businesses in Australia; **LAIO (Leighton Asia)** offers comprehensive construction services primarily in Hong Kong and other selected Southeast Asian countries for civil and advanced technology projects; **UGL** is one of the leading providers of industrial services for the energy, resources, and transportation sectors, as well as asset management services; **Thiess** provides comprehensive services in the natural resources sector; **Sedgman** is a provider of integrated mineral processing solutions; and **Pacific Partnerships** is a developer and investor for infrastructure, digital and energy assets.

Engineering and Construction

Our Engineering and Construction segment encompasses HOCHTIEF's activities in Europe plus our at-equity accounted interest in FlatironDragados. The Group's European engineering and construction activities, operating under the **HOCHTIEF** brand, deliver sustainable solutions in energy transition as well as digital, social, and transportation infrastructure. The primary focus is on the German, Polish, Czech, Slovakian, Austrian, UK, Scandinavian, and Dutch markets. These activities are complemented by **HOCHTIEF PPP Solutions** focusing on greenfield PPP and strategic high-growth market project developments in Europe, including investing own equity into the project companies. **FlatironDragados** is the second-largest civil engineering and construction company in North America by sales, delivering essential infrastructure. The company boasts unique experience, references, geographic reach, and engineering capabilities for large infrastructure construction projects—roads and bridges, aviation, resiliency protection, dams and reservoirs, rail and transit, water and wastewater treatment facilities, tunneling, underground projects and marine works. Since January 2025, HOCHTIEF holds a 38.2% equity-accounted interest in the company.

Abertis

Since June 2018, HOCHTIEF owns a 20% stake in **Abertis HoldCo**, the direct owner of 99.1% of Abertis Infraestructuras, S.A. (Abertis). Abertis is one of the leading international toll road operators with a portfolio of brownfield assets stretching across 15 countries, 34 concessions and around 8,000 kilometers of toll roads.

Focus on sustainable and cash-backed profitability

Achieving sustainable profits consistently backed by cash generation is a core element of our strategy, paving the way for an attractive shareholder remuneration policy as well as further strategic growth investments.

The Group delivered another strong cash flow performance in 2025. Operating cash flow pre-factoring of EUR 2.1 billion in 2025 was up around EUR 250 million year on year and compares to an already strong performance in 2024 driven by a sustained high cash conversion, including a strong working capital performance.

Given this strong performance, HOCHTIEF ended the year with a slight net debt position of EUR 97 million after significant strategic M&A net investments as well as distributing dividends worth EUR 393 million to shareholders. This financial key performance indicator hence showed a strong performance when adjusted for capital allocation decisions taken during the year.

Maximizing value creation opportunity

By fully harnessing our unique competitive position, we are increasing our presence in the value chain of our strategic growth markets. Group-wide cooperation and synergies are critical to delivering on this strategy. By accelerating the equity investment component of our strategy, we strive to maximize the value we can create not just with our engineering and construction capabilities, but also as an equity investor, as well as from the operations and maintenance angle.

Continuous focus on risk management

In all our projects, effective risk management is essential. Effective risk management requires constant improvements. That is why we work continuously to adapt and optimize our risk management processes and, in doing so, contribute to enhancing profitability. We focus on selected, attractive markets where our engineering and project management know-how coupled with the benefits of a long-term local presence provide a sound basis for executing our core activities, and we constantly evaluate market opportunities with a view to complementing our activities accordingly. As a consequence, the share of lower-risk contract types with enhanced risk-sharing mechanisms in our order backlog has increased significantly over the last seven years to around 90% compared to around 65% at the end of fiscal year 2017. In addition, various risk mitigation tools are applied to manage inflation and supply chain challenges together with our clients and partners.

Maintaining a strong balance sheet and diversification and optimization of financing instruments

Maintaining a strong balance sheet is a key element of our Group strategy and part of our commitment to our investment-grade credit rating. In addition, improving the financial structure is an ongoing objective for HOCHTIEF. Diversifying the available financing instruments as well as notably expanding short-term and long-term debt financing sources, including outside of the traditional banking market, is key to attaining that goal.

In addition to our bank financing, broad market and investor access to diverse financial instruments, including promissory note loans, private placements, and public-sector bonds, enables HOCHTIEF to secure new financing arrangements and refinance existing debt on attractive terms. This also allows HOCHTIEF to consistently implement targeted management and extension of its maturity profile as part of its long-term financial strategy.

Active and disciplined capital allocation a key priority for management

We regularly assess strategic M&A opportunities with our capital deployment focused on growth markets such as digital, energy and other infrastructure assets. HOCHTIEF´s solid balance sheet, strong cash flow generation and increasing revenue profile supports the Group‘s strategic expansion in these high-return areas as well as shareholder remuneration through dividends and share buybacks.

Capital allocation highlights in 2025 include:

- In January, HOCHTIEF closed the approximately EUR 400 million strategic acquisition of Dornan, marking a major milestone, which will enable the Group to accelerate Turner’s European expansion strategy. Headquartered in Ireland, Dornan is one of Europe’s leading mechanical and electrical engineering companies, and works in the data center, biopharma/life sciences as well as industrial and other sectors. With a strong presence in the UK, Ireland, Germany, the Netherlands, Denmark and Switzerland among others, the business achieved revenues of over EUR 1.2 billion in 2025 backed by an expanding order book. Dornan has a similar business model and risk approach to Turner and also shares with it many of the direct relationships with blue chips and hyperscalers. This strategic acquisition of a company with over 1,000 employees will allow us to further leverage the strong engineering capabilities in the areas of design, engineering, project management, commissioning, procurement and modularization. Executed by Turner, the acquisition accelerates the company’s strategy of expanding into the European AI, digital and high-tech market.

- The start of the year also saw the completion of the FlatironDragados transaction creating the second-largest civil engineering and construction player in North America with an envious track record in the delivery of large infrastructure projects. The new company has unparalleled civil infrastructure experience, credentials, geographical reach, and technical capabilities for large infrastructure projects. HOCHTIEF holds a 38.2% equity-consolidated stake in the new business.
- During the fourth quarter a EUR 400 million capital injection was approved for Abertis, with HOCHTIEF subscribing its EUR 80 million contribution, to support the growth of the international toll road operator.
- In December, the group expanded its partnership with Germany-focused Vulcan Energy, the world's first sustainable lithium and renewable energy business, and will have an end-to-end role in developing its lithium production and processing infrastructure. HOCHTIEF has agreed to an investment in Vulcan of EUR 169 million, comprising a EUR 39 million project level investment and a subscription of up to EUR 130 million in Vulcan shares, becoming a cornerstone investor. As part of the agreement, HOCHTIEF has been named as preferred supplier for the project's civil construction works and group company Sedgman has been appointed as the Engineering, Procurement and Construction Management contractor for Vulcan's Lionheart Project, delivering an end-to-end solution for the Lithium Extraction Plant and the Central Lithium Plant. The move is aligned with HOCHTIEF's strategy to expand across the critical minerals and energy transition value chain, building an integrated presence in investment, extraction, processing and infrastructure.
- Also in December, CIMIC announced the formation of a strategic partnership with Sojitz Corporation, under which the Japanese company will acquire a 50% equity interest in UGL's transport business, establishing a 50:50 joint ownership structure. The transaction values UGL Transport at approximately AUD 800 million (100% basis), with CIMIC realising cash proceeds of approximately AUD 500 million. UGL Transport is a leading integrated transport services platform operating across Australia and New Zealand, with 2025 estimated revenue of AUD 1.1 billion and a strong and stable management team. Its capabilities span rolling stock manufacturing and servicing, network management, transport operations, and advanced signalling and communications systems. The business holds long-term contracts with government authorities and tier-one operators and is well-positioned for expansion through service adjacencies and technology-led opportunities. The agreement marks a significant milestone in CIMIC's strategy to unlock value and accelerate growth across its portfolio.

Accelerating innovation by making use of digital developments

A major contributor to HOCHTIEF's strong track record in work and project delivery has been our focus on innovation, a key guiding principle of the Group. Innovation is conceptually approached from two angles. The strategic management of innovation is led by Nexplore which operates innovation, development, and research centers in the proximity of HOCHTIEF's main subsidiaries. Its focus is on the opportunities and efficiencies that digital products and solutions can bring to our businesses. Nexplore is monitoring and consolidating the integration of technologies such as digital twin and Building Information Modeling (BIM). We continue to develop BIM as a key springboard for further innovations. Additionally, project-driven innovation is executed by innovation units within our operating companies that develop new solutions based on existing and emerging requirements on specific projects or more widely in their respective business lines. Automation and prefabrication applications, for example, lead to process improvements in the supply chain. This is further supported by our dedicated engineering and technical services companies such as EIC Activities and HOCHTIEF Engineering.

We develop in-house solutions and also use state-of-the-art systems and methods provided by external suppliers to enhance overall performance. For example, Turner's SourceBlue transforms the traditional procurement process through the transparent and efficient design of complex supply chains. In addition, we are actively engaging in industry-wide R&D networks with research, science, and industry partners to drive innovation in our industry forward, with digitalization playing a crucial role in stepping up not only safety, quality, and efficiency but also sustainability. This is why innovation and digitalization are embraced within the HOCHTIEF Group as fundamental enablers to deliver on our ambitious targets laid out in the Sustainability Plan 2025.

Further enhancing our attractiveness as an employer

Our teams are paramount for HOCHTIEF, and attracting talent is essential for HOCHTIEF. To this end, we have aligned our human resources management around recruiting both young talent and experienced professionals for our company and systematically enhancing employee retention and development. Our areas of focus here include diversity in teams, an inspiring working environment as well as an extensive further education and training program. Our priorities are to attract, train and retain talent.

In the U.S., for example, Turner has been named by Forbes as one of America's Best Employers for Engineers for 2026, earning the number 1 ranking in the construction industry and a top-20 position in the United States. This marks the second straight year our company has earned this recognition. We offer engineers the chance to take on meaningful work across diverse markets ranging from healthcare and higher education to advanced technology and aviation. Our people thrive with access to structured learning, professional growth pathways, and cutting-edge artificial intelligence tools that elevate decision-making and project execution. Combined with a culture defined by inclusion and active caring, we provide an environment where engineers can contribute, grow, and make a lasting difference.

Occupational safety and health are the foundation for success in our work. We work continuously to improve occupational safety. These efforts are aided by our non-financial key performance indicator, the lost time injury frequency rate (LTIFR), which provides us with a transparent means of tracking the frequency of accidents. Reducing the LTIFR is an express goal under our Sustainability Plan.

Contributing actively to sustainable development

Implementation of the Sustainability Plan 2025 systematically continued in 2024. This comprehensive strategy spanning the three dimensions of sustainability—environmental (E), social (S), and governance (G) (ESG) as well as the topics of innovation and digital transformation—was drawn up in 2021 under the direct leadership of the Executive Board, adopted in 2022, and consistently continued in the reporting year. As the Sustainability Plan 2025 ends with the end of 2025, the further development of new sustainability targets is currently in progress with a view to assessing their implementation in 2026

Our sustainability strategy forms an integral part of the Group strategy, with which we generate value for our stakeholders and secure our long-term success. We define sustainability as a systematic approach to harmonizing economic, environmental, and social responsibility across all our business activities with the aim of securing the long-term viability of the company. Sustainability is therefore one of our strategic principles. To this end, we apply a 360-degree focus, taking in all of our business segments and operating activities, and hence also our clients. At all times, we also keep in mind the interests of other stakeholders such as suppliers, subcontractors, and residents in the vicinity of our projects.

The international ESG working groups at HOCHTIEF continued to develop their activities in the reporting year. Their progress is regularly reported to the Chief Sustainability Officer on the Executive Board, who chairs the Sustainability Core Team and reports to the Supervisory Board's Audit/Sustainability Committee. The Sustainability Committee, comprising management and board representatives from across the entire Group, met three times in 2025. HOCHTIEF's subsidiaries also have sustainability teams that monitor and promote the implementation of sustainability initiatives and measures.

Stakeholder management in the area of sustainability is primarily carried out at HOCHTIEF on a decentralized, issues-driven basis. To achieve the required targets for specific issue-related or case-related feedback, we conduct stakeholder dialogue on a thematic basis. In an ongoing exchange, the needs of a wide variety of stakeholder groups are identified and taken into account both operationally and strategically for the long term. This feedback is a key element in making sure that our selected focus areas remain both relevant and valid.

Non-financial reporting is provided in the Sustainability Statement[1], which is contained in the combined Management Report.

Business success through sustainable action[2]

As our work directly affects the environment and society, we aim to make our impact as positive as possible. We aim to prevent risks and make targeted use of opportunities. For clients, other stakeholders, and the Group alike, we aim to preserve, create, and grow value.

We do this by creating sustainable buildings and infrastructure, and by designing processes to deliver construction and services in the most environmentally and socially responsible manner possible. Innovations in products and services lead to resource-conserving solutions in our business segments. Generally, with services in our new market segments, we make a significant contribution to enabling sustainable development—for example, we are creating the conditions for the production and operation of electric vehicles by constructing battery factories.

FAST CHARGING STATION FOR ELECTRIC VEHICLES, GERMANY

The large charging station of the joint venture between HOCHTIEF PPP Solutions and EWE Go offers twelve high-performance charging points for fast charging in Oer-Erkenschwick. The project is based on a sustainable overall concept.

Markets and operating environment

HOCHTIEF Group companies hold leading positions in some of the world's biggest infrastructure markets. The outlook for the most relevant markets for the Group is described below[1]; our assessment is based on information from leading market research institutes, whose growth forecasts do not differ significantly from those of the previous year. It is important to underline that the actual Group performance will not necessarily mirror the evolution of particular markets as our operational strategies can lead to deviations from overall market trends. This is particularly the case in fragmented markets as well as in markets characterized by very large-scale projects. Therefore, we also highlight the respective segment's comparable order book development to put the market growth outlook into perspective.

The Group is reinforcing its end-to-end solutions capabilities, replicating its success achieved in the data center sector in other important growth markets—such as defense, energy (including nuclear), critical minerals and other advanced tech in the future. We expect considerable project opportunities worldwide in this area in the coming years.

Turner

Turner generates the vast majority of its sales in the non-residential building construction market in the United States.

The outlook for the market in 2026 is generally positive with data centers, Turner's largest end market, being the most dynamic (Compound Annual Growth Rate (CAGR) 2024-2029 +16%, with AI data centers showing particularly strong growth at a CAGR of +42%)[2]. Elsewhere in other sizeable Group end markets, construction starts are forecast to show another year of solid performance both in institutional (+6%) and commercial projects (+7%).[3]

Turner's order backlog grew by 34% year on year in local-currency terms during 2025 reflecting Turner's strong market position, its strategy focused on digital and advanced tech project opportunities as well as the acquisition of Dornan. The order backlog does not yet reflect Turner's ambition to expand into the European market to serve advanced technology clients.

CIMIC

CIMIC's activities are largely executed in Australia and New Zealand with an additional selective presence across Southeast Asia. The overall market outlook for CIMIC is broadly positive in its key areas of activity including infrastructure construction as well as across digital infrastructure assets, industrial, and natural resources services.

In Australia, non-residential construction spending is expected to increase by 17% in the 2025-2028 period.[4] CIMIC Energy infrastructure spending is expected to be a key driver of growth with a three-year CAGR of 19%. As new grid connections and planning approvals progress, the pace of construction across wind, solar, and transmission infrastructure is anticipated to accelerate significantly.[5] Construction spending for data centers in Australia is expected to accelerate sharply as demand for AI and cloud computing grows. Total Australian data center capacity is expected to almost double from 1.6 gigawatt in 2025 to 3.1 gigawatt in 2028, with data center construction spending expected to increase to AUD 10.8 billion in 2028.[6]

[1] The content described here also serves as evidence of compliance with the disclosure requirements pursuant to ESRS 2 SBM-1 40 a ii.

[3] Dodge Construction Network, Outlook 2026 Ebook, December 2025
[4] Macromonitor, Australian Construction Outlook Overview, December 2025. Note: Data excludes residential construction and has been adjusted for inflation.
[5] Macromonitor, Australian Construction Outlook Series, Utilities, May 2025
[6] Macromonitor, Australian Construction Outlook Series, January 2026

The construction sector in Southeast Asia is one of the largest and fastest growing globally. Growth in the region is expected to reach close to 6% in 2026 and 2027. Momentum is supported by strong public budgets, rising Foreign Direct Investment, and large pipelines in transport, energy, manufacturing, and digital infrastructure.[1] The data center demand continues to accelerate in South-East Asia, with the pipeline more than doubling to USD 102 billion since 2024.[2]

The Australian outsourced maintenance and services market continues to benefit from infrastructure investments to support population changes and aging assets. Asset owners are increasingly outsourcing infrastructure maintenance and services. Increasing exposure to extreme weather-related events further supports demand in this segment. In 2026 and 2027, this market is expected to grow over 7% and 3% respectively, with sector expansion across transport, utilities, and resources.[3]

Australia is a major producer and exporter of key commodities and remains an increasingly important global source of critical minerals. With the focus on resource supply chain resilience increasing, Australia's production and importance in the sector is likely to increase.[4] In 2026 and 2027, operations and maintenance activities in the resources sector are expected to increase by around 4% annually, partly driven by a larger asset base associated with mining and mineral processing services for commodities such as iron ore, and gold.[5]

CIMIC's order backlog grew by 6% in local-currency terms during 2025 on a comparable basis.

Engineering and Construction

In Engineering and Construction, the Group operates as a civil contractor in Europe and the U.S. as well as in building construction in Europe. Engineering and construction activities are complemented by project development activities, including public-private partnerships, data centers, and electric vehicle fast-charging networks.

The European construction market is forecasted to see a gradual recovery expanding by 2.4% in 2026 and 2.2% in 2027. The combination of improving financial conditions, long-term infrastructure programs, and sustained renovation demand should help support broad growth from 2026 onward, after a more sluggish 2025. Civil engineering remains the strongest and most stable component of the European construction cycle. After a period of growth, the sector is expected to continue expanding in 2026 driven by investment in transport and energy-transition infrastructure, with support from EU-funded programs. The German government's 12-year, EUR 500 billion infrastructure fund approved during 2025 will see its first full-year of implementation in 2026, which should support a multi-year increase in demand beyond that period in the Group's single largest European market. The non-residential building sector is accelerating in 2026, supported by major renovation activities due to energy-performance requirements and the upgrading of ageing public and private facilities.[6]

[6] Euroconstruct, 100th Euroconstruct Conference, Press Release, November 2025

The civil infrastructure construction market in the United States, the most relevant market segment for our North American Engineering and Construction company FlatironDragados (HOCHTIEF holds a 38.2% stake), is expected to see the highest real growth rates within the wider construction market at 3% in 2026 and 5% in 2027. Growth is broad based across roads, power, water, waste, and conservation markets supported by surging demand for energy, including accelerating nuclear investments, an expectation of a renewed federal funding for the Infrastructure Investment and Jobs Act, demographic trends and increasing water usage for cooling by the industrial and data center sectors, according to FMI.[1]

The Engineering and Construction order backlog grew by 18% f/x-adjusted in 2025, reflecting robust demand for transport, power, utility and social infrastructure. Market developments are continuing to see support from government stimulus packages, pent-up demand in critical infrastructure, data centers and energy infrastructure which play to the strength of both HOCHTIEF's and FlatironDragados' market positioning.

Abertis Investment

The outlook for Abertis' diverse portfolio of toll road concessions is largely a function of economic activity in key countries as well as inflation-linked tariff increases. Taking both indicators together, the prospect of further underlying revenue growth of Abertis is good. Taking these two indicators into account, further revenue growth is likely for Abertis. The acquisition of a majority stake in the A63 highway in France announced in 2025 is also expected to have a positive impact on growth.

Order Backlog Development in 2025

Continued strong growth in new orders result in a 7% increase in order backlog

HOCHTIEF saw a high level of new orders of EUR 52.6 billion in FY 2025, which corresponds to a year-on-year increase of +26%. A positive development was seen in all segments on an fx-adjusted basis, especially at Turner and Engineering and Construction. The Group is benefitting from its focus on opportunities in strategic growth markets, whose share is more than 55% of total. New orders corresponded to around 1.3x work done during the period with the Group continuing its disciplined bidding approach across all segments.

As a result of the very strong level of new orders, the order backlog rose to EUR 72.5 billion. Year on year the order backlog increased in absolute terms by EUR 4.9 billion or 7% in relative terms. On an underlying basis, i.e. adjusting for foreign exchange rate impacts and scope effects, the increase even amounts to 18% year on year. Our focus remains on developed markets and the order book remains diversified across regions and market segments. The Group continues to work on further improving its overall risk profile by increasing the focus on collaborative and lower-risk contract types with lower risk contracts now accounting for around 90% of the Group's order book.

Turner: Order backlog at new record level following a 38% increase in new orders

New orders at Turner in 2025 rose significantly, up 38% year on year, to EUR 33.6 billion, equivalent to 1.3x work done during the same period. As a result of the sustained order intake momentum, the order backlog at Turner rose by 18% year on year to EUR 37.7 billion, a new year-end record level. Adjusting for adverse foreign exchange rate variations during the period, the increase in local currency amounted to 34%.

CIMIC: Robust order backlog development on a comparable basis, and supported by solid level of new orders

New orders of EUR 12.7 billion in 2025 are on par with the prior year level, and up 3% year on year in local currency terms. New orders are equivalent to over 1.1x work done during the period. At year-end, CIMIC's order backlog stood at EUR 21.8 billion.

Engineering and Construction: Strong 38% increase in new orders drives further double-digit backlog increase

In the Engineeting and Construction segment new orders worth EUR 6.1 billion were recorded in 2025, a significant increase of 38% year on year and representing 1.4x work done during the reporting period. As a result, the segment order backlog at the end of December 2025 came out at EUR 13.0 billion, 11% higher year on year.

STRATEGIC PARTNERSHIP WITH VULCAN ENERGY

For its strategic partner Vulcan Energy, HOCHTIEF will be involved throughout the development of the infrastructure for lithium production and processing. Vulcan Energy's “Lionheart” project centers on the sustainable extraction of lithium and renewable energies, with a focus on Germany.

Business situation and performance

Summary assessment of the business situation

Group sales rose to EUR 38.2 billion in 2025, up 15% (21% when adjusting for f/x effects) on the prior year figure (EUR 33.3 billion). The HOCHTIEF Group also continued to grow its earnings significantly exceeding the previous year's figures for both nominal (EUR 902 million, +16%) and operational net profit (EUR 789 million, +26%) despite adverse foreign exchange rate impacts. The cash flow development of the last twelve months shows a continued high cash conversion with an operating cash flow of EUR 2.0 billion. In terms of order intake, HOCHTIEF benefited from several new orders in strategic growth markets such as digital & advanced technology, energy infrastructure, critical minerals and defense. Compared to the previous year, new orders therefore rose by 26% (fx-adjusted +32%) to EUR 52.6 billion. At the end of December 2025, the order backlog amounted to EUR 72.5 billion, which corresponds to an increase of 7% (+18% when adjusting for f/x effects).

HOCHTIEF continues to pursue a disciplined capital allocation approach, with the aim of delivering strong shareholder returns whilst pursuing investments to strengthen our long-term growth potential. In the third quarter of 2025, HOCHTIEF distributed around EUR 400 million in dividends – representing a 65% payout of 2024 Group operational net profit. In addition, the Group further expanded its presence in important strategic growth markets with the M&A activities initiated in the previous year and successfully completed in the 2025 financial year.

The transactions notably included the strategic acquisition of 100% of shares in Dornan Engineering, Cork, Ireland, ("Dornan") – a leading provider of advanced-tech mechanical and electrical engineering services. Acquiring Dornan will enable to accelerate Turner’s European expansion strategy by using the existing local capabilities. The transaction closed on January 7, 2025.

Furthermore, HOCHTIEF and its main shareholder ACS agreed in July 2024 to combine their North American businesses Flatiron and Dragados to create the second-largest civil engineering and construction player in the region. The combined resources will advance the Group’s growth in the North American civil market. With the closing completed on January 17, 2025, HOCHTIEF holds 38.2% of the shares in the new combined holding company Flatiron Dragados Engineering and Construction, S.L., (“FlatironDragados”) which is accounted for in the HOCHTIEF Consolidated Financial Statements using the equity method. The transfer of Flatiron to the new combined company resulted in a one-off non-cash gain before and after tax of EUR 146 million for the HOCHTIEF Group in the first quarter of 2025. In 2024, Flatiron was still accounted for as a consolidated subsidiary in the HOCHTIEF Consolidated Financial Statements, and in the HOCHTIEF Consolidated Balance Sheet as of December 31, 2024, Flatiron’s assets and liabilities were recognized as held for sale in accordance with IFRS 5. Accordingly, there are significant differences in the comparison of the HOCHTIEF Consolidated Balance Sheet and Consolidated Statement of Earnings due to the different consolidation methods for Flatiron in the comparative periods.

Last year, CIMIC Group Limited, New South Wales, Australia (”CIMIC“) acquired an additional 10% of Thiess Group Holdings Pty Ltd, New South Wales, Australia (”Thiess“) on April 23, 2024. Following this acquisition, CIMIC holds 60% of Thiess, with the result that Thiess has been included in the HOCHTIEF Consolidated Financial Statements as a consolidated subsidiary since the end of April 2024. On consolidation, all balance sheet and P&L line items are consolidated 100% in the HOCHTIEF Consolidated Financial Statements. The income attributable to Elliott from the preference dividend on its 40% shareholding is reported as a non-controlling interest in the “non-controlling interests” line item. As Thiess was still accounted for as an equity-accounted company in the HOCHTIEF Consolidated Financial Statements in the first quarter of 2024, differences arise when comparing the Consolidated Statement of Earnings for 2025 and 2024.

In December 2025, CIMIC entered into an arrangement with Sojitz Corporation, Tokyo, Japan (“Sojitz”), regarding the acquisition by Sojitz of a 50% equity interest in the UGL Transport Business, Sydney, Australia (“UGL Transport”), and entered into a joint venture arrangement. The terms of the sale agreement and contractual arrangements in force at December 31, 2025 mean that CIMIC no longer controls UGL Transport as at

December 31, 2025, but now jointly controls UGL Transport with Sojitz. As at December 31, 2025 the transaction was subject to customary conditions precedent, and the sale was formally completed on January 19, 2026. Accordingly the transaction has been recorded as a disposal of controlled entities in accordance with IFRS 10 and the recognition of an interest in a joint venture entity.

CIMIC has sold its 100% investment in Leakes Road DC Holdings Ptd Ltd, New South Wales, Australia, and its subsidiaries (“Leakes Road)” to a 50-50 joint venture of ACS and BlackRock, Inc. New York, dedicated to developing and operating next-generation data centres worldwide. The terms of the executed sales agreement mean that CIMIC no longer controls Leakes Road, and accordingly the transaction has been recorded as a disposal of controlled entities in accordance with IFRS 10 on December 31, 2025, when the completion of the conditions precedent became administrative in nature. The sale formally completed on
January 9, 2026.

In February 2025, Abertis announced the acquisition of a majority stake (51%) in the A-63 toll road in France. HOCHTIEF and the other shareholders of Abertis supported Abertis' growth strategy and the acquisition of the French tollroad with new equity. In October 2025, HOCHTIEF therefore subscribed its EUR 80 million share of the capital raise at Abertis totaling EUR 400 million.

In the markets of energy infrastructure and critical minerals, HOCHTIEF's strategy is to expand its presence across the entire value chain and to deliver end-to-end solutions, including equity investments. In this regard, HOCHTIEF further expanded its partnership in 2025 with Germany-focused Vulcan Energy, the world's first sustainable lithium and renewable energy business, with equity- and project-investments totaling EUR 140 million.

In the third quarter of 2025, HOCHTIEF raised its operational profit guidance for the full year 2025 to EUR 750–780 million (previously EUR 680–730 million). This adjusted guidance range corresponds to an increase of 20–25% year on year (2024: EUR 625 million). The increase was driven by an updated assessment of the business performance in the fourth quarter of 2025 – mainly driven by the very strong profit momentum at the Turner segment. With operational net profit of EUR 789 million in 2025, the reported results came out above the top-end of the updated guidance range.

In summary, we assess the HOCHTIEF Group’s business situation and business performance in 2025 to be very solid overall on the basis of achieved sales and profit growth coupled with the strong cash conversion and further growth in the order backlog as the Group continues executing on its strategy.

Financial Review

Group sales

HOCHTIEF generated **sales** of EUR 38.2 billion in 2025. This represents a 15% increase on the prior-year figure (EUR 33.3 billion). On an exchange rate adjusted basis, there was an increase of 21%.

The HOCHTIEF Group's sales performance in the reporting year was in particular driven by continued strong demand across the Group's strategic growth markets. In addition, the consolidation effects from the Thiess transaction (fully consolidated from the second quarter 2024) and from the acquisition of Dornan had a positive impact on Group sales. Due to the deconsolidation of Flatiron at the beginning of 2025, contrary to the prior year HOCHTIEF Group sales in 2025 does not include any sales contributions from Flatiron. On Group level, the net impact of these consolidation changes was limited.

Overall, HOCHTIEF recorded a further year-on-year increase in sales in 2025 – based on strong organic growth and despite the impact from negative exchange rate effects due to the depreciation of the U.S. dollar and the Australian dollar.

Sales

(EUR million)	2025	2024	Change
Turner	25,786.4	19,264.3	33.9%
CIMIC	10,637.4	10,212.5	4.2%
Engineering and Construction	1,675.9	3,628.8	-53.8%
Corporate	136.8	195.7	-30.1%
HOCHTIEF Group	**38,236.5**	**33,301.3**	**14.8%**

Sales at Turner amounted to EUR 25.8 billion in 2025. This was 34% higher than the comparable prior-year figure (EUR 19.3 billion). The year-on-year increase was driven by strong organic growth driven by the data center business and supported by double-digit growth in areas such as healthcare, education, sports facilities, and airports. In addition, the integration of the Dornan Group had a positive impact on Turner's sales development. Adjusting for the negative exchange rate effects, sales growth would have stood at 40%.

CIMIC`s sales amounted to EUR 10.6 billion in 2025, up 4% (2024: EUR 10.2 billion). The sales performance thus remained largely stable with solid growth in strategic growth markets despite the winding down of large transport infrastructure projects. In addition, the sales contributions from Thiess for the full reporting period also had a positive impact in 2025, as in the previous year Thiess was still accounted for as an equity-accounted investment in the first quarter of 2024 and hence no sales contributions from Thiess were included in the HOCHTIEF Consolidated Financial Statements for this period. In addition, sales in the previous year included sales reductions of EUR 488 million (AUD 800 million) compared to EUR 131 million (AUD 230 million) in the reporting period. Adjusting for the negative exchange rate effect from the depreciation of the Australian dollar, sales growth would have been 11%.

Sales in the Engineering and Construction segment amounted to EUR 1.7 billion in 2025. On a nominal basis, there was a decrease compared to the previous year (EUR 3.6 billion), which is solely due to the transfer of Flatiron to the new combined company FlatironDragados and the associated deconsolidation of Flatiron's sales contribution. As FlatironDragados has been accounted for using the at-equity method from the first quarter of 2025, no sales contribution from this company are included in the HOCHTIEF Group's sales. On a comparable basis, i.e. looking at the fully consolidated European operations, sales in 2025 increased by 8% compared to the prior year.

Sales generated in markets outside Germany amounted to EUR 37.2 billion (2024: EUR 32.3 billion). At 97%, the proportion of HOCHTIEF Group sales generated internationally was on the same level as in the prior year.

Operational Statements of Earnings*

(EUR million)	2025	2024	Change
Sales	**38,236.5**	**33,301.3**	**14.8%**
Change in inventories	120.6	15.9	658.5%
Materials expenses	(28,763.9)	(24,540.9)	17.2%
Personnel expenses	(6,010.5)	(6,081.0)	-1.2%
Other operating income	669.2	718.6	-6.9%
Other operating expenses	(1,975.0)	(1,664.8)	18.6%
Net income from equity-accounted associates	94.8	30.1	215.0%
Net income from other participating interests (excl. result from loans)	1.1	75.4	-98.5%
Net non-operating expenses adjustment	(158.1)	26.9	–
EBITDA adjusted	**2,214.7**	**1,881.5**	**17.7%**
Depreciation and amortization	(670.4)	(594.4)	12.8%
EBIT adjusted	**1,544.3**	**1,287.1**	**20.0%**
Net interest income and other financial result	(292.6)	(256.4)	14.1%
Net non-operating expenses adjustment	158.1	(26.9)	–
Profit before tax/PBT	**1,409.8**	**1,003.8**	**40.4%**
Taxes	(390.4)	(136.6)	185.8%
Tax rate (taxes/PBT in %)	27.7%	13.6%	
Profit after tax	**1,019.4**	**867.2**	**17.6%**
Minority interest	(117.1)	(91.6)	27.8%
Consolidated net profit	**902.3**	**775.6**	**16.3%**

* The operational statement of earnings shows the derivation of the operating earnings figures EBITDA (adjusted) and EBIT (adjusted). For this purpose, net non-operating expenses are eliminated from the statement of earnings and are hence not included in EBITDA and EBIT. The net non-operating expenses mainly relate to income and expenses from special items and foreign exchange gains/losses, net income from asset disposals, and impairments/impairment reversals on receivables.

Materials expenses increased in 2025 in line with sales development by 17% to EUR 28.8 billion. **Personnel expenses** amounted to EUR 6.0 billion in 2025 and was thus on the previous year's level (EUR 6.1 billion). This was despite the growth and inclusion of Thiess and Dornan as fully consolidated companies as this was offset by the deconsolidation of Flatiron as a fully consolidated company and by exchange rate effects. In line with the Group's high degree of internationalization, 95% of materials (2024: 89%) and 92% of personnel expenses (2024: 85%) were accounted for by the Turner and CIMIC segments.

Other operating income amounted to EUR 669 million in 2025 (2024: EUR 719 million). In the 2025 reporting year, this was mainly due to the net income of sales of shares in the investments UGL Transport (EUR 165 million) and Leakes Road (EUR 146 million) by CIMIC as well as the one-off non-cash gain before and after tax of EUR 146 million from the transfer of Flatiron to the new combined company FlatironDragados. The prior-year figure included in particular the gain of EUR 593 million from the remeasurement of CIMIC's existing 50% stake in Thiess in connection with the acquisition of a further 10% of the shares in Thiess.

At EUR 2.0 billion, the HOCHTIEF Group's **other operating expenses** in 2025 were EUR 310 million higher than the previous year's figure (EUR 1.7 billion) and mainly include insurance expenses as well as expenses for rents, leases and leasing. The year-on-year increase was in line with the operational growth of the Group.

Net income from equity-accounted associates amounted to EUR 95 million in 2025 with a significant increase on the prior-year figure (EUR 30 million). The year-on-year increase is primarily due to a higher nominal earnings contribution from Abertis amounting to EUR 58 million (2024: negative EUR 14 million) and from the earnings contribution of at equity accounted FlatironDragados since start of 2025.

The **net non-operating expenses adjustments** of negative EUR 158 million (2024: EUR 27 million) are mostly attributable to the one-off non-cash gain before and after tax of EUR 146 million from the transfer of Flatiron to the new combined company FlatironDragados as well as exchange rate gains/losses and gains/losses from impairments and disposals of assets.

HOCHTIEF generated an **EBITDA (adjusted)** of EUR 2.2 billion in 2025, exceeding the previous year's figure of EUR 1.9 billion by EUR 333 million or 18%.

Depreciation and amortization amounted to EUR 670 million in 2025, compared to EUR 594 million in the previous year. The year-on-year increase is primarily attributable to the full consolidation of Thiess for the full 2025 reporting period (in prior year, Thiess was included as a consolidated subsidiary since the end of April 2024).

The **net interest income and other financial result** item comprises net investment and interest income/ expenses as well as net income from loans. In 2025, the net balance was an expense item of EUR 293 million (2024: EUR 256 million). The year-on-year increase was – in addition to lower interest income from bank deposits – in particular due to higher interest expenses in connection with bank and capital market financing for strategic M&A activities of the HOCHTIEF Group in the reporting period and in the prior year.

Profit before tax (PBT)

(EUR million)	2025	2024	Change
Turner	917.4	565.2	62.3%
CIMIC	454.5	475.5	-4.4%
Engineering and Construction	79.2	62.3	27.1%
Abertis	58.3	(13.6)	–
Corporate	(99.6)	(85.6)	-16.4%
Group nominal PBT	**1,409.8**	**1,003.8**	**40.4%**
Non-operational effects	**(106.5)**	**4.5**	**–**
Group operational PBT	**1,303.3**	**1,008.3**	**29.3%**

HOCHTIEF generated **nominal profit before tax (PBT)** of EUR 1.4 billion in 2025. Compared to the previous year (EUR 1.0 billion), there was a total increase of EUR 406 million or 40%, which is mainly attributable to a strong operating performance of the Turner Group. In addition, in the 2025 reporting year, the PBT includes the one-off, non-cash gain before and after tax from the contribution of the shares in Flatiron to the combined company FlatironDragados (EUR 146 million).

In 2025, Turner benefited from its strong market position and enormous growth in the data center market, a strategic growth area for the group. The corresponding mix shift and the expansion of value-added services has driven a further year-on-year improvement in margins. As a result, Turner's nominal PBT in 2025 improved by 62% to EUR 917 million compared to the prior year’s figure (EUR 565 million). The Dornan Group, which has been fully consolidated since the first quarter of 2025, also had a positive PBT contribution.

In the reporting period, CIMIC focused on opportunities in advanced-tech projects as well as on the strategic growth markets of energy infrastructure, critical minerals and defense. Here, the company continues with its disciplined approach for tendering new orders, with a focus on lower-risk and collaborative contracting models with its clients. The nominal PBT amounted to EUR 455 million in 2025 (2024: EUR 475 million). The year-on-year change is also due to the depreciation of the Australian dollar. In local currency, nominal PBT increased from AUD 780 million in the prior year to AUD 796 million in 2025.

The nominal PBT of the Engineering and Construction segment amounted to EUR 79 million in 2025. The improved year-on-year development (2024: EUR 62 million) was supported by higher sales at the European companies, which more than offset the deconsolidation impact from the transfer of Flatiron into the new combined company FlatironDragados.

Earnings contributions to the HOCHTIEF Group from Abertis reflect the Group's 20% interest in Abertis HoldCo, S.A., the operating performance of Abertis, non-cash purchase price allocation (PPA) effects, and HoldCo costs. The average daily traffic volume on the toll roads operated by Abertis increased by 2% in 2025 compared to the previous year. In 2025, Abertis' earnings contribution amounted to EUR 58 million and improved significantly by EUR 72 million compared to the prior year (negative EUR 14 million).

The nominal PBT in the Corporate segment amounted to negative EUR 100 million in 2025 (2024: negative EUR 86 million) and was thus slightly below the previous year's level.

Income tax expense for 2025 amounted to EUR 390 million (2024: EUR 137 million). The resulting effective tax rate was 28% (2024: 14%). The significantly lower effective tax rate in the prior-year period resulted from the tax-free gain on the remeasurement of CIMIC's equity investment in Thiess. Adjusted for that effect and the impact of risk provisioning at CIMIC, the underlying effective tax rate for 2024 amounted to 24%.

The HOCHTIEF Group's **nominal net profit** improved by 16% to EUR 902 million in 2025 compared to the prior year (EUR 776 million). **Operational net profit** also further improved in 2025, exceeding the previous year's figure (EUR 625 million) by 26% at EUR 789 million.

In 2025, the non-operational effects included the one-off, non-cash gain before and after tax of EUR 146 million in connection with the transfer of the shares in Flatiron to the new combined company FlatironDragados. In addition, this includes miscellaneous net expenses in the amount of EUR 33 million. Overall, the non-operational effects for the period from January to December 2025 thus amounted to EUR 113 million. In prior-year period of 2024, the non-operational effects included a non-cash gain from the remeasurement of the fair value of CIMIC's 50% stake in Thiess (EUR 593 million), which amounted to EUR 147 million net of risk provisions for projects at CIMIC (EUR 446 million). In addition, the prior year non-operational effects included miscellaneous earnings of EUR 4 million. In total, the non-operational effects in 2024 amounted to EUR 151 million.

Consolidated net profit/loss

(EUR million)	2025	2024	Change
Turner	681.2	411.2	65.7%
CIMIC	235.0	409.9	-42.7%
Engineering and Construction	57.1	40.4	41.3%
Abertis	58.3	(13.6)	–
Corporate	(129.3)	(72.3)	-78.8%
Group nominal net profit	**902.3**	**775.6**	**16.3%**
Non-operational effects	**(113.0)**	**(150.6)**	**25.0%**
Group operational net profit	**789.3**	**625.0**	**26.3%**

Cash flow

Cash flow and capital expenditure

(EUR million)	2025	2024	Change
Operating cash flow (OCF)	**2,037.9**	**2,129.4**	**(91.5)**
Gross operating capital expenditure	(397.8)*	(391.6)*	(6.2)
Operating asset disposals	36.0	37.4	(1.4)

Cash flow from financing activities	**(73.0)**	**346.1**	**(419.1)**

*excluding investments in data centers at CIMIC

In terms of cash flow development, HOCHTIEF is continuing to focus on strict working capital management to deliver a sustainably high cash conversion. The positive trend in cash generation continued in 2025. The **operating cash flow (OCF)** was once more significantly positive at EUR 2.0 billion in 2025, confirming the good prior-year performance (EUR 2.1 billion).

Gross operating capital expenditure amounted to EUR 398 million in 2025 compared to EUR 392 million in the prior year. With a share of 84% (2024: 88%) of the total capital expenditure volume, the majority still related to the CIMIC segment for project-related capital expenditure – including capital expenditure in mining services of the Thiess Group, which has been included in the HOCHTIEF Consolidated Financial Statements as a consolidated subsidiary since the second quarter of 2024. **Proceeds from operating asset disposals** amounted to EUR 36 million in 2025 (2024: EUR 37 million). The **cash outflow from operational lease payments** amounted to EUR 303 million in 2025 (2024: EUR 249 million). The year-on-year increase was driven by the CIMIC segment – notably driven by the inclusion of Thiess as a consolidated subsidiary for the full fiscal year 2025.

After deducting the cash outflow for net operating capital expenditure and for operational lease payments, the remaining **net operating cash flow** for 2025 amounted to EUR 1.4 billion (2025: EUR 1.5 billion).

Cash flow from investing activities shows cash outflow totaling EUR 1.6 billion for 2025 in the HOCHTIEF Group's Statement of Cash Flows (2024: EUR 1.5 billion). In addition to the cash outflow from gross operating capital expenditure, the acquisition of the Dornan Group by Turner (EUR 436 million), the investments in Vulcan Energy Resources (EUR 140 million), the capital increase at Abertis (EUR 80 million) and other M&A activities led to a cash outflow in 2025. The M&A transactions with UGL Transport and Leakes Road led to a cash inflow of EUR 260 million. In 2024, the capital increase at Abertis (EUR 260 million), the increase in the investment in Thiess (EUR 195 million) and other investments in joint ventures of Flatiron (EUR 397 million) had an impact on cash outflows. Changes in securities holdings and financial receivables had a negative impact of EUR 260 million in 2025 (2024: negative EUR 115 million) which related mainly to the PPP business. In 2025, effects from first-time consolidation and deconsolidation came to negative EUR 569 million (2024: EUR 51 million) and were primarily due to the deconsolidation of Flatiron as a consolidated subsidiary.

In 2025, HOCHTIEF recorded a EUR 73 million net cash outflow under **cash flow from financing activities** (2024: cash inflow EUR 346 million). The borrowings of EUR 3.0 billion in 2025 – as in the prior year (EUR 3.9 billion) – mainly related to financing measures at HOCHTIEF Aktiengesellschaft and CIMIC in the form of bond issues and promissory note loan issues as well as through the drawing of syndicated credit facilities. These borrowings in 2025 were offset by debt repayments in the amount of EUR 2.3 billion (2024: EUR 2.9 billion). In both reporting years, these primarily related to the repayment of credit liabilities at CIMIC and HOCHTIEF Aktiengesellschaft. Repayments of lease liabilities amounted to EUR 303 million in 2025 (2024: EUR 249 million). The year-on-year increase primarily affected CIMIC and was mainly due to the consolidation of Thiess for the complete 2025 fiscal year. In 2025, EUR 509 million (2024: EUR 386 million) was used for dividend payments to HOCHTIEF shareholders and minority interests.

Balance sheet

The HOCHTIEF Group's **total assets** came to EUR 24.4 billion at the December 31, 2025 reporting date, on a par with the end of 2024 (EUR 24.7 billion).

The balance sheet structure was notably impacted by the business combination between Flatiron and Dragados in North America. HOCHTIEF and ACS had announced the planned business combination between the two companies in North America on July 30, 2024. The assets and liabilities of Flatiron were accounted for in accordance with IFRS 5 from the signing of the transaction onward and presented separately as held for sale in the Consolidated Balance Sheet as of December 31, 2024. With the closing of the transaction on January 17, 2025, the assets and liabilities of Flatiron recognized as held for sale were derecognized from the HOCHTIEF Consolidated Balance Sheet, and the combined company FlatironDragados has been accounted for using the equity method in the HOCHTIEF Consolidated Balance Sheet of December 31, 2025.

The assets and liabilities included due to the consolidation of Dornan from the first quarter of 2025 also had an impact on the HOCHTIEF Consolidated Balance Sheet.

Due to the depreciation of the closing exchange rates for the U.S. dollar by 12% and the Australian dollar by 5% compared to December 31, 2024, the HOCHTIEF Consolidated Balance Sheet as of December 31, 2025 was influenced by translation effects from both currencies.

Consolidated Balance Sheet

(EUR million)	Dec. 31, 2025	Dec. 31, 2024
Assets		
Non-current assets		
Intangible assets, property, plant and equipment, and investment properties	5,075.8	5,255.0

Liabilities associated with assets held for sale	–	1,243.9
	14,014.6	**14,896.8**
	24,419.5	**24,654.9**

Non-current assets increased by EUR 580 million compared to December 31, 2024 (EUR 8.0 billion) to EUR 8.5 billion in 2025. One of the main reasons for this was the increase in financial assets due to the acquisition of 38.2% of the shares of the combined company FlatironDragados. In addition, the strategic investment to increase the stake in Vulcan Energy led to an increase in financial assets. This increase was partly offset by the offsetting effect from the payment of the Abertis dividend and negative exchange rate effects. Financial assets thus showed a net increase of EUR 701 million to EUR 2.5 billion in the reporting period. Intangible assets recorded an increase of EUR 178 million to EUR 3.5 billion, which is mainly due to the recognition of goodwill in connection with the full consolidation of Dornan. The increase of intangible assets was also partly offset by negative exchange rate effects. Property, plant and equipment amounted to EUR 1.6 billion as of December 31, 2025 and was therefore mainly due to higher depreciations at CIMIC as well as currency-affected by EUR 342 million below the 2024 year-end figure (EUR 1.9 billion). Non-current financial receivables in the amount of EUR 259 million (December 31, 2024: EUR 134 million) primarily result from PPP operations.

Current assets decreased by EUR 816 million in the reporting period from January to December 2025 to EUR 15.9 billion (December 31, 2024: EUR 16.7 billion), which is mainly driven by the business combination of Flatiron and Dragados in North America. The closing of the transaction resulted in the derecognition of Flatiron's assets held for sale in the amount of EUR 2.0 billion which was included in the Consolidated Balance Sheet as of December 31, 2024. The assets held for sale still reported in HOCHTIEF's Consolidated Balance Sheet as of December 31, 2025 relate exclusively to CIMIC. Marketable securities increased in 2025 by EUR 36 million to EUR 847 million (December 31, 2024: EUR 811 million). As in the prior year, this mainly relates to fixed-income securities. The liquidity development in the reporting year 2025 was in particular influenced by the strong operating cash flow as well as by the strategic capital allocation decisions and exchange rate effects. Cash and cash equivalents increased by EUR 505 million compared to December 31, 2024 (EUR 5.7 billion) to EUR 6.2 billion at the end of the 2025 reporting year. Overall, the HOCHTIEF Group's liquidity position of EUR 7.1 billion remains robust and improved year on year (EUR 6.5 billion). Trade receivables and other receivables increased by a total

of EUR 660 million to EUR 8.0 billion in 2025—driven by the Group's operational sales growth and the consolidation of Dornan.

The HOCHTIEF Group's **equity** amounted to EUR 1.4 billion as of the December 31, 2025 reporting date (December 31, 2024: EUR 1.2 billion). The increase of EUR 194 million related to profit after tax (EUR 1.0 billion), dividend distributions (negative EUR 502 million), as well as other changes outside of the statement of earnings—mainly from exchange rate impacts (negative EUR 323 million).

As of the December 31, 2025 reporting date, **non-current liabilities** totaled EUR 9.0 billion (December 31, 2024: EUR 8.6 billion). This was primarily due to the increase in financial liabilities by EUR 753 million to EUR 7.4 billion in connection with the long-term Group financing measures. This included the long-term refinancing of a maturing bond of HOCHTIEF Aktiengesellschaft. The bond that has now been refinanced was previously included in current financial liabilities due to its maturity. Non-current lease liabilities recognized in connection with the application of IFRS 16 decreased mainly at CIMIC and amounted to EUR 423 million as of the December 31, 2025 reporting date (December 31, 2024: EUR 508 million). Non-current provisions increased by EUR 59 million in the reporting year and amounted to EUR 839 million at the end of 2025 (December 31, 2024: EUR 780 million). Of this amount, EUR 242 million (December 31, 2024: EUR 298 million) was attributable to provisions for pensions and similar obligations and EUR 597 million (December 31, 2024: EUR 482 million) to other provisions. The increase in other provisions mainly related to Turner in connection with the integration of Dornan as a fully consolidated subsidiary in HOCHTIEF's Consolidated Financial Statements.

HOCHTIEF's **current liabilities** decreased by a total of EUR 882 million in the reporting period and amounted to EUR 14.0 billion as of December 31, 2025 (December 31, 2024: EUR 14.9 billion). A significant part of the decrease resulted from the derecognition of Flatiron's liabilities associated with assets held for sale in the amount of EUR 1.2 billion as of December 31, 2024 due to the closing of the business combination between Flatiron and Dragados in North America. In addition, current financial liabilities decreased by EUR 599 million to EUR 188 million (December 31, 2024: EUR 787 million), mainly due to the repayment of bonds of HOCHTIEF Aktiengesellschaft maturing in the reporting period. Put options granted to non-controlling interests in the amount of EUR 610 million (December 31, 2024: EUR 642 million) related—unchanged to the prior year—to the put option at Elliott Advisors (UK) Ltd for the sale to CIMIC of the remaining non-controlling interests in Thiess. The year-on-year decrease was solely due to foreign exchange rate developments. Lease liabilities came to EUR 224 million as of the December 31, 2025 reporting date compared to EUR 286 million at the end of 2024. Trade payables and other liabilities amounted to EUR 11.5 billion, EUR 837 million above the figure as of December 31, 2024 (EUR 10.6 billion). The increase was in line with the operating business—in particular at Turner.

The HOCHTIEF Group's **net financial debt** amounted to EUR 97 million as of December 31, 2025 with an year-on-year improvement of EUR 23 million compared to December 31, 2024 (EUR 120 million). The development of net debt in 2025 was driven by a strong net operating cash flow (OCF) in the amount of EUR 1.4 billion, which was largely offset by cash outflow due to strategic capital allocation decisions, foreign exchange rate impact and other consolidation items. This includes in particular the acquisition of Dornan (EUR 436 million), the deconsolidation of Flatiron (EUR 387 million), the investment in Vulcan Energy (EUR 140 million) and the capital increase at Abertis (EUR 80 million). In addition, the cash outflow from the dividend distribution to HOCHTIEF shareholders (EUR 393 million) had an impact on net financial debt in 2025. Conversely, the UGL Transport transaction carried out at CIMIC led to a reduction in net financial debt of EUR 281 million. Adjusting for the effects of capital allocation and consolidation effects, there would be a year-on-year improvement in the net debt position by EUR 1.2 billion to a net cash position of EUR 1.1 billion as of December 31, 2025.

HOCHTIEF Group net cash (+)/net debt (-) development

(EUR million)	Dec. 31, 2025	Dec. 31, 2024	Change
Turner	3,270.7	3,091.7	179.0
CIMIC	(1,367.8)	(1,734.1)	366.3
Engineering and Construction	871.1	1,174.5	(303.4)
Corporate	(2,871.3)	(2,652.0)	(219.3)
Group	**(97.3)**	**(119.9)**	**22.6**

Securing Group liquidity long-term and optimizing the financial structure

Bank financing at HOCHTIEF Aktiengesellschaft

The EUR 1.7 billion syndicated credit and guarantee facility successfully refinanced in March 2023 and maturing in 2028 continues to be one of HOCHTIEF Aktiengesellschaft's most important financing instruments. The second extension option was exercised in 2025, extending the maturity until March 2030. A EUR 1.2 billion guarantee facility tranche permits the furnishing of guarantees for ordinary activities, mainly in the European business. The EUR 0.5 billion credit facility tranche is used flexibly as needed. As of the reporting date, the credit facility tranche was undrawn. The refinancing included a three-year term loan for an additional EUR 0.3 billion for future refinancing arrangements. The latter was refinanced early in July 2025 and now amounts to EUR 0.35 billion. The maturity of the new term loan has been adjusted to that of the syndicated loan and thus also ends in March 2030.

HOCHTIEF continues to have bilateral, short-term credit facilities to furnish operational units with sufficient cash resources to finance day-to-day business. These facilities, which have to be renewed annually, run to a total of EUR 340 million. They are confirmed for a term of up to one year. Drawings on these short-term credit facilities were zero as of the reporting date.

HOCHTIEF Aktiengesellschaft's syndicated guarantee facility is supplemented with bilateral guarantee facilities totaling some EUR 1.47 billion as of the 2025 year-end.

The various borrowing instruments secure long-term, broadly diversified funding for the Group on borrowing terms and conditions that continue to be attractive. None of the borrowing instruments taken out by HOCHTIEF is secured and all are pari-passu, with all lenders having equal seniority.

The syndicated and bilateral facilities are supplemented with project-related borrowing as needed. Such borrowings are each negotiated and agreed on the basis of a specific project, can be used solely for the project concerned, and are repaid out of the proceeds at the latest when the project is sold. They are usually secured exclusively against project assets themselves and, in almost all cases, any recourse to the HOCHTIEF Group is expressly precluded.

Capital market financing at HOCHTIEF Aktiengesellschaft

On October 16, 2025, a promissory note loan totaling EUR 210 million was issued by HOCHTIEF Aktiengesellschaft. The term of the promissory note tranche is 5 years. The proceeds from the issue are to be used for general corporate purposes such as refinancing existing financial liabilities. On October 27, 2025, two promissory note tranches totaling EUR 153 million were repaid as scheduled.

On June 24, 2025, a bond issued in the 2019 financial year in the amount of CHF 50 million was repaid as planned. On July 3, 2025, a bond issued in the 2018 financial year in the amount of EUR 403.367 million was repaid as scheduled.

On September 30, 2025, a bond of CHF 180 million with a term of 7 years and a coupon of 1.5125% per annum was placed by HOCHTIEF Aktiengesellschaft on the international capital market.

As in the reporting year and prior years, HOCHTIEF Aktiengesellschaft will additionally continue to keep a close watch on the financial and capital markets and take advantage of any opportunities to further optimize and diversify the Group's financing.

Financing events in the segments

As in the prior year, there are also local borrowings in the segments.

As of September 30, 2025, CIMIC early refinanced its cash credit facility of AUD 625 million due in October 2026. As part of this, CIMIC raised a new revolving cash credit facility of AUD 717 million with a term of 5 years. In addition, two term loans of AUD 490 million and JPY 9.85 billion (AUD 94 million) were concluded, also with terms of 5 years. As a result, the total loan amount was increased by a total of approximately AUD 682 million (EUR 387 million).

For the HOCHTIEF companies in North America, the US-Surety-Bonding-Facility is of particular importance. With an increased outstanding volume of around EUR 13.4 billion (approximately USD 15.8 billion), which reflects the dynamic order development and the associated demand, it continues to be the central financing component for the US business. This local surety bonding line will continue to be backed by a Group guarantee by HOCHTIEF.

HOCHTIEF Group credit rating

On October 7, 2025, rating agency Standard & Poor's (S&P) reaffirmed HOCHTIEF's existing investment-grade rating (BBB-/Stable Outlook/A-3). The S&P rating for CIMIC also remained unchanged in 2025 at BBB-/A-3. S&P reaffirmed this rating in August, while rating agency Moody's confirmed its rating of Baa3 (stable) in December 2025.

Sustainable financing at HOCHTIEF[1]

HOCHTIEF defines sustainable financing as all financing and investment decisions that also take environmental, social, and governance (ESG) criteria into account.

Sustainable finance comprises financing and investment activities required to support, among others, the United Nations Sustainable Development Goals (SDGs) and the Paris Climate Agreement. This includes activities that have a positive impact on both the environmental and society.

HOCHTIEF Finance department continues to work closely with Corporate Sustainability department on the preparation of the Group's own Sustainability-Linked Financing Framework aiming to connect HOCHTIEF's Sustainability Plan and the Group's funding strategy.

Within the Sustainability-Linked Financing Framework, HOCHTIEF will outline the classification logic, eligibility criteria, applicable due diligence requirements and verification process for its sustainability activities consistently fulfilling respective sustainable finance principles and requirements, which are currently applied in the market.

HOCHTIEF Aktiengesellschaft (Holding Company): Financial Review of Financial Statements under German GAAP (HGB)

HOCHTIEF Aktiengesellschaft heads the Group's segments as a strategic and operational management holding company. Comprising the control level, it is responsible for the entrepreneurial goals, fundamental strategic direction, enterprise policies, and organization of the HOCHTIEF Group.

HOCHTIEF Aktiengesellschaft's profits are mostly determined by net income from participating interests, by net investment and interest income as well as by revenues and expenditure relating to its function as a holding company. This means the business performance of HOCHTIEF Aktiengesellschaft is generally determined by the same opportunities and risks and the business performance of the HOCHTIEF Group. Accordingly, the foregoing information on the HOCHTIEF Group also applies to HOCHTIEF Aktiengesellschaft.

The annual financial statements of HOCHTIEF Aktiengesellschaft are prepared in accordance with the German Commercial Code (HGB) and Stock Corporations Act (AktG). There are no significant recognition and measurement changes relative to the prior year. The 2025 Annual Financial Statements and Combined Management Report of HOCHTIEF Aktiengesellschaft and the Group are, as in the prior year, published in the Unternehmensregister (Company Register).

Earnings

HOCHTIEF Aktiengesellschaft's reported sales mainly relate to services in connection with performing the functions of a holding company. This primarily comprises remuneration for administration and other services as well as rental income. Sales decreased mainly due to lower income from bonding fees of EUR 104 million (2024: EUR 115 million) by a total of EUR 12 million to EUR 114 million. Other operating income came to EUR 25 million and was thus EUR 18 million below the previous year's figure (EUR 43 million). The decrease was mainly due to lower income from exchange rate gains. Personnel expenses amounted to EUR 34 million and thus remained at the previous year's level. Other operating expenses of EUR 85 million were also at the previous year's level (EUR 83 million). The expenses from foreign exchange losses included in this figure amounted to EUR 22 million (2024: EUR 23 million).

Net income from financial assets chiefly comprises income and expense from profit/loss transfer agreements as well as income from long-term equity investments. It showed a year-on-year increase of EUR 326 million to EUR 732 million (2024: EUR 406 million). The income from profit/loss transfer agreements included in this figure increased by EUR 676 million to EUR 965 million compared to the previous year (EUR 289 million). The improvement was mainly due to higher income from HOCHTIEF Americas GmbH. Expenses from transfer of losses increased by EUR 350 million to EUR 352 million compared to the prior year (EUR 2 million). This was mainly due to expenses from the transfer of losses from HOCHTIEF Asia Pacific GmbH in connection with the writedown by the company on shares in an affiliated foreign company. At EUR 119 million, income from participating interests remained unchanged relative to the prior year and related in its entirety to Abertis HoldCo S.A.

Net interest income came to a negative EUR 78 million in 2025, compared to negative EUR 10 million in the prior year. The change was primarily due to lower interest income from Group companies – in particular in connection with the redemption of loans granted to Group companies to optimize the capital structure of the group segment CIMIC and as a result of the combination of Flatiron with the North American activities of Dragados in the new combined company FlatironDragados.

HOCHTIEF Aktiengesellschaft's net profit before changes in reserves amounted to EUR 658 million in 2025 (2024: EUR 438 million).

HOCHTIEF Aktiengesellschaft Statement of Earnings (Summary)

Balance sheet

In keeping with its function as a holding company, HOCHTIEF Aktiengesellschaft's balance sheet is dominated by financial assets and receivables from affiliated companies. These items accounted for 93% of total assets as of the December 31, 2025 reporting date (December 31, 2024: 91%).

HOCHTIEF Aktiengesellschaft's financial assets of EUR 6.8 billion as of December 31, 2025 (December 31, 2024: EUR 6.5 billion) mostly related to shares in affiliated companies and participating interests. Shares in affiliated companies essentially comprised the carrying amounts of the investments in HOCHTIEF Asia Pacific GmbH, HOCHTIEF Americas GmbH, HOCHTIEF Europe GmbH, and HOCHTIEF Insurance Broking and Risk Management Solutions GmbH. The addition in shares in affiliated companies of EUR 166 million in the reporting year was largely due to a capital increase at HOCHTIEF Asia Pacific GmbH, Essen, and also from the founding of HOCHTIEF Lithium Holding GmbH, Essen. Participating interests chiefly related as before to the shares in Abertis HoldCo S.A. and increased due to a capital increase at the company by EUR 80 million.

Inventories, receivables, other assets, and prepaid expenses went up by EUR 568 million to EUR 1.6 billion. Most of this relates to receivables against affiliated companies from intra-Group financial management.

Financial resources came to EUR 522 million as of the December 31, 2025 reporting date (December 31, 2024: EUR 727 million). This primarily relates to bank balances.

The Company's capital stock is divided into 77,711,300 no-par-value bearer shares. At nominal value, and calculated allowing for shares of treasury stock, subscribed capital stood at EUR 193 million, as in the prior year. The capital reserve chiefly comprises the premium on shares issued by HOCHTIEF Aktiengesellschaft and remained unchanged relative to the prior year at EUR 2.1 billion.

As of the December 31, 2025 balance sheet date, the equity ratio was unchanged to the prior year at 40%.

HOCHTIEF Aktiengesellschaft Balance Sheet (Summary)

(EUR million)	Dec. 31, 2025	Dec. 31, 2024
Non-current assets		
Intangible assets and property, plant and equipment	10.9	10.5
Financial assets	6,771.5	6,526.3
	6,782.4	**6,536.8**
Current assets		
Inventories, receivables and other assets, and prepaid expenses	1,570.4	1,002.7
Financial resources	522.0	727.2
	2,092.4	**1,729.9**
Total assets	**8,874.8**	**8,266.7**
Shareholders' equity	3,582.2	3,316.4
Provisions	295.4	295.5
Liabilities and deferred income	4,997.2	4,654.8
Total liabilities	**8,874.8**	**8,266.7**

Liabilities and deferred income amounted to EUR 5.0 billion at the 2025 year-end (December 31, 2024: EUR 4.7 billion). The year-on-year increase resulted was mainly due to higher liabilities to affiliated companies in the mount of EUR 1.4 billion (December 31, 2024: EUR 904 million). As before, these related to intra-Group financial management.

In addition, liabilities include bonds and liabilities to banks totalling EUR 3.6 billion (December 31, 2024: EUR 3.7 billion). The year-on-year decline of EUR 149 million was mainly the net result of the repayment of bonds and liabilities to banks, offset by borrowings from the financing measures carried out in the capital and banking markets during the reporting year.

These included the scheduled repayment of a corporate bond issued in 2018 and refinanced early in May 2024 with an outstanding nominal amount of EUR 403 million, as well as the scheduled repayment of a private placement of CHF 50 million issued in 2019. The EUR 300 million term loan tranche of the syndicated facility with an original maturity in March 2026 was refinanced early with a new volume of EUR 350 million. In addition, HOCHTIEF Aktiengesellschaft issued a promissory note loan of EUR 210 million and placed a bond with a volume of CHF 180 million.

Furthermore, the syndicated credit facility continues to be a central long-term financing instrument. The facility with an initial term to March 2028 and two extension options of one year each, was extended in March 2025 until March 2030. The EUR 1.2 billion proportionate guarantee facility tranche was drawn in the amount of EUR 728 million as of the reporting date December 31, 2025 (December 31, 2024: EUR 831 million). As in the prior year, there are no drawings on the EUR 500 million proportionate credit facility tranche as of the reporting date December 31, 2025.

Additionally, the commercial paper program with a ceiling of EUR 750 million launched in May 2020 remained unutilized at the December 31, 2025 reporting date, as was the case at the end of the prior year.

The full list of bond issues is as follows:

	Carrying amount Dec. 31, 2025 (EUR thousand)	Carrying amount Dec. 31, 2024 (EUR thousand)	Principal amount Dec. 31, 2025 (thousand)	Coupon (%)	Initial term (in years)	Matures
HOCHTIEF AG bond (2025)	194,179	–	CHF 180,000	3.82	7	September 2032

HOCHTIEF AG bond (2019)	–	44,762	CHF 50,000	0.77	6	June 2025
HOCHTIEF AG bond (2018)	–	406,877	EUR 403,367	1.75	7	July 2025
	2,269,662	**2,527,123**				

HOCHTIEF Aktiengesellschaft's net profit before changes in reserves for 2025 stands at EUR 657.5 million. Deducting the appropriations to retained earnings (EUR 157.6 million) and adding in profit carried forward (EUR 13.0 million), distributable profit stands at EUR 512,9 million.

Executive Board proposal for the use of net profit

The Executive Board proposes a resolution on the use of net profit as follows:

The distributable profit of HOCHTIEF Aktiengesellschaft for 2025 in the amount of EUR 512,894,580.00 will be used to pay a dividend of EUR 6.60 per eligible no-par-value share for the capital stock of EUR 198,940,928.00, divided into 77,711,300 no-par-value shares.

The dividend is payable on July 7, 2026.

The amount that would have been payable on shares of treasury stock held by the Company as of the day of the Annual General Meeting and that, under Section 71b of the German Stock Corporations Act (AktG), is not eligible for a dividend will be carried forward. As of the date of preparation of the annual financial statements, February 18, 2026, HOCHTIEF Aktiengesellschaft held a total of 2,469,695 shares of treasury stock, which would mean an amount of EUR 16,299,987.00 to be carried forward. The number of no-par-value shares with dividend entitlement for 2025 may change in the run-up to the Annual General Meeting. In that event, while the distribution of EUR 6.60 per no-par-value share with dividend entitlement for 2025 will stay the same, an adjusted proposal for the appropriation of net profit will be made to the Annual General Meeting.

Outlook for HOCHTIEF Aktiengesellschaft (holding company) under German GAAP (HGB)

The performance indicator for HOCHTIEF Aktiengesellschaft under German GAAP (HGB) is net profit. In accordance with the forecast made in the previous year, net income for 2025 was expected to be significantly higher than in 2024.

With a net profit of EUR 658 million – significantly higher than the previous year's figure of EUR 438 million – the forecast made in the previous year was achieved. This was mainly due to the increase in net income from financial assets.

For 2026, we expect net income to be slightly above the level of 2025. Here, we expect a further increase in net income from financial assets.

Disclosures pursuant to Section 289 (2) Sentence 2 of the German Commercial Code

The disclosures pursuant to Section 160 (1) 2 of the German Stock Corporations Act are contained in the Notes to the Annual Financial Statements of HOCHTIEF Aktiengesellschaft.

Disclosures pursuant to Sections 289a Sentence 1 No. 1 and 315a Sentence 1 No. 1 of the German Commercial Code

The information on the composition of subscribed capital pursuant Sections 289a Sentence 1 No. 1 and 315a Sentence 1 No. 1 of the German Commercial Code is included in the Notes to the Financial Statements (7, Equity)/the Notes to the Consolidated Financial Statements (24, Equity).

The Executive Board is unaware of any restrictions on voting rights or on transfers of securities **within the meaning of Sections 289a Sentence 1 No. 2 and 315a Sentence 1 No. 2 of the German Commercial Code**— with one exception regarding contractual restrictions on the transfer of shares. Insofar as shares were transferred to members of the Executive Board by the Company in the past in order to settle their claims to variable remuneration, these shares were subject to a lock-up period of two or three years.

Holdings of more than 10% of voting rights within the meaning of Sections 289a Sentence 1 No. 3 and 315a Sentence 1 No. 3 of the German Commercial Code: On November 13, 2023, we were notified by ACS, Actividades de Construcción y Servicios, S.A., Madrid, Spain, pursuant to Section 33 of the German Securities Trading Act (WpHG), that its voting share in HOCHTIEF Aktiengesellschaft amounted to 75.71% on November 10, 2023.

Disclosures pursuant to Sections 289a Sentence 1 No. 4 and No. 5 and 315a Sentence 1 No. 4 and No. 5 of the German Commercial Code

There are no shares with special control rights. The Executive Board is not aware of any employee shares where the control rights are not exercised directly by the employees.

Disclosures pursuant to Sections 289a Sentence 1 No. 6 and 315a Sentence 1 No. 6 of the German Commercial Code

Appointment and replacement of members of the Executive Board/changes to the Articles of Association: The appointment and replacement of Executive Board members is governed by Sections 84 and 85 of the German Stock Corporations Act (AktG) and Section 31 of the Codetermination Act (MitbestG) read in conjunction with Sections 9 (2) and 7 (1) of the Company's Articles of Association. Statutory rules on the amendment of the Articles of Association are contained in Section 179 et seq. and Section 133 AktG. In instances where the Act requires a majority of the capital stock represented at the time of the resolution in addition to a majority of votes cast, Section 23 (3) of the Articles of Association provides that a simple majority will suffice unless there is a mandatory requirement stipulating a different majority. Under Section 15 of the Articles of Association, the Supervisory Board is authorized to make amendments that only affect the wording of the Articles of Association.

Disclosures pursuant to Sections 289a Sentence 1 No. 7 and 315a Sentence 1 No. 7 of the German Commercial Code

Executive Board authorization to issue new shares: Pursuant to Section 4 (5) of the Articles of Association, the Executive Board is authorized, subject to Supervisory Board approval, to increase the capital stock by issuing new no-par-value bearer shares for cash and/or non-cash consideration in one or more issues by up to a total of EUR 65,752 thousand by or before April 26, 2027 (Authorized Capital I). Detailed provisions are contained in the stated section of the Articles. Pursuant to Section 4 (6) of the Articles of Association, the Executive Board is authorized, subject to Supervisory Board approval, to increase the capital stock by issuing new no-par-value bearer shares for cash and/or non-cash consideration in one or more issues by up to a total of EUR 33,718 thousand by or before April 25, 2026 (Authorized Capital II). Detailed provisions are contained in the stated section of the Articles. Pursuant to Section 4 (4) of the Articles of Association, the Company's capital stock has been conditionally increased by up to EUR 51,200 thousand divided into up to 20 million no-par-value bearer shares (conditional capital). Detailed provisions are contained in the stated section of the Articles.

Authorization to repurchase shares: The Company is authorized by resolution of the Annual General Meeting of April 27, 2022 to repurchase its own shares in accordance with Section 71 (1) 8 of the German Stock Corporations Act (AktG). This authorization expires on April 26, 2027. It is limited to 10% of the capital stock at the time of the Annual General Meeting resolution or at the time of exercising the authorization, whichever figure is smaller. The authorization can be exercised directly by the Company or by a company in its control or majority ownership or by third parties engaged by the Company or engaged by a company in its control or majority

ownership and allows the share repurchase to be executed in one or more installments covering the entire amount authorized or any fraction. Shares of treasury stock may be acquired on the stock exchange, or by way of a public offer to buy made to all shareholders, or by way of a public invitation to tender made to all shareholders, or by issue of tender rights to shareholders. The conditions governing the repurchase are set forth in detail in the resolution.

By resolution of the Annual General Meeting of April 27, 2022, the Executive Board is authorized, subject to Supervisory Board approval, in the event of a sale of treasury shares effected by way of an offer to all shareholders, to issue subscription rights to the shares to holders of warrant-linked and/or convertible bonds issued by the Company or by any subordinate Group company. The Executive Board is also authorized, subject to Supervisory Board approval, to sell shares of treasury stock other than through the stock exchange and other than by way of an offer to all shareholders, provided that the shares are sold for cash at a price not substantially below the current stock market price for Company shares of the same class at the time of sale.

The HOCHTIEF Aktiengesellschaft Executive Board is further authorized, subject to Supervisory Board approval and the conditions set out in the following, to offer and transfer shares of treasury stock to third parties other than through the stock exchange and other than by way of an offer to all shareholders. Such transactions may take place in the course of acquisitions of business enterprises in whole or in part or of other assets and in the course of mergers. They are likewise permitted for the purpose of obtaining a listing for the Company's shares on foreign stock exchanges where it is not yet listed. The shares may furthermore be offered for purchase by employees or former employees of the Company or its affiliates. Holders of bonds which the Company or a Group company subordinate to it issues or has issued may also be issued with the shares upon exercising the warrant and/or conversion rights and/or obligations attached to the bonds.

On condition that they be held for at least two years after transfer, the shares may also be transferred to (current or past) members of the Executive Board of the Company and to (current or past) members of the executive boards and general management of companies under its control within the meaning of Section 17 of the German Stock Corporations Act (AktG), and to current or past employees of the Company or of a company under its control within the meaning of Section 17 AktG. Such transfers are permitted solely for the purpose of settling the transferees' variable compensation entitlements. Further conditions of transfer are detailed in the resolution. Where shares are issued to members of the Executive Board of the Company, the decision to issue the shares is taken solely by the Supervisory Board.

Shareholders' statutory subscription rights to such shares are barred pursuant to Sections 71 (1) 8 and 186 (3) and (4) of the German Stock Corporations Act (AktG) to the extent that the shares are used in exercise of the authorizations set out above.

In addition, the Executive Board is authorized, subject to Supervisory Board approval, to cancel shares of treasury stock without a further resolution of the Annual General Meeting being required for the cancellation itself or its execution.

The conditions governing awards of subscription rights and the sale, transfer, and retirement of treasury stock are set forth in detail in the Annual General Meeting resolution.

Under a further resolution of the Annual General Meeting of April 27, 2022, the Company is authorized to acquire shares of treasury stock in accordance with Section 71 (1) 8 AktG using equity derivatives as well as to exclude shareholders' rights to sell shares and subscription rights. This is not intended to increase the total volume of shares that may be purchased; instead, it merely opens the way for other alternatives to purchase shares of treasury stock within and against the upper limit set in the aforementioned authorization. The Executive Board has been authorized to acquire options which, when exercised, entitle the Company to acquire shares of the Company (call options). Furthermore, the Executive Board is authorized to sell options which, when exercised by their holder, require the Company to acquire shares of the Company (put options). In addition, the shares can be

acquired using a combination of call and put options or forward purchase agreements. Further details of the conditions for the use of equity derivatives in the acquisition of treasury stock and for the exclusion of shareholders' rights to sell and subscription rights are set out in the Annual General Meeting resolution.

Disclosures pursuant to Sections 289a Sentence 1 No. 8 and 315a Sentence 1 No. 8 of the German Commercial Code

Change-of-control clauses in connection with loan agreements and financing instruments:

Instrument	Issue date	Principal amount	Maturity
Bond issue	September 2019	EUR 500 million	September 2027
Bond issue	September 2019	EUR 250 million	September 2031
Bond issue	April 2021	EUR 500 million	April 2029
Private placement	April 2019	EUR 50 million	April 2034
Private placement	July 2019	NOK 1 billion	July 2029

The terms of the above bond issues and private placements (based on the contractual framework for the Debt Issuance Program[1]) include change-of-control clauses entitling each holder to require early redemption of the bonds held at their principal amount together with interest accrued, provided that the holder submits a completed exercise notice within 45 days of the issuer publishing the put event notice. A change of control is defined in this context as the acquisition of control within the meaning of Section 29 (2) of the German Securities Acquisition and Takeover Act (WpÜG) over HOCHTIEF Aktiengesellschaft by a party or group of parties acting in concert within the meaning of Section 30 (2) WpÜG—excluding shareholder ACS (ACS Actividades de Construcción y Servicios, S.A.) and its affiliates—or entering into a profit and loss transfer agreement, control agreement, or other intercompany agreement within the meaning of Sections 291 and 292 of the German Stock Corporations Act (AktG) to the extent that the agreement results in the issuer becoming a controlled company.

In March 2017, HOCHTIEF Aktiengesellschaft issued a promissory note loan for EUR 500 million. Further promissory note loans were issued in May 2019 and in October 2022 with initial principal amounts of EUR 300 million and EUR 246 million, respectively. Additionally, HOCHTIEF Aktiengesellschaft issued a bilateral loan for EUR 25 million in June 2019. In December 2023, HOCHTIEF Aktiengesellschaft launched a promissory note loan issue for EUR 64 million. In March 2024, HOCHTIEF Aktiengesellschaft issued a promissory note loan for a total of EUR 470 million. The notes have staggered terms of three, five, seven, and ten years. HOCHTIEF Aktiengesellschaft launched a further promissory note loan issue in October 2025 for a total of EUR 210 million. The loan has a term of five years. The contractual documentation for the EUR 470 million and EUR 210 million promissory note loans issued in March 2024 and October 2025 likewise includes change-of-control clauses requiring HOCHTIEF Aktiengesellschaft to repay the loan with interest by then accrued if HOCHTIEF Aktiengesellschaft and the lender concerned do not reach agreement on the loan's continuation within 60 bank working days of announcement of a change of control and the lender demands early repayment in writing within ten bank working days of the 60 bank working-day period expiring. A change of control is deemed to have occurred if, within the meaning of Section 29 (2) of the German Securities Acquisition and Takeover Act (WpÜG), a party (except a member of the ACS Group), or group of parties (except members of the ACS Group) acting in concert within the meaning of Section 30 (2) WpÜG, acquires control of HOCHTIEF Aktiengesellschaft, or if a profit and loss transfer agreement, control agreement, or other intercompany agreement within the meaning of Section 291 or 292 AktG is entered into between a member of the ACS Group and HOCHTIEF Aktiengesellschaft as controlled company.

HOCHTIEF Aktiengesellschaft entered into a syndicated credit and guarantee facility for a total of EUR 1.7 billion with an international banking syndicate on March 30, 2023. Set to run until March 2030, the syndicated facility comprises a EUR 1.2 billion guarantee facility tranche and a EUR 500 million credit facility tranche. The arrangement also contains EUR 350 million in term loans maturing March 2030. The facility includes change-of-control clauses. Lenders may each withdraw from their credit exposure early subject to satisfaction of an agreed condition precedent if negotiations with the borrower to continue the facility have failed, such negotiations having

[1] The Debt Issuance Program launched in June 2018 with a maximum volume of EUR 3 billion allows bonds to be issued on the market on an ongoing basis. This enables HOCHTIEF Aktiengesellschaft not only to borrow more rapidly, taking advantage of favorable issue windows, but also to spread borrowing over a broader range of lenders.

given consideration to the credit standing of the party taking control, the risk of any change in corporate strategy, and the risk of the lenders being restricted in any way in provision of the facility. The condition precedent is satisfied if a party, or group of parties acting in concert, secures control of the borrower within the meaning of Section 29 (2) WpÜG. Lenders may give notice of termination of their credit exposure within 70 days of it becoming known to HOCHTIEF Aktiengesellschaft that the condition precedent has been satisfied, subject to a minimum of ten days to consider the options available. As before, the change-of-control clauses outlined do not apply to shareholder ACS and its affiliates.

Other material loan agreements with change-of-control provisions are as follows:

On June 21, 2023, a global credit facility agreement for EUR 100 million was entered into with a German bank. The agreement contains a provision under which, in the event of a change of control, HOCHTIEF Aktiengesellschaft must repay the loan early if it and the lender do not reach agreement on the loan's continuation within 60 days of announcement of the change of control, and the lender demands early repayment within ten days of the 60-day period expiring. In this context, a change of control is defined as a party, or group of parties acting in concert within the meaning of Section 30 (2) WpÜG, acquiring control of HOCHTIEF Aktiengesellschaft within the meaning of Section 29 (2) WpÜG. The outlined change-of-control clauses for the aforementioned loan agreement do not apply to shareholder ACS and its affiliates.

To secure an approximately EUR 13.4 billion (USD 15.8 billion) bonding line provided by six U.S. surety companies, a general counter indemnity continued to exist between HOCHTIEF Aktiengesellschaft and the surety companies for a corresponding amount as of the reporting date. As before, this general counter indemnity contains a change-of-control provision giving the surety companies the right, if an agreed condition precedent is satisfied, to demand from HOCHTIEF Aktiengesellschaft up to approximately EUR 426 million (USD 500 million) by way of security. The condition precedent is satisfied if a party, or group of parties acting in concert within the meaning of Section 30 (2) WpÜG (with the exception of shareholder ACS and its affiliates), acquires in total 30% or more of all shares in HOCHTIEF Aktiengesellschaft. The security payment must then be made within 30 bank working days of notification that it is required.

Further material agreements conditional on a change of control: A change in majority ownership by direct or indirect acquisition of HOCHTIEF Aktiengesellschaft is defined in the D&O insurance policy as a risk-related circumstance of which the insurer must be notified within a specified period. Material change in risk circumstances entitles the insurer to demand a premium adjustment. In the event that the parties are unable to agree on the amount of the premium adjustment, the insurance cover lapses in regard of the risk-related circumstance.

Above and beyond the mandatory disclosures under Sections 289a Sentence 1 No. 8 and 315a Sentence 1 No. 8 of the German Commercial Code, other Group companies are party to further agreements that are conditional upon a change of control. The following is a non-exhaustive presentation: In the PPP segment, project contracts frequently accord the client substantial rights that make it difficult to effect a change of ownership structure in the project company.

Disclosures pursuant to Sections 289a Sentence 1 No. 9 and 315a Sentence 1 No. 9 of the German Commercial Code

As of the balance sheet date, there are no agreements with members of the Executive Board or employees providing for compensation in the event of a takeover offer.

RESEARCH AND DEVELOPMENT DISTRICT, SAN DIEGO, USA

With the mixed-use Life Sciences Campus, Turner delivered the largest urban commercial complex on the California coast—five buildings with retail stores, restaurants, open green spaces, rooms for public art and events, and excellent transport links.

Segments
Turner

Turner, our North American-based, advanced-tech building solutions company, is an international construction services company and a leading builder in diverse market segments. Widely recognized for undertaking large and complex projects, fostering innovation, and embracing emerging technologies, the company makes a difference for clients, employees, and the community. Turner offers clients the accessibility and support of a local firm with the stability and resources of a multinational organization.

The New York-based company is the biggest U.S. general builder—a position it has achieved by virtue of its technical expertise, experience in its market segments, and innovative work. With its construction management activities, Turner is among the leading providers in several building construction market segments, including healthcare, sports stadiums, education, airports, commercial offices, data centers, and sustainable green buildings, as recognized by the Engineering News-Record (ENR) magazine once again in 2025.

Turner primarily operates on the basis of a low-risk construction management contracting model. As part of its strategy, Turner is successfully pursuing opportunities in advanced technology markets such as data centers. The company also delivers services on building projects of all types and sizes throughout North America and around the world.

Turner company Dornan, headquartered in Ireland, is one of Europe's leading specialized mechanical, electrical, instrumentation, and engineering contractors with operations in Ireland, the UK, continental Europe, and the Nordic countries. Dornan provides services for complex large-scale projects, primarily in the high-tech sector. With the acquisition, which was completed in 2025, Turner is accelerating its growth strategy in Europe, where the company has identified opportunities for high-tech projects amounting to some EUR 20 billion.

Turner generates the vast majority of its sales in the non-residential building construction market in the United States. The outlook for the market in 2026 is generally positive with data centers, Turner's largest end market, being the most dynamic (Compound Annual Growth Rate (CAGR) 2024-2029 +16%, with AI data centers showing particularly strong growth at a CAGR of +42%). Elsewhere in other sizeable Group end markets, construction starts are forecast to show solid growth in 2026, both in institutional (+6%) and commercial projects (+7%).[1]

Turner Key Figures

Turner delivered another outstanding performance in 2025.

Sales were up a striking 34% year on year to EUR 25.8 billion driven by very strong organic revenue growth, particularly in data centers, as well as solid increases in the healthcare, education, sports and airports sectors. Dornan Engineering, the rapidly growing advanced-tech engineering business, achieved a strong performance in its first year as part of the HOCHTIEF group, off-setting the impact of foreign exchange headwinds.

Turner delivered outstanding **operational PBT** growth of 62% to EUR 921 million, above the top end of the recently increased guidance of EUR 850-900 million, and over 20% ahead of the indication the Group provided a year ago (EUR 660-750 million). Driven mainly by Turner's successful advanced-tech strategy, the operational PBT margin increased by 60 bps year on year to 3.6%, thus exceeding the previously indicated 3.5% target for 2026 a year earlier than planned.

[1] Dodge Construction Network, Outlook 2026 Ebook, September 2025

The quality of Turner's exceptional performance is illustrated by the strong net operating cash flow of over EUR 1.2 billion, an increase of EUR 523 million year on year. As a consequence, the company ended the year with a net cash position of EUR 3.3 billion, nearly EUR 0.2 billion above the previous year, even after closing the EUR 0.4 billion Dornan acquisition

Turner continued to report strong order momentum, with **new work** secured during the period of EUR 33.6 billion, up 44% fx-adjusted, driving another record **order backlog** level of EUR 37.7 billion, up 34% fx-adjusted.

Turner Outlook

For 2026, we expect Turner to achieve a further significant increase in operational profit before tax to USD 1.3bn to USD 1.35bn, an increase of 25 to 30%, subject to market conditions.

Turner: Key Figures

Operating cash flow	**1,296.3**	765.9	530.4
Net operating cash flow	**1,235.2**	712.3	522.9
Net cash (+)/net debt (-)	**3,270.7**	3,091.7	179.0
New orders	**33,603.3**	24,383.0	37.8%
Order backlog	**37,699.0**	31,930.0	18.1%

Note: Operational profits are adjusted for non-operational effects

Project highlights: New contracts in 2025[1]

The most noteworthy development during 2025 is the development of new contracts in the data center sector which have more than doubled year-on-year, reflecting Turner's experience and expertise that make it a highly thought-after provider for the construction of data centers.

New contracts in the reporting year include:

- Data center for Meta in Richland Parish, Louisiana: Turner is delivering this large-scale project as part of a consortium, with a planned investment volume of over EUR 9.2 billion.
- CoreWeave data center, Lancaster, Pennsylvania: CoreWeave announced its intent to invest more than USD 6 billion in a state-of-the-art data center to be built by Turner as part of a joint venture.
- Battery Park Resiliency project, New York City: After the pre-construction phase, Turner, in a joint venture, has been awarded the construction contract of this major resiliency project in Manhattan with a total contract volume of around EUR 1.5 bilion (USD 1.7 billion).
- Austin Convention Center, Texas: Turner and joint venture partners have been awarded an approximately EUR 1.1 billion contract to redevelop and expand the convention center.
- University of Cincinnati student housing complex in Ohio: This contract for approximately EUR 241 million will provide accommodation for more than 1,300 students in two buildings.

[1] The content in this section is not part of the statutory audit of the annual financial statements and consolidated financial statements in accordance with Section 317 of the German Commercial Code (HGB).

- Langley School District No. 35 Smith School Campus, British Columbia: Turner is constructing two school buildings for a total of 2,800 students, with a contract value of approximately EUR 143 million.
- Bakar ClimatEnginuity Hub at University of California, Berkeley: The sustainable five-story facility will provide teaching, research, and office space.
- New York Presbyterian Columbia University Irving Medical Center, New York: Turner is building a medical center for outpatient cancer treatment.
- AdventHealth – Avista New Hospital, Louisville, Colorado: Turner is expanding the hospital building with a five-story expansion that will provide 200 beds.
- Tang Wing at the Metropolitan Museum of Art, New York City: This project will increase the gallery space for 20th and 21st century art by almost 50%.
- PSE&G Melville Operations Center, New York: Turner is to deliver a new operations center for managing and maintaining the electrical transmission system throughout Long Island Lighting Company's service territory.
- Logan International Airport, Boston, Massachusetts: Turner is building a new connection between Terminals A and B, with a contract value of around EUR 177 million.
- 343 Madison Avenue, Manhattan, New York: A new 46-story office complex is being built in Midtown Manhattan.
- One Beverly Hills (Phase One), California: This luxury resort and destination project will consist of two residential towers, a hotel, and a club.
- Carraig Mhór, Cork, Ireland: Dornan is expanding the existing GE Healthcare production site. Among other things, a filling plant, multifunctional powder handling systems, and high-quality automation systems are being built.
- Data center, Netherlands: Dornan is constructing a 160 MW data center in four phases. The contract also includes mechanical and electrical services.

GADIGAL STATION, SYDNEY, AUSTRALIA

CPB Contractors has achieved a 6-Star Green Star As-Built certification for Gadigal Station from the Green Building Council of Australia. The station is part of the large-scale Sydney Metro City and Southwest project.

CIMIC

CIMIC Group is an engineering-led industrial, energy, natural resources, and civil infrastructure business. In Australia and the Asia-Pacific, CIMIC, through its operating companies, is the only company servicing the full life cycle of infrastructure and resources assets—from development and investment through construction to operations and maintenance.

CIMIC Group company CPB Contractors has been delivering complex infrastructure and building projects across all sectors of the construction industry for more than 90 years. The company's project teams deliver roads, rail, tunnelling, defense, building, health, renewables, and energy resources infrastructure.

UGL is a specialist end-to-end engineering, services and operations provider. The company keeps Australia moving through its transport manufacturing, maintenance and operations offering, and supports the energy sector through its renewables, power generation, resources and transmission operations. UGL is helping to shape the country through its major infrastructure projects and preparing for the future with its new energy, defense, telecommunications and technology expertise. In December, CIMIC announced the formation of a strategic partnership with Sojitz Corporation, under which Sojitz Group will acquire a 50% equity interest in UGL's transport business (UGL Transport), establishing a 50:50 joint ownership structure. The transaction values UGL Transport at approximately AUD 800 million (100% basis), with CIMIC realizing cash proceeds of approximately AUD 500 million. Sojitz is headquartered in Tokyo, Japan.

Sedgman is a provider of minerals processing and associated infrastructure solutions to the global resources industry. It delivers services in critical minerals including cobalt, lithium, nickel, rare earth minerals and vanadium, as well as in bulk minerals, precious and base metals, and industrial minerals. Sedgman partners with clients throughout the full project lifecycle, from initial concept design to delivery, ongoing operations and asset optimization.

Leighton Asia is an international construction company, delivering infrastructure projects throughout Asia. Established in 1974 and headquartered in Hong Kong, the company offers a comprehensive range of services across key sectors including civil infrastructure and buildings, advanced technology including data centers, energy and resources.

Pacific Partnerships is a leading infrastructure developer. The company drives innovative collaboration across CIMIC Group's collective expertise to create, fund, own, deliver and operate sustainable solutions.

CIMIC holds 60% of the Thiess Group which operates in the mining, infrastructure and resources sectors across Australia, Asia and the Americas. Its capabilities extend across the mine life cycle from engineering, asset management and maintenance services, extraction and haulage, civil and infrastructure, crushing and processing, and rehabilitation. Thiess partners with clients and communities across geographies, commodities, and cultures to deliver scalable and sustainable solutions in mining and beyond.

The market outlook for CIMIC is broadly positive. In Australia, non-residential construction spending is expected to increase by 9% in the 2025-2028 period.[1] Energy infrastructure spending is expected to be a key driver of growth with a three-year CAGR of 16%. As new grid connections and planning approvals progress, the pace of construction across wind, solar, and transmission infrastructure is anticipated to accelerate significantly.[2] Construction spending for data centers in Australia is expected to accelerate sharply as demand for AI and cloud computing grows. Total Australian data center capacity is expected to almost double from 1.6 gigawatt in 2025 to 3.1 gigawatt in 2028, with data center construction spending expected to increase to AUD 10.8 billion in 2028.[3] In South-East Asia, data center demand continues to accelerate, with the pipeline more than doubling to USD 102 billion[4] since 2024. The construction sector in Southeast Asia is one of the largest and fastest growing globally. Growth in the region is expected to reach close to 6% in 2026 and 2027. Momentum is supported by strong public budgets, rising Foreign Direct Investment, and large pipelines in transport, energy, manufacturing, and digital infrastructure.[5]

The Australian outsourced maintenance and services market continues to benefit from infrastructure investments to support population changes and aging assets. Asset owners are increasingly outsourcing infrastructure maintenance and services. In 2026 and 2027, this market is expected to grow over 7% and 3% respectively, with sector expansion across transport, utilities, and resources.[6] Australia is a major producer and exporter of key commodities and remains an increasingly important global source of critical minerals. With the focus on resource supply chain resilience increasing, Australia's production and importance in the sector is likely to increase. In 2026 and 2027, operations and maintenance activities in the resources sector are expected to increase by around 4% annually.[7]

CIMIC key figures

CIMIC delivered a steady performance in 2025.

Sales of EUR 10.6 billion were stable on a comparable basis with solid increases in strategic growth markets and despite large transport infrastructure projects winding down. The nominal increase was largely attributable to the additional four months full consolidation of Thiess, partly offset by foreign exchange rate movements.

Operational PBT of EUR 473 million was up 5% year on year accompanied by a solid margin performance, with the AUD 829 million PBT result consistent with the AUD 800-850 million guidance for the year. The result in Euros was impacted by the variation in AUD/EUR exchange rate. CIMIC's operational net profit of EUR 248 million was stable year on year on an f/x-adjusted basis.

Net operating cash flow pre-factoring increased EUR 43 million year on year. In particular, a strong second half net operating cash flow performance supported the EUR 366 million net cash improvement year on year which also reflected the impact of the divestment of 50% of UGL Transport as well as the sale of a data center project.

CIMIC's **order backlog** was solid at EUR 21.8 billion, up 3% year on year adjusted for the divestment of the UGL Transport stake during the fourth quarter of 2025 and f/x effects. **New orders** rose 6% year on year f/x-adjusted with growth across data centers, defense, and critical minerals.

CIMIC Outlook

For 2026, we expect CIMIC to achieve an operational profit before tax of AUD 780 to 830 million, plus 4% year on year and 10% on a comparable basis, subject to market conditions.

Order backlog	**21,809.3**	24,008.8	-9.2%

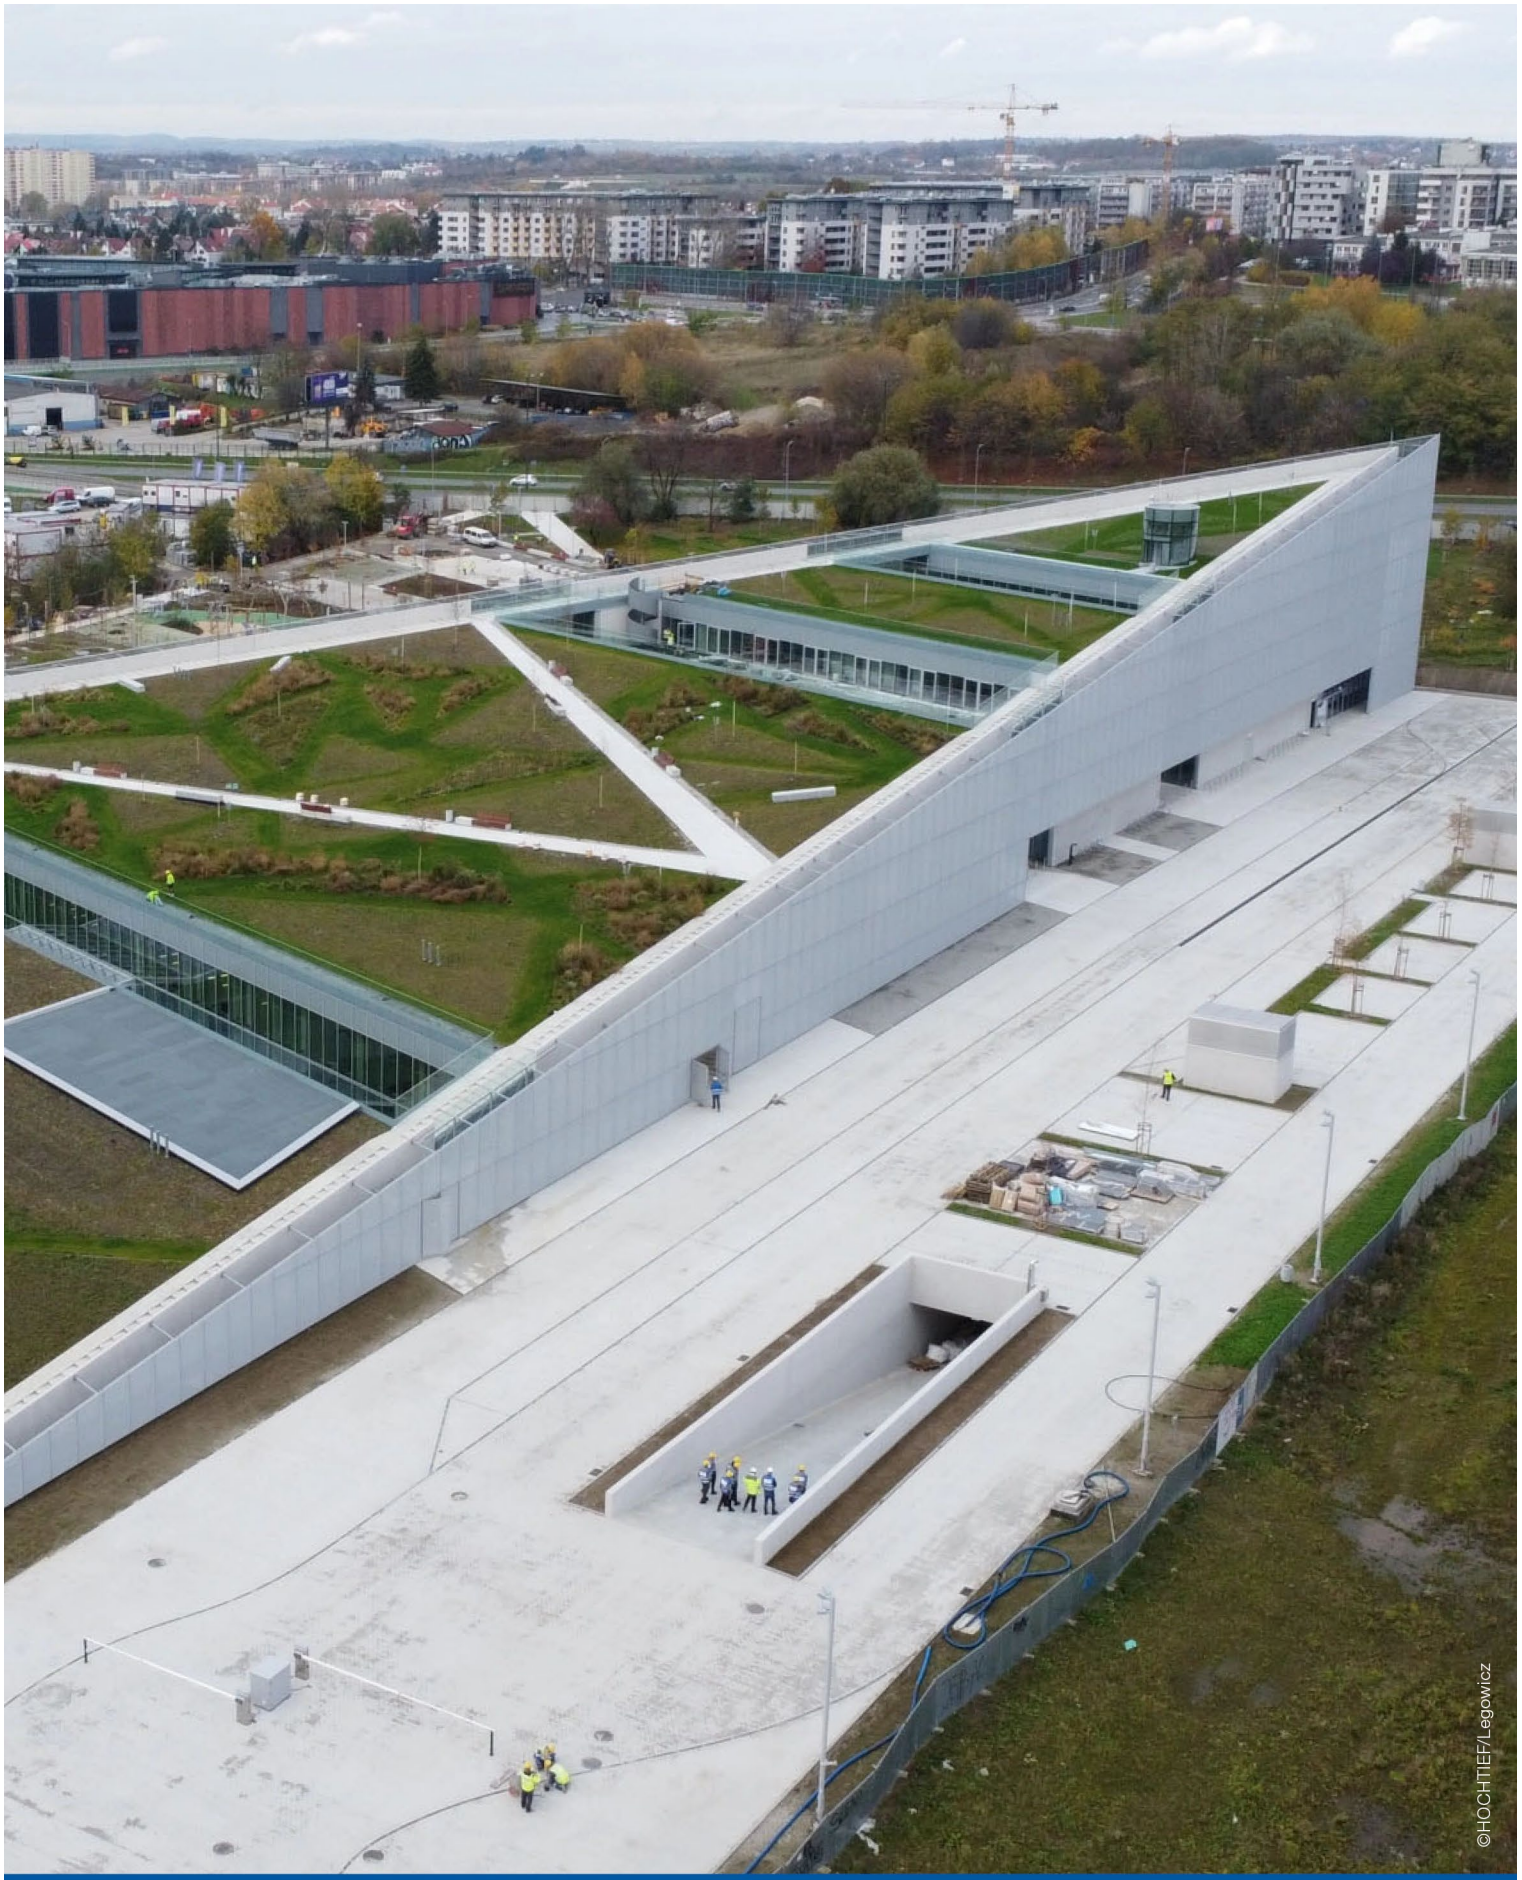
Project highlights: New contracts in 2025[1]

The CIMIC Group companies secured numerous new contracts in the reporting year. These include:

- 64-megawatt data center in Cyberjaya, Malaysia: Leighton Asia is carrying out the first phase of the design and construction for a multinational technology corporation.
- Muchea Battery, Western Australia: UGL is building a 164-megawatt/905-megawatt-hour battery storage asset north-east of Perth for Neoen and Tesla.
- Western Downs Battery, Queensland: UGL has been selected by Neoen and Tesla to construct Stage 3 the renewable energy storage project with a capacity of 305 megawatt/1,220 megawatt hours, following early completion of Stage 2.
- Vulcan Energy, Landau, Germany: Sedgman and HOCHTIEF Infrastructure have been appointed as the Engineering, Procurement and Construction Management contractor for Vulcan's Lionheart Project, delivering an end-to-end solution for the EUR 397 million Lithium Extraction Plant and EUR 337 million Central Lithium Plant. Additionally, HOCHTIEF will invest EUR 169 million in Vulcan and act as a cornerstone investor and preferred civil works supplier.
- Lithium de France program, France: Sedgman will provide front-end engineering design services for a largescale lithium project.
- Logan and Gold Coast Faster Rail, Brisbane, Queensland: CPB Contractors and UGL, as part of the ActivUs Alliance consortium, have been awarded the design and pre-construction contract for the main works package in this rail infrastructure project.
- Eastern Freeway, Victoria: CPB Contractors, as part of the Synergy consortium, is delivering an infrastructure upgrade project between Tram Road and Springvale Road.
- Gateway to Bruce Upgrade, Queensland: CPB Contractors has been selected to deliver this infrastructure project as part of the Gateway Connect joint venture, in which CIMIC has a 40% stake; the total contract value is some EUR 538 million.
- Perth Airport: CPB Contractors has been selected as part of the Skyway joint venture to construct a new runway and associated taxiways.
- Elan The Emperor residential project, Gurugram, India: Leighton Asia is building ten residential towers, each approximately 145 meters tall, for a leading real estate developer; the contract value is approximately EUR 113 million.
- Electricity infrastructure works, Wheatbelt region, Western Australia: UGL is to deliver key electricity infrastructure works for client Western Power.

[1] The content in this section is not part of the statutory audit of the annual financial statements and consolidated financial statements in accordance with Section 317 of the German Commercial Code (HGB).

- Fiber to the Node network upgrade, Queensland and New South Wales: UGL will provide fiber network design, access, construction, and installation services on behalf of client NBN Co over 3.5 years.
- Tangkam and Oakey Secondary Systems Replacement, west of Brisbane: UGL has been selected by Powerlink Queensland to carry out extensive works to replace the secondary systems in two substations.
- Bowen Basin, Queensland: Thiess has been awarded an approximately EUR 1.3 billion, three-year contract extension for full mining services.
- Eva Copper Mine project, Queensland: Thiess has secured an alliance agreement with Harmony to deliver multiple packages of work including mining services over five years. The mining scope is valued at approximately EUR 400 million.
- Northern Hub, Queensland: Thiess will continue to provide full mining services with revenue of approximately EUR 357 million over another three years.
- Kapuas Bara Utama, Central Kalimantan, Indonesia: Thiess will undertake all mining activities under a EUR 318 million contract.
- Karlawinda Gold Project, Pilbara region, Western Australia: Thiess company MACA has been awarded a five-year contract extension for full mining services.



MAŁOPOLSKA SCIENCE CENTER COGITEON, KRAKOW, POLAND

The iconic science center has received several awards, including the prize for barrier-free architecture and sophisticated technical solutions in the “Krakow Without Barriers” competition. The one-hectare roof garden offers visitors a view of Krakow and the nearby mountain ranges.

Engineering and Construction

The Engineering and Construction segment encompasses HOCHTIEF's activities in Europe, plus a (38.2%) stake in FlatironDragados, the second-largest civil engineering company in North America.

Our **European activities** comprise sustainable solutions for digital, social, energy, defense, and transportation infrastructure. The companies specialize in the entire asset and infrastructure project life cycle, including feasibility studies, design, planning, and investment, as well as construction, operation, and maintenance. The primary focus is on the German, Polish, Czech, Slovakian, Austrian, UK, Scandinavian, and Dutch markets. HOCHTIEF has an excellent reputation and is perceived as capable, trustworthy, reliable, and forward-looking.

HOCHTIEF Infrastructure executes transportation, energy, data center, EV battery, and building construction projects, providing services for all phases of project implementation. In this way, HOCHTIEF Infrastructure paves the way for sustainable, well-conceived growth in Germany and across Europe—for instance, through the construction of new buildings, bridges, roads, rail infrastructure, tunnels, airports, energy infrastructure, and maritime port facilities.

HOCHTIEF PPP Solutions provides services for public-sector clients and covers all phases of the infrastructure life cycle, from design and finance to construction and operation. Projects are executed efficiently in close collaboration with other HOCHTIEF units. Likewise under the umbrella of HOCHTIEF PPP Solutions, we develop innovative smart city concepts. These include sustainably constructed and operated data centers including cloud services as well as charging stations for electric vehicles—in all instances based on a full life-cycle approach and with a long-term perspective.

FlatironDragados is the second-largest civil engineering company in North America and delivers essential infrastructure projects. Resulting from the merger of the two North American companies Flatiron and Dragados, the company is headquartered in Atlanta, Georgia. HOCHTIEF has owned a 38.2% equity-accounted interest in the new entity since January 2025.

The European construction market is forecasted to see a gradual recovery expanding by 2.4% in 2026 and 2.2% in 2027. The combination of improving financial conditions, long-term infrastructure programs, and sustained renovation demand should help support broad growth from 2026 onward. Civil engineering remains the strongest and most stable component of the European construction cycle. The German government's 12-year, EUR 500 billion infrastructure fund approved during 2025 will see its first full-year of implementation in 2026, which should support a multi-year increase in demand beyond that period in the Group's single largest European market. The non-residential building sector is accelerating in 2026, supported by major renovation activities due to energy-performance requirements and the upgrading of ageing public and private facilities.[1] The civil infrastructure construction market in the United States is expected to see the highest real growth rates within the wider construction market at 3% in 2026 and 5% in 2027. Growth is broad based across roads, power, water, waste, and conservation markets, supported by surging demand for energy, an expectation of a renewed federal funding for the Infrastructure Investment and Jobs Act, demographic trends and increasing water usage for cooling by the industrial and data center sectors, according to FMI.[2]

[1] Euroconstruct, 100th Euroconstruct Conference, Press Release, November 2025
[2] FMI, 2025 North American Engineering and Construction Outlook, Fourth Quarter Edition, October 2025

Engineering and Construction key figures

Our Engineering and Construction activities achieved a solid performance in 2025.

The nominal year-on-year variations reflect the impact of the Flatiron-Dragados North America transaction, closed in January 2025, with the new combined company, FlatironDragados, equity-accounted with a 38.2% stake.

Sales of EUR 1.7 billion increased by 9% year on year on a comparable basis, adjusting for the FlatironDragados transaction and, thus, reflecting the growth in the European operations.

The business also delivered a strong increase in **operational PBT** to EUR 98 million, up 28% on a comparable basis, and exceeding the EUR 85-95 million FY 2025 guidance. The segment's operational net profit was 19% higher year on year at EUR 76 million.

The segment achieved a strong **cash flow** performance with the year-on-year variation reflecting the Flatiron deconsolidation impact. The solid year-end **net cash** position of EUR 871 million increased by EUR 84 million on a comparable basis.

Engineering and Construction Outlook

For 2026, we expect to achieve an operational profit before tax of EUR 125 million to EUR 140 million, an increase of 27 to 42% year on year, subject to market conditions.

Engineering and Construction: Key Figures

(EUR million)	2025	2024	Change yoy
Sales	**1,675.9**	3,628.8	-53.8%
EBITDA (adjusted)	**128.1**	178.9	-28.4%
Operational profit before tax/PBT	**98.3**	88.2	11.5%
Operational PBT margin (%)	**5.9**	2.4	350 bps
Operational net profit	**76.3**	64.3	18.7%
Nominal profit before tax/PBT	**79.2**	62.3	27.1%
Nominal net profit	**57.1**	40.4	41.3%
Operating cash flow	**220.1**	654.8	-434.7
Net operating cash flow	**155.8**	576.3	-420.5
Net cash (+)/net debt (-)	**871.1**	1,174.5	-303.4
New orders	**6,084.5**	4,395.4	38.4%
Order backlog	**12,957.0**	11,645.5	11.3%

Note: Operational profits are adjusted for non-operational effects

Project highlights: new contracts in 2025[1]

The HOCHTIEF companies secured numerous new contracts in the reporting year. These include:

HOCHTIEF in Europe

- Nuclear power and infrastructure framework contract, Sellafield, UK: As part of the Infrastructure Delivery Partnership, HOCHTIEF has been awarded a major nuclear power and infrastructure framework contract for up to EUR 685 million.

[1] The content in this section is not part of the statutory audit of the annual financial statements and consolidated financial statements in accordance with Section 317 of the German Commercial Code (HGB).

- Vulcan Energy, Landau, Germany: Sedgman and HOCHTIEF Infrastructure have been appointed as the Engineering, Procurement and Construction Management contractor for Vulcan's Lionheart Project, delivering an end-to-end solution for the EUR 397 million Lithium Extraction Plant and EUR 337 million Central Lithium Plant. Additionally, HOCHTIEF will invest EUR 169 million in Vulcan and act as a cornerstone investor and preferred civil works supplier.
- A59/A40 highways, Duisburg, Germany: In a joint venture, HOCHTIEF is expanding the A59 highway over a length of approximately two kilometers and is renewing the associated A40 highway interchange with a total contract value of around EUR 450 million.
- Second main line of the S-Bahn rail network in Munich, Germany: HOCHTIEF, together with a consortium partner, has been awarded another major contract by Deutsche Bahn for the second main line of the city's urban rapid transport network, with a total contract value in the high three-digit million-Euro range.
- Rhine right bank rail route refurbishment, Phase 1, Germany: HOCHTIEF is delivering Phase 1 of the project for Deutsche Bahn comprising the general refurbishment of a 42-kilometer double-track section for a total contract value of EUR 172 million.
- A12/A15 PPP highway project near Arnhem, Netherlands: The GelreGroen joint venture, in which HOCHTIEF holds a 40% stake, is extending the A15 highway by twelve kilometers and adding new lanes to widen parts of the A12 and A15.
- Expansion of Rosenheim Technical University of Applied Sciences, Germany: HOCHTIEF is expanding the university with a technology park and a student center for a total contract value of almost EUR 190 million.
- Moxy Hotel, Hamburg, Germany: HOCHTIEF is building the new Moxy Hotel and expanding the Hotel Atlantic Kempinski on Alstertwiete. In addition, the two buildings are being connected.
- New research building for the University of Duisburg-Essen, Germany: The five-story, sustainable research building will serve as an interdisciplinary research center.
- New Fördeklinikum Katharinen-Hospital, Flensburg, Germany: This healthcare project is the first hospital new-build project in Germany using integrated project delivery and a multi-party contract.
- Neue Oberschule high school extension, Braunschweig, Germany: This PPP project comprises the construction of a new extension to the high school together with extensive renovation work on existing buildings.
- My Forest residential complex, Poland: HOCHTIEF is modernizing and renovating two service and repair sheds plus rail track, overhead line, and supply infrastructure.
- Design contract for four high-performance onshore converter stations, Germany: The converter stations, each with a capacity of two gigawatts, are essential to an electricity highway project spanning some 710 kilometers.

FlatironDragados

- SR 400 Express Lanes, Atlanta, Georgia: Under a joint venture, FlatironDragados is delivering this project with a contract value of around EUR 2.1 billion for the construction of two lanes in each direction over approximately 25 kilometers, plus an additional lane.
- Battery Park Resiliency project, New York City: In a joint venture with Turner, SPC Construction, a subsidiary of FlatironDragados, has been awarded the construction contract of this major resiliency project in Manhattan with a total contract volume of around EUR 1.5 billion (USD 1.7 billion).
- Long Bridge North, Washington, D.C.: Similarly under a joint venture, FlatironDragados has been awarded the contract for the Long Bridge North project to build an approximately 1.6-kilometer rail link for a total contract value of around EUR 900 million.
- Franconia-Springfield Bypass, Virginia: Another important rail project with a total contract value of some EUR 376 million is the Franconia-Springfield Bypass, which is being built as part of a joint venture.
- I-275 (State Route 93), Pinellas County, Florida: This project, with a contract value of around EUR 313 million, involves the expansion of a busy corridor to improve traffic flow.
- Dallas Fort Worth International Airport Airfield Safety & Efficiency Improvements (Package 3), Texas: FlatironDragados is modernizing runway facilities for a contract value of around EUR 107 million.
- Wild Horse Reservoir, Colorado: This large-scale reservoir project, which is being delivered under a joint venture, will cover the region's long-term water needs.

TOLL MOTORWAY, FRANCE

Abertis operates approximately 1,800 kilometers of motorway in France through the company SANEF.

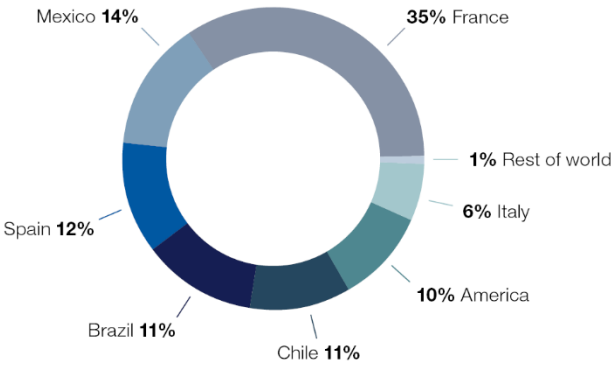
Abertis

Since June 2018, HOCHTIEF owns a 20% stake (minus one share) in Abertis HoldCo, the direct owner of 99.1% of Abertis Infraestructuras, S.A. (Abertis). Abertis is a leading international toll road operator with a portfolio of brownfield assets stretching across 15 countries, 34 concessions and around 8,000 kilometers of toll roads. This investment is accounted for using the equity method and the net profit contribution is included as an operating item in the Group's EBITDA.

The contribution to the HOCHTIEF Group resulting from the **Abertis** investment reflects the operating performance of Abertis, a non-cash purchase price allocation (PPA) expense as well as holding company costs.

In October 2025, Abertis shareholders have injected EUR 400 million of equity to support the company's growth strategy. HOCHTIEF participated with an EUR 80 million equity investment, aligned with its 20% ownership.

EBITDA 2025 by country



Key developments at Abertis

Abertis achieved a solid operational performance in 2025.

Average daily traffic at the toll road company increased by 2% year on year. **Revenues** were up 4% with **EBITDA** 6% higher, both on a comparable basis, reflecting a solid underlying business performance.

The operational net profit pre-PPA amounted to EUR 701 million with the year-on-year variation including adverse tax effects in France.

The operational and nominal contribution from our 20% stake in Abertis after PPA amounted to EUR 58 million.

In February 2025, Abertis announced the acquisition of a majority stake (51.2%) in the A-63 toll road concession in France. The 104-kilometer toll road is a strategic corridor between Spain and northern Europe, linking Bordeaux and the towns of Bayonne, Biarritz, Anglet and Saint-Jean-de-Luz, a major tourist region close to the Spanish border. The acquisition enhances Abertis' portfolio and financial strength, with this mature and long dated asset that has been operating since 2013 and with potential for growth over its remaining 26 years of life.

In December 2025, Abertis has reached an agreement to acquire 49.99% of Túnels de Barcelona i Cadí concession, which operates the access highway to Barcelona via Vallvidrera from Sant Cugat del Vallès and the route connecting the regions of Berguedà and Cerdaña. This is a 46-kilometer concession asset which began operations in 2013 and is scheduled to expire in 2037. The transaction increases Abertis' presence in Catalonia and strengthens its position in Spain, where it continues to pursue growth by taking advantage of emerging opportunities.

In November 2025, Arteris, a subsidiary of Abertis and one of the largest highway operators in Brazil, won the tender published by the Brazilian National Land Transport Agency to continue operating the BR-101/RJ Norte highway until 2047, through its concessionaire Autopista Fluminense. This project represents a strategic opportunity for Abertis by extending a relevant asset in its portfolio, securing long-term revenues, and optimizing its financial structure in the country. Arteris has operated the BR-101/RJ Norte since 2008, a key 322 km-asset that connects Rio de Janeiro with metropolitan areas, serving 9.4 million inhabitants in 13 municipalities of Rio de Janeiro.

A **dividend** of approximately EUR 600 million (HOCHTIEF share EUR 119 million) was paid by Abertis during the second quarter of 2025.

Abertis Outlook

We expect Abertis to deliver a similar operational result in 2026 compared to the EUR 58 million in 2025.

Abertis: Key Figures

(EUR million)	2025	2024	Change yoy
Operating revenues	**6,149**	6,072	1%
EBITDA	**4,373**	4,292	2%
Operational net profit pre-PPA	**701**	801	-12%
Net profit pre-PPA	**701**	324	116%

Abertis segment result (20% stake)

(EUR million)	2025	2024	Change yoy
Nominal result[1]	**58.3**	(13.6)	71.9
Operational result[2]	**58.3**	80.9	-22.6
Abertis—dividend received	**118.7**	118.7	0.0

General basis for preparation of the sustainability statement

This sustainability statement also includes the non-financial reporting for 2025, in accordance with Sections 315b and 315c of the German Commercial Code (HGB) and Article 8 of Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment, and amending Regulation (EU) 2019/2088. The requirements of the European Sustainability Reporting Standards (ESRS), in accordance with the European Union's Corporate Sustainability Reporting Directive (CSRD), have been applied in their entirety in the preparation of this Sustainability Report. The sustainability statement is based on the information stated to the best knowledge of all those involved. We do not make use of the exemptions from disclosure under ESRS 1 Section 7.7 or under Article 19a(3) and Article 29a(3) of Directive 2013/34/EU.

The sustainability statement has been prepared on a consolidated basis. In accordance with the scope of the consolidated financial statements, it covers the activities of the operating, consolidated companies of the Turner, CIMIC, and Engineering and Construction segments as of December 31, 2025. HOCHTIEF Aktiengesellschaft is also included in the reporting, but no separate disclosure is made.

This presentation corresponds to the HOCHTIEF Group subsidiaries included in the financial key performance indicators. For a list of the entities included in the scope of consolidation, please refer to the Notes to the Consolidated Financial Statements in this report.

As a global provider of infrastructure solutions, our activities mainly comprise construction management services, infrastructure construction, and other infrastructure services. This means upstream and downstream value chain activities play an important role with regard to the sustainability of the entire industry and our company. For this reason, the metrics for these activities are included in our reporting. The responsible management of procurement services plays a key role here, as does the energy-efficient use of our completed buildings and infrastructure projects.

HOCHTIEF has established Group-wide principles that apply for all employees involved in our worldwide operations and for third parties contracted by HOCHTIEF. These principles align with the HOCHTIEF Code of Conduct and the HOCHTIEF Code of Conduct for Business Partners. This includes collaborating with our suppliers, subcontractors, and other business partners, together with promoting and reinforcing their responsibility within their own operations and supply chains. This is why we have defined an underlying, multi-stage risk management

process that serves as the basis for evaluating our supply chain. Our purpose here is to ensure that ESG risks and/or violations are identified at an early stage so that risks can be minimized and violations rectified by means of targeted corrective action plans. Furthermore, our policies, actions, and targets are geared toward fostering good collaboration with our business partners and subcontractors. Together with our customers and clients, we aim to actively propose sustainable solutions across the entire project life cycle and so avoid, or minimize as far as possible, negative environmental and social impacts. In accordance with the Sustainability Plan 2025, HOCHTIEF targets climate neutrality (net zero) by 2045.

BP-2

Disclosures in relation to specific circumstances

Time horizons

The HOCHTIEF Group has revised the definitions of time horizons for the purposes of ESRS 1.

- Short-term: one year, corresponding to the HOCHTIEF Group's reporting year (January 1 to December 31)
- Medium-term: five-year period, starting at the end of a reporting year
- Long-term: beyond five years

The specified time horizons as specified in the ESRS apply to all ESRS topics covered except ESRS E1 Climate Change, for which longer time horizons are used. This exception is based on the assessment that the time horizons proposed in the ESRS are too short for adequately addressing the specific phenomena and challenges of climate change. The time horizons for climate change are therefore aligned with the strategic targets and actions planned to be achieved and implemented in the HOCHTIEF Group over the long term:

- Short-term: up to five years
- Medium-term: five to 15 years
- Long-term: from 15 years to 2045

Value chain estimation

The parameters referred to in this sustainability statement include data on our upstream and downstream value chain activities that was determined using estimates. This applies to the metrics in the topic-specific sections on climate change and business conduct. For these metrics in the respective topical standards sections, we expressly state the upstream and downstream activities for which estimates have been made, including a description of the basis for preparation and the resulting level of accuracy.

Data completeness, reliability, and quality[1]

HOCHTIEF aims to maintain and continuously improve on the high standards of completeness, reliability, and hence also quality of the sustainability/ESG data collected throughout the Group. To this end, we intend, for instance, to further improve measuring accuracy and make increasing use of project-based data collection. In the areas of environment (E), social (S), governance (G), and innovation and digital transformation we are systematically expanding the consistency and precision of data collection and strengthening the uniform application of defined processes and criteria in all HOCHTIEF companies. In order to ensure full coverage in sustainability/ESG reporting across the entire consolidated Group, we apply a set quality hierarchy in our data collection processes. This is as follows:

- Primary data: The preferred data source, and thus the data collection basis with the highest priority in the HOCHTIEF Group, is direct measurement (where applicable on site/on project), meaning first-hand data. Examples include IoT-enabled meters to record electricity and water consumption on projects.

- Secondary data: Calculations based on existing information or databases, such as invoicing volumes or industry-specific standards and statistics. This is the second level, prioritized where primary data is unavailable.

- Estimated data: Calculations using industry-specific or science-based estimation methods. These can include extrapolations based on industry-specific empirical values or estimates using science-based methodologies. Estimates are used when neither primary nor secondary data is available.

For each reporting item, the goal is to use the best available evidence. Where primary data is available and appropriate, it should be used; where well-documented secondary data is equally appropriate, it is also acceptable. If neither primary nor secondary data is available at the end of the period, an estimate is permitted. Although our primary goal is to gradually increase the granularity of data collection, we prioritize complete and verifiable documentation for each quarterly and annual closing and therefore also accept the use of appropriate, well-documented estimation methods where necessary. The plausibility of the data is validated across the Group at various levels—first at a decentralized basis in the operational units and then centrally at Group level.

Sources of estimation and outcome uncertainty

Where quantitative parameters in the sustainability statement are subject to measurement uncertainty due, for example, to having been determined on the basis of secondary data or estimates, we state this fact accordingly in the topic-specific sections.

Changes in preparation of sustainability information

As in previous years, this sustainability statement is prepared in accordance with the German CSR Directive Implementation Act (CSR-RUG) (Section 289c of the German Commercial Code (HGB)), which is the German implementation of the European Non-financial Reporting Directive. As a reporting framework, as in the prior year, we reference the European Sustainability Reporting Standards (ESRS) under the Corporate Sustainability Reporting Directive (CSRD).

For the 2025 reporting year, CIMIC Group company Thiess is consolidated in the HOCHTIEF Group for the entire calendar year (i.e., for all twelve months). In the prior year, CIMIC increased its stake in Thiess to 60% (2023: 50%, equity-accounted), resulting in Thiess being consolidated in the HOCHTIEF Group and integrated in all sustainability information and data for eight months of 2024.

[1] Disclosure pursuant to ESRS 2, paragraph 77 (b): The metrics in this sustainability statement have not been additionally validated by an external body other than the assurance provider.

In January 2025, HOCHTIEF completed the strategic acquisition of 100% of Dornan Engineering, a leading provider of advanced-tech mechanical and electrical engineering services headquartered in Ireland. The Flatiron-Dragados transaction was also completed at the start of the year, with HOCHTIEF holding a 38.2% interest in the new company, which is accounted for in the consolidated financial statements using the equity method.

This results in the following significant changes for the consolidation of the sustainability information and the 2025 annual financial statements: Thiess is consolidated for twelve months in 2025 (2024: eight months). Dornan Engineering is consolidated in the HOCHTIEF Group for the first time in 2025. Flatiron, which was still consolidated in 2024, ceased to be part of the HOCHTIEF Group's scope of consolidation from January 1, 2025.

The current non-financial Group data has only limited comparability with the prior year and earlier reporting years due to changes in the scope of consolidation. For this reason, the topic-specific sections of this sustainability statement consistently relate to both the consolidated ESG data for 2025 and the established HOCHTIEF Sustainability Plan 2025. This was developed by all consolidated Group companies in 2021 and adopted by the Executive Board. It entered into force at the beginning of 2022. The HOCHTIEF Sustainability Plan 2025 specifies targets and long-term commitments for the measurement of Group performance in the dimensions of environment (E), social affairs (S), governance (G), and innovation and digital transformation (H). The activities of Thiess and Dornan Engineering are not included in this, as Thiess has only been consolidated in the HOCHTIEF Group since mid-2024 and Dornan Engineering since the beginning of the current reporting year. Conversely, Flatiron, which as of 2021 was still consolidated as a HOCHTIEF Group company, continues to be included in the reporting in accordance with the HOCHTIEF Sustainability Plan 2025 although it ceased to be consolidated in the HOCHTIEF Group from the beginning of 2025. The targets formulated in the Sustainability Plan 2025 therefore relate to the companies in the Group structure as of 2021.

In the topic-specific sections of this sustainability statement, in which targets from the HOCHTIEF Sustainability Plan 2025 are presented, we report the metrics for the 2025 reporting year both for the consolidated group as of 2025 and on the basis of the HOCHTIEF Sustainability Plan 2025. This ensures verifiability and comparability, enabling our stakeholders to clearly and reliably follow data aggregation and performance.

Any departures from this presentation are expressly marked and the reasons stated. The data reported on the basis of the Sustainability Plan 2025 is not part of the audit carried out by the auditor.

The activities of Thiess and Dornan Engineering, together with the deconsolidation of Flatiron, were taken into account in full in the double materiality assessment for the HOCHTIEF Group and in the assessment of impacts, risks, and opportunities (IROs).

Reporting in prior periods

Prior-period errors identified are disclosed and explained in the topic-specific sections. This applies to the following topic-specific sections: Own workforce, Climate change, and Taxonomy Regulation.

Disclosures stemming from other legislation or generally accepted sustainability reporting pronouncements

This Group Report serves as our report on progress in implementing the UN Global Compact principles (www.unglobalcompact.org[1]) and is published on the organization's websites. An overview of HOCHTIEF's contribution to the United Nations Sustainable Development Goals is provided under Sustainable Development Goals at HOCHTIEF[2].

Disclosures pursuant to Article 8 of Regulation (EU) 2020/852 of the European Parliament and the Council as well as disclosures pursuant to the European Commission Delegated Regulations (EU Taxonomy) are included in this sustainability statement and are presented for the environmental objectives specified in the Taxonomy Regulation.

[2] This is a further reference. The Sustainable Development Goals section is not subject to the assurance engagement in accordance with ISAE 3000 (Revised) to obtain limited assurance regarding the Group Sustainability Statement prepared by HOCHTIEF Aktiengesellschaft, Essen.

A Incorporation by reference

For the sake of clarity and to avoid duplication in this sustainability statement, information prescribed by the disclosure requirements of an ESRS is in some instances incorporated by reference. The disclosure requirements incorporated by reference are shown in the following list:

ESRS disclosure requirement for sustainability reporting	Paragraph in standard	Description of the disclosure requirement	References
GOV-5	36 a, 36 b, 36 c, 36 d, 36 e	Risk management and internal control processes	Opportunities and Risks Report
SBM-1	40 a i	Groups of products and/or services offered	Markets and operating environment, and Group Structure and Business Activities
SBM-1	40 a ii	Significant markets and/or customer groups served	Markets and operating environment, and Group Structure and Business Activities
SBM-1	40 e, 40 f, 40 g	Significant products and/or services, and significant markets and customer groups, in relation to the company's sustainability-related goals; strategy in relation to sustainability matters	Goals and strategies
SBM-1	42 a, 42 b	HOCHTIEF business model	Group Structure and Business Activities
IRO-1	53e	Integration of IRO management into the overall risk management process	Opportunities and Risks Report

Governance

GOV-1

The role of the administrative, management, and supervisory bodies as well as information provided to and sustainability matters addressed by the undertaking's administrative, management, and supervisory bodies

For the composition of the Executive Board, the Supervisory Board aims for an appropriate "Diversity of Minds." This comprises broad diversity with regard to internationality as well as educational and professional background. The Supervisory Board assesses the achievement of this goal—for instance, on the basis of the following specific indicators:

- Adequate share of members with an international background (based, for example, on origin or extensive professional experience abroad), ideally with a connection to the regions in which HOCHTIEF operates;
- Adequate diversity (women/men) with regard to educational and professional background.

Moreover, the Supervisory Board has stipulated an age limit for members of the Executive Board. Accordingly, a member of the Executive Board may not be older than 69 at the moment of his or her appointment.

The Executive Board of HOCHTIEF Aktiengesellschaft currently consists of two women and two men, corresponding to a gender distribution of 50% to 50%. The members of the Executive Board are as follows:

- Juan Santamaría Cases—Chief Executive Officer (CEO)
- Christa Andresky—Member of the Executive Board and Chief Financial Officer (CFO)
- Ángel Muriel Bernal—Member of the Executive Board and Chief Operating Officer (COO)
- Martina Steffen—Member of the Executive Board, Labor Director and Chief Sustainability Officer (CSO)

The Executive Board has one member who holds a degree in construction engineering. In addition, the Executive Board includes three members with degrees in business or accreditation as auditors. All members of the Executive Board have many years' experience in the construction industry or related sectors, including from employment within the HOCHTIEF Group. This expertise enables the members of the Executive Board to assess significant impacts, risks, and opportunities within the Group and to define targeted control measures.

- Three members of the Executive Board have lived and/or worked abroad.
- Three members of the Executive Board (additionally) have foreign nationality (Spain/Australia/USA).
- The age limit specified for members of the Executive Board has been duly observed in the appointment of all members.

Under the two-tier board system, in accordance with the German Stock Corporations Act, management of the company is the responsibility of the Executive Board. In the exercise of its responsibilities, it must always weigh the impacts, risks, and opportunities in accordance with applicable law (in line with the business judgment rule). The Executive Board manages the company's business under the collective responsibility of all of its members. It determines the entrepreneurial goals, fundamental strategic direction, enterprise policies, and organization of the Group. The Executive Board has adopted a Code of Procedure. A Schedule of Responsibilities specifies the allocation of responsibilities. All changes are proposed by the Chairman of the Executive Board, approved by the Executive Board, and reported to the Chairman of the Supervisory Board.

The Executive Board manages the company's business collectively on the basis of its general responsibility, in accordance with applicable law, and under its own responsibility in line with agreed uniform objectives. Each member of the Executive Board acts independently within his or her remit, the interests of which he or she nevertheless subordinates to the overall benefit of the company, while coordinating with the other members of the Executive Board on matters within his or her remit that affect their areas of responsibility or the overall

interests of the company or the Group. The members of the Executive Board work together collegially and keep each other informed of all significant events and business developments within their respective remits. One member of the Executive Board is responsible for sustainability and holds the position of Chief Sustainability Officer (CSO). The Executive Board meets regularly with the Sustainability corporate department to discuss attainment of the HOCHTIEF Sustainability Plan targets and to keep abreast of the Plan's progress. A detailed description of the sustainability and governance structure is provided in one of the following paragraphs.

In accordance with applicable law, the Articles of Association of HOCHTIEF Aktiengesellschaft and the Rules of Procedure for the Executive Board and Supervisory Board of HOCHTIEF Aktiengesellschaft, the Executive Board regularly reports to the Supervisory Board on the financial situation and development of the company and the Group, significant transactions, and the current earnings situation, including the risk situation and risk management. The Executive Board also provides the Supervisory Board with full information outside of meetings with regard to particularly significant or urgent projects and occurrences. At least once annually, the Chief Sustainability Officer briefs the Supervisory Board's Audit/Sustainability Committee on sustainability issues.

Under Sections 96 (1) and (2) and 101 (1) AktG, Sections 1, 6, and 7 (1) Sentence 2 read in conjunction with Sentence 1 No. 2 of the German Codetermination Act (MitbestG), and Section 9 (1) of the Articles of Association, the Supervisory Board of HOCHTIEF Aktiengesellschaft comprises eight members to be elected by the Annual General Meeting (as shareholder representatives) and eight members to be elected by the employees (as employee representatives). The eight shareholder representatives (100% of the shareholder representatives) are independent of the company and the Executive Board; four shareholder representatives (50% of shareholder representatives) are also independent of the controlling shareholder (ACS, Actividades de Construcción y Servicios, S.A.).

In order to implement a diversity policy for the Supervisory Board, the latter has set targets for its composition and adopted a profile of skills and expertise for the Supervisory Board as a whole. The objective is for the Supervisory Board to be composed such that it is able to provide professional control and advice to the Executive Board. In addition, the Supervisory Board is to be composed in such a way that its members as a group possess the knowledge, ability, and professional experience required to properly complete its tasks. In accordance with the Stock Corporations Act, the Supervisory Board of HOCHTIEF Aktiengesellschaft comprises at least 30% women and at least 30% men. As of December 31, 2025, the composition of the Supervisory Board of HOCHTIEF Aktiengesellschaft was 43.75% women and 56.25% men. The members of the Supervisory Board possess the skills and expertise considered material in light of the HOCHTIEF Group's activities as a global infrastructure group. This includes international and foreign experience. It also includes sustainability matters of significance to the company. In this connection, the Supervisory Board has adopted a skills matrix outlining the skills assigned to each member. This is reviewed annually to ensure that it is up to date. Skills covered include compliance, sustainability, and IT/cybersecurity. This ensures a broad distribution of capabilities within the Supervisory Board. The skills matrix also ensures that topics related to the company's material impacts, risks, and opportunities are suitably addressed. During the reporting period, the Executive Board member responsible for sustainability reported to the Supervisory Board on sustainability issues, with a primary focus on the EU reporting requirements under ESRS.

GOV-2

Sustainability organization and governance

The Chief Sustainability Officer (CSO) is a member of the Executive Board of HOCHTIEF Aktiengesellschaft and holds overall responsibility for sustainability within the HOCHTIEF Group. The CSO reports to the Audit/Sustainability Committee of the Supervisory Board. For management and control activities, the CSO is supported by a Group-wide Sustainability Committee. This comprises representatives of the Executive Board and of the Group companies, together with the Sustainability Core Team. The committee meets three to four times a year. The CSO has ultimate responsibility for monitoring and implementing sustainability-related policies and targets.

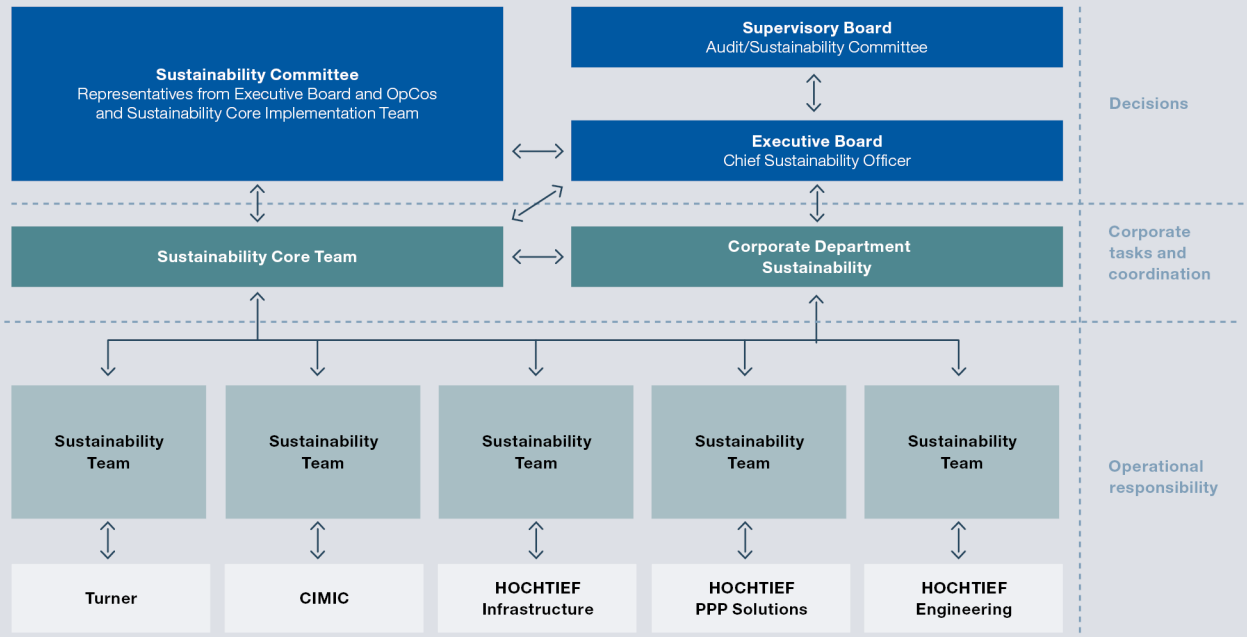
The Sustainability corporate department brings together and coordinates sustainability activities for the HOCHTIEF Group. It advises the Executive Board, the corporate departments, and the operational units on sustainability issues. The Sustainability corporate department is also the point of contact for internal and external stakeholders. This makes it possible for all material impacts, risks, and opportunities identified to be addressed by both the dedicated Sustainability corporate department and the Executive Board.

The department's main tasks include implementing the Sustainability Plan 2025 and developing new sustainability targets, integrated analysis of the environmental, social, and governance (ESG) issues as well as developing and enhancing data monitoring and reporting in order to measure, verify, and report on the sustainable transformation. Senior executives are appointed for the areas of environment (E), social (S), and governance (G), who report directly to the Executive Board. The responsibilities and processes for implementing innovation and digital transformation within the HOCHTIEF Group are described in the Innovation and Digital Transformation section. This ensures efficient management of ESG topics and of the material impacts, risks, and opportunities. The sustainability targets that have been developed are presented to the Sustainability Committee and approved by the Executive Board.

In addition, there is the Sustainability Core Team, comprising the CSO, sustainability and ESG specialists, as well as innovation and communications specialists. The Sustainability Core Implementation Team meets on a weekly basis and is tasked with continuously analyzing and developing the Group's sustainability on the basis of the thematic areas described above.

Each operating company in the HOCHTIEF segments has a Sustainability Team. These teams ensure that the HOCHTIEF Sustainability Plan 2025 is put into practice across the Group. The Sustainability Teams report at regular intervals to the Sustainability Core Team and the Corporate Department Sustainability.

Sustainability Organization and Governance



Close collaboration between the Executive Board, the aforementioned committees, the Sustainability corporate department, the Sustainability Core Team and the operating companies enables all significant impacts, risks, and opportunities to be systematically addressed and managed via defined processes and reporting lines. In addition, there is close internal coordination with Corporate Controlling on all material impacts, risks, and opportunities related to sustainability topics. This optimizes the implementation of the core elements of due diligence in the company, through which actions and policies are assessed for effectiveness and addressed as needed.

Achievement of the targets in the HOCHTIEF Sustainability Plan 2025 is monitored by the Sustainability corporate department and the ESG officers, and progress is regularly assessed and reported to the Executive Board as well as the Audit/Sustainability Committee of the Supervisory Board.

GOV-3

Integration of sustainability-related performance in incentive schemes

As is explained in more detail in the Goals and strategies section, sustainability is an integral part of HOCHTIEF's Group strategy. HOCHTIEF systematically takes ESG aspects into account when making strategic decisions in order to create long-term value and ensure responsible business conduct.

The current compensation system for members of the Executive Board is geared toward long-term, sustainable management. Criteria for determining the appropriateness of compensation comprise the duties of each member of the Executive Board, their personal performance, the economic situation, the performance and future prospects of the Company, as well as the customary level of compensation, taking peer companies into account. The objective of the compensation system is to support successful and sustainable management by linking the compensation of Executive Board members to both the short-term and long-term performance of the Company. The Supervisory Board regularly reviews the system and the appropriateness of individual compensation components as well as of compensation as a whole. In this connection, it considers the amount and structure of executive board compensation at peer companies (horizontal benchmark) and the ratio of Executive Board compensation to employee compensation, including over time (vertical benchmark).

20% of variable compensation for members of the Executive Board is tied to non-financial environmental, social, and governance (ESG) targets. The non-financial targets in 2025 relate to the development of the Lost Time Injury Frequency Rate (LTIFR) as a health and safety metric with a weighting of 15% and to the reduction of carbon emissions with a weighting of 5%. The Supervisory Board as a whole is responsible for adopting resolutions on the compensation system for members of the Executive Board. Target achievement is continuously monitored by regularly analyzing the metrics in order to ensure transparent and sustainable management. Details of the compensation components and the variable compensation for members of the Executive Board can be found in the Compensation Report.

Further information on the inclusion of sustainability-related components in the remuneration systems of HOCHTIEF companies is provided in the progress report on the Sustainability Plan 2025[1], which is not subject to reporting in accordance with ESRS.

[1] This is a further reference. The HOCHTIEF Sustainability Plan 2025 section and the progress report presented there are not subject to the assurance engagement in accordance with ISAE 3000 (Revised) to obtain limited assurance regarding the Group Sustainability Statement prepared by HOCHTIEF Aktiengesellschaft, Essen.

GOV-4

Statement on due diligence

A mapping of the information provided in this sustainability statement about the due diligence process at HOCHTIEF is provided in the following.

Core element of due diligence	Sections of the sustainability statement Application requirements[1]	Page number
(a) **Embedding due diligence in the undertaking's governance, strategy, and business model**	ESRS 2 GOV 2—Information provided to and sustainability matters addressed by the undertaking's administrative, management, and supervisory bodies	101
	ESRS 2 GOV-3—Integration of sustainability-related performance in incentive schemes	103
	ESRS 2 SBM-3—Material impacts, risks, and opportunities and their interaction with strategy and business model	112
(b) **Engaging with affected stakeholders in all key steps of the due diligence**	ESRS 2 SBM-2—Interests and views of stakeholders	110
(c) **Identifying and assessing adverse impacts**	IRO-1—Description of the process to identify and assess material impacts, risks, and opportunities, including further explanations on IRO-1 in the topical standards	122
	ESRS 2 SBM-3—Material impacts, risks, and opportunities and their interaction with strategy and business model	112
(d) **Taking actions to address those adverse impacts**	All topical standards—Policies adopted to manage material sustainability matters (including ESRS 2 MDR-P Minimum disclosure requirements)	137, 162, 174, 184, 196, 226, 245, 252, 261, 269
	All topical standards—Actions and resources in relation to material sustainability matters (including ESRS 2 MDR-A Minimum disclosure requirements)	144, 165, 177, 188, 200, 231, 249, 257, 272
	Topical standard ESRS E1—E1-1 Transition plan for climate change mitigation	139
(e) **Tracking the effectiveness of these efforts and communicating**	All topical standards—Targets and metrics in relation to material sustainability matters (including ESRS 2 MDR-T Minimum disclosure requirements)	149, 168, 179, 191, 203, 231, 249, 257, 274

[1] All sections must be viewed together with their associated application requirements.

GOV-5

Risk management and internal controls over sustainability reporting

Sustainability reporting is provided annually as part of the Group Report. The sustainability/ESG data to be reported is specified in accordance with the legal reporting requirements applicable to the HOCHTIEF Group, the reporting standards elected by the Group, and the targets set by the Group (the HOCHTIEF Sustainability Plan 2025). Sustainability reporting is based on the underlying ESG reporting process in the HOCHTIEF Group. Coordinated by the Sustainability corporate department, ESG reporting is prepared Group-wide using a web-based software tool that collects, aggregates, and analyzes all relevant ESG data and information. This process is supplemented by other topic-specific and operational data collection and reporting systems. The sustainability and ESG officers of HOCHTIEF Aktiengesellschaft specify the required ESG data in consultation with management at the HOCHTIEF Group's operational units, determine the reporting frequency, and monitor and control the completeness, consistency, and plausibility of the ESG data and information reported. Responsibility for ensuring the correctness and verifiability of the data reported lies with those who collect it at operational level. This ensures that top-level sustainability/ESG reporting closely dovetails with operational practices and activities. Consolidated ESG data and information is regularly presented to the Executive Board in the Sustainability Committee and published in the Sustainability Report.

Various measures are taken to ensure completeness and plausibility in ESG data collection:

- Uniform coordination and implementation of ESG data reporting from Group down to operational level
- Integrated reporting using central ESG software
- Technical and factual checking by staff of topic-specific corporate departments and the management of operational units
- System-based plausibility checking. The Group companies are required to explain or document any flagged errors or tolerance limits exceeded
- Visual dashboard analyses/report analyses showing the development of ESG performance
- Regular status reports to the Executive Board and Supervisory Board
- Auditor controls in the annual financial statements

HOCHTIEF's established risk management system embraces all layers of the organization and defines directives, responsibilities, processes, and instruments. Information pursuant to GOV-5 on the internal control systems is provided in the Opportunities and Risks Report.

Our Group-wide risk management system is made up of various individual components. The overarching framework is provided by directives that are continuously reviewed and adapted as necessary with regard to changing legal requirements. Group-wide standards on topics such as occupational safety and health, environmental and social standards, rules of conduct, and compliance also contribute to minimizing risk.

Finally, these Group-wide arrangements are supplemented by individual systems, processes, and organizational instructions for the detailed identification, assessment, and management of risks and opportunities within our businesses and operational units.

In a multi-stage process, the operating and holding companies collate their financial and non-financial risks and opportunities and assess them together with business managements and controlling departments. The relevant risks are then reported to Corporate Controlling, indicating the potential impact on earnings and liquidity, the risk category, the possible time horizon, the likelihood of occurrence, and the at-risk amount. The resulting risk situation is incorporated into a final risk report to the Executive Board. This also includes a regular risk-bearing capacity analysis. Regular reports on the Group's current risk situation are likewise submitted to the Supervisory Board's Audit/Sustainability Committee. In the reporting year, risks at Group level were additionally identified, assessed, and prioritized according to their potential financial impact in line with the risk management process as part of the double materiality assessment (DMA). These notably include risks related to climate-related challenges, changing regulatory requirements, and governance topics.

Strategy

SBM-1

Strategy, business model, and value chain

HOCHTIEF's sustainability strategy forms an integral part of the Group strategy, with which we generate value for all stakeholders and secure our long-term success. We define sustainability as a systematic approach to harmonizing economic, environmental, and social responsibility across all our business activities with the aim of securing the long-term viability of the company. This is why sustainability is one of our strategic principles. To this end, we apply a 360-degree focus, taking in all of our business segments and operating activities, and hence also our clients.

Information on HOCHTIEF's products, services, and markets is provided in the Group structure and business activities section and the Markets and operating environment section. The "Markets and operating environment" section describes the market outlook with regard to sales growth in our material businesses. The "Group structure and business activities" section also covers material inputs, notably with details on the procurement of materials and subcontractor services. Output is not presented separately as it is not considered a separate parameter in HOCHTIEF's business model. Instead, our clients commission specific construction works and services, the purpose of which and its assessment is their own responsibility. Information on the number of employees and their breakdown by geographical areas is provided in the Own workforce section. In view of our services and business activities, various additional matters also need to be considered in relation to the sustainability strategy:

As part of our project-based business model, we offer a wide range of services that are flexibly and individually tailored to the requirements of each project as well as to our clients' needs and wishes. Our clients are able to play an active role in shaping project specifications and incorporating specific requirements. In this connection, we encourage them to implement sustainable and innovative solutions that exceed legal requirements and make a positive contribution to sustainability. This includes selecting resource-efficient materials, project-specific deployment of advanced construction techniques, and incorporating innovative technologies. Such sustainable solutions and contracting models, however, gain varying degrees of acceptance. This can significantly constrain the successful implementation of measures to offset potential negative impacts or advance positive impacts on sustainability. A diverse portfolio, from relatively small-scale specialty projects to large infrastructure projects, compounds the challenges involved in addressing sustainability matters in a uniform manner. Our project-based business approach and, in some cases, limited influence on clients' decision making also mean that we do not have full control over the long-term impacts of specific projects.

In the same context, we similarly have varying degrees of operational control over the projects we deliver. This degree of operational control depends on the conditions relating to the contractually agreed works and services. Whether HOCHTIEF is engaged for a build-only contract, a design-and-build contract, or a full package including operation and maintenance not only affects our role in implementing sustainability features, but also determines the scope and duration of our responsibility for a project. These differences directly impact our ability to integrate sustainable practices as well as to estimate and assess long-term effects such as changes in OpEx and CapEx.

In 2025, the Group made good methodological progress in assessing the financial impact of its decarbonization plan by developing a harmonized framework for estimating abatement costs (€/tCO_2e) across its key decarbonization measures. This methodology establishes a structured, transparent, and replicable approach to quantifying the potential additional costs of emission reductions compared to a business-as-usual basis. It distinguishes between CapEx and OpEx, accounts for discounting over the lifetime of the actions, and ensures consistency between cost and emissions system boundaries. This framework was developed to support future strategic decisions, investment prioritization, and internal governance of the transition plan, while strengthening the robustness and comparability of external disclosures.

Building on this methodological development, HOCHTIEF is currently working on applying it to a portfolio of existing decarbonization initiatives covering Scope 1, Scope 2, and selected Scope 3 actions. The assessment covers multiple time horizons and cost scenarios, reflects geographic and business-specific conditions, and integrates structured expert judgments from relevant Group companies to capture operational, technical, financial, and commercial realities. In addition, the analysis explicitly considers the financing of the potential additional costs of emission reductions compared to a business-as-usual basis, including the possible transferability of costs to customers, which enables a clearer understanding of the net expense for HOCHTIEF companies. This work represents an important step toward integrating cost-efficiency considerations into the implementation and monitoring of the Group's decarbonization strategy.

A presentation of our sustainability-related strategic goals in relation to our products and services, clients, and regions is provided in the Goals and strategies section.

The HOCHTIEF Sustainability Plan 2025 embeds sustainability matters in our corporate strategy and establishes long-term targets for the environmental, social, governance (ESG) and innovation, and digital transformation aspects that HOCHTIEF is committed to systematically implementing. Pursuant to the ESRS, we ensure that the targets under our Sustainability Plan and the related actions are based on internationally recognized standards, and we report transparently on our progress. The targets were set without environmental thresholds and do not refer to any company-specific breakdown. Recognized scientific findings were used and relevant national, European, and international targets were taken into account. Among other things, the targets support the Sustainable Development Goals (SDGs) and thus contribute to the overarching context of sustainable development. By aligning with the ESRS topics, both aspects pursue the same overarching goal of promoting sustainable practices and transparent reporting on progress. The further development of new sustainability targets is currently in progress with a view to assessing their implementation in 2026.

In order to meet the requirements and expectations of all relevant stakeholder groups, the HOCHTIEF Sustainability Plan 2025 was developed in 2021 in close collaboration with internal experts and relevant stakeholders. It entered into force in 2022 and has been an integral part of HOCHTIEF’s strategy ever since. This reflects our strategic target of making a positive contribution to social and environmental sustainability.

A description of the HOCHTIEF business model is provided in the Group structure and business activities section. Our activities in the value chain focus on our employees (own workers and value chain workers) as well as on our subcontractors and suppliers. We are in constant dialogue with these groups and with other stakeholders, such as clients and investors. To achieve the required diversity and in-depth level of feedback from these stakeholders, we conduct this dialogue on a thematic and decentralized basis. In an ongoing exchange, the needs of a wide variety of stakeholder groups are identified and taken into account both operationally and strategically over the long term. This feedback is a key element in advancing our comprehensive sustainability strategy and target attainment.

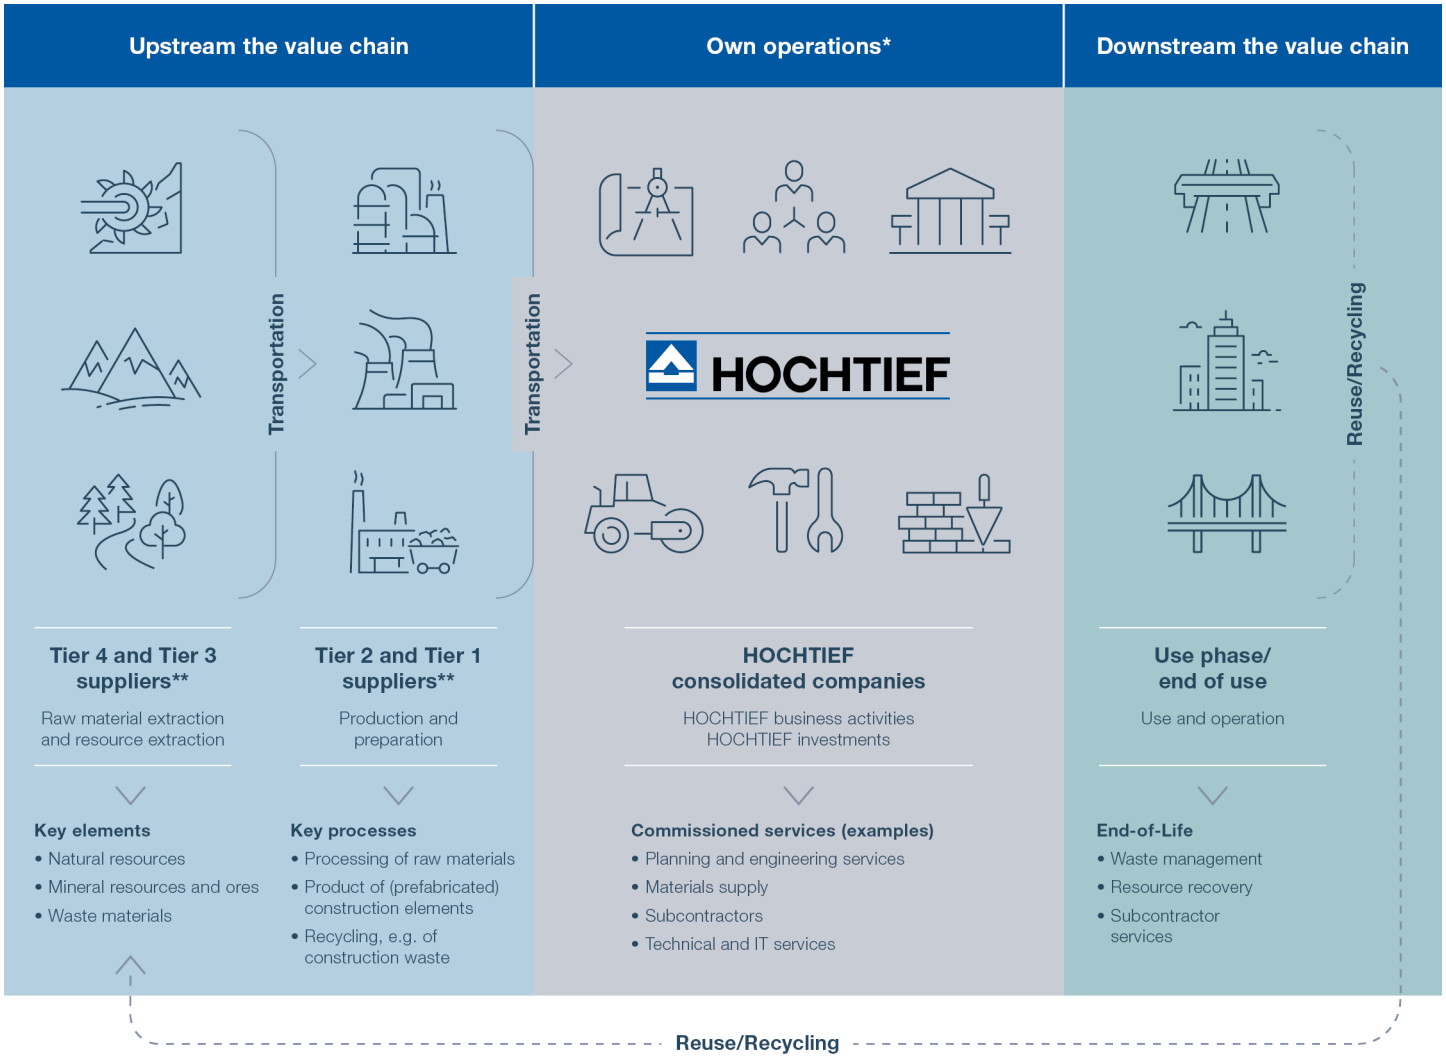
Management of coal, gas, and oil activities

As a global provider of infrastructure solutions, we are in the midst of a major transformation in our business together with clients in the mining industry that benefits the global transition to a more sustainable future.
In fiscal 2025, the share of revenue in the HOCHTIEF Group attributable specifically to power plant coal is 2.3%.

Critical minerals such as lithium, copper, and nickel are essential for renewable energy and electric mobility technologies. By stepping up our critical minerals services, we are helping to secure the basic resources for these growth technologies. In this way, we are not only advancing the transition to clean energy, but also paving the way for a sustainable mobility transition.

The HOCHTIEF value chain (overview)

The main elements of the HOCHTIEF value chain are presented in the chart below.



* HOCHTIEF projects and office locations plus consolidated company locations
** Structure of products and services dependent on project and type of trade

The main elements of the value chain are:

The upstream value chain
Upstream activities encompass processes related to the extraction of resources such as ores—including mining and the transportation of resources to processing plants—as well as the manufacture of products and materials.

Own activities
The HOCHTIEF business model and our business activities are described in the Group structure and business activities section. Material positive and negative impacts can result both from our own activities and from business relationships along the value chain. HOCHTIEF analyzes and assesses these impacts on an ongoing basis in order to minimize risks, exploit opportunities, and ensure responsible business conduct.

The downstream value chain
The downstream value chain comprises the operation and utilization of buildings and infrastructure by clients and users, plus the end-of-life treatment of built structures and materials.

It also includes the regular maintenance work necessary to keep buildings and infrastructure safe and operational. This can include the incorporation of new technologies, the expansion of infrastructure capacity, and enhanced resilience.

Our business activities depend on external factors in both the upstream and the downstream value chain. These include the availability of resources, regulatory requirements, technological advances, and the needs and expectations of our clients. HOCHTIEF takes an integrative and forward-looking approach to proactively address these factors. This enables a flexible response to changes, ongoing development of sustainable construction practices, and the generation of long-term economic and social added value.

Our main resource inflows comprise construction materials obtained from natural sources or by recycling used material. In particular, these include concrete, steel, glass, and to an increasing extent the use of recycled and alternative materials in order to minimize dependence on primary resources and promote sustainable materials management.

A significant resource outflow from our activities consists of buildings and infrastructure that not only meet economic and social purposes, but also provide sustainable solutions. In addition to the construction of new structures, our business activities include operation, maintenance, and refurbishment, which maximize the lifespan of infrastructure. At the end of the project life cycle, materials are reused or recycled wherever possible to promote the circular economy and minimize environmental impacts.

SBM-2

Interests and views of stakeholders

We are in constant dialogue with a wide range of stakeholder groups and constructively address their various demands to take these into account in our work. Our aim here is to track and give strategic consideration to major requirements and expectations in our processes. This is why we regularly engage with stakeholders and invite them to contribute actively in various ways.

Material stakeholders	Interest areas (examples)	Engagement channels (examples)
Employees	Working conditions and the HOCHTIEF corporate culture	• Internal communication • Personal communication • Continuing education and development programs • Employee surveys • Regulations, directives, Code of Conduct
Clients	Efficiency, quality, and sustainability of individual project planning and execution	• Project communication • Trade shows
Workers in the value chain *	HOCHTIEF's procurement requirements, policies, and standards (e.g. on occupational safety)	• Regular information • Qualification and assessment processes
Users	Long-term use of built structures, ideally with improvements in quality of life	• Transparent information and communication
Shareholders	HOCHTIEF's economic and strategic development	• Annual General Meeting • Website
Analysts; investors	HOCHTIEF's economic and strategic development	• Roadshows • Website • Investor conferences
Communities	Short- and/or long-term impacts of construction projects on the environment, transportation, economy, and society	• Transparent information and communication • Local partnerships • Consultation processes • Volunteering, donations, and sponsorship
Future employees	Apprenticeship and job vacancies; recruitment processes and programs	• Recruitment, training, and skills development programs
Governments and public administration; regulatory and supervisory bodies	Implementation and compliance with laws and standards	• HOCHTIEF compliance processes

* Suppliers and subcontractors

Material stakeholders	Interest areas (examples)	Engagement channels (examples)
Universities; research and development	Development of professional training; development of new technologies and practices	• Partnerships
National, regional, and local industry and sectoral associations; strategic partners	Shared interests and industry advocacy	• Involvement in associations and bodies
NGOs	Environmental, economic, and social impact of projects	• Partnerships • Consultation processes
Media	Information of relevance for reporting	• Transparent information and communication
HOCHTIEF Executive Board	Business performance and strategy, reputation management, and compliance with regulatory requirements	• Sustainability Committee • ESG Sustainability Core Team
Trade unions/ works councils	Representation of employee interests	• Transparent information and communication • Social partnerships

In line with the legislation on due diligence, we incorporated the perspectives and needs of our stakeholders into our sustainability strategy in the reporting year with the aid of a stakeholder representation model. This represented and took into account the perspectives of stakeholders in identifying and assessing the actual and potential impacts, risks, and opportunities of our business activities along the value chain. Engaging with and giving due consideration to the interests of our stakeholders enabled us to accurately incorporate the relevant needs and perspectives into our business and sustainability strategy as a result of involving them in business decision-making processes. This enabled us not only to rigorously identify and assess the actual and potential impacts, risks, and opportunities along the entire value chain, but also to ensure that we meet the requirements of the ESRS and our due diligence obligations.

The goal is transparent identification and assessment of impacts, risks, and opportunities, which can be managed accordingly by measures established in accordance with the due diligence legislation. In addition, we also plan to include the perspectives and interests of our stakeholders regularly in the double materiality assessment. This ensures that material impacts, risks, and opportunities inform our strategy and decision-making. It is also expected to result in a further strengthening of relationships with our stakeholders and to their interests being taken into account even more systematically into our day-to-day business.

The administrative, management, and supervisory bodies are informed about the views and interests of stakeholders affected with regard to sustainability topics as part of the regular provision of sustainability information by the Chief Sustainability Officer.

SBM-3

Material impacts, risks, and opportunities and their interaction with strategy and business model

Our double materiality assessment identified material impacts, risks, and opportunities (IROs) at Group level and across our entire business activities. Some of the IROs identified cover all stages of the value chain, from upstream procurement of construction materials to the company's own operations and downstream activities. This means that all identified material IROs are considered systemically, i.e., in terms of relationships, interactions, and the entire structure of a system. The results of the previous year's double materiality assessment were fully taken into account and integrated.

The material IROs confirm and reinforce HOCHTIEF's strategic priorities. Our strategy is geared to promoting sustainable construction and infrastructure projects wherever possible, integrating high environmental and social standards ever more closely into our daily work, and developing innovative solutions to construction challenges. The results of the materiality assessment underscore the urgency and relevance of these issues to our business model, value chain, and decision-making processes and have prompted us to redouble our existing efforts—for example, by integrating ESG criteria more closely into our procurement strategies.

Furthermore, by regularly adapting our strategy to the material IROs, we are able to operate successfully in an increasingly sustainability-oriented market environment. Particularly given the growing importance of climate-friendly construction practices, resource-efficient technologies, and digital innovations, we will work systematically to maximize these opportunities and proactively address potential sustainability risks such as impacts of climate change.

Our strategy is to further strengthen HOCHTIEF's position in its core markets and activities as well as to pursue growth opportunities in advanced technology, the energy transition, and sustainable infrastructure while simultaneously improving cash-backed profitability and applying rigorous risk management. Our businesses are flexible, allowing Management to quickly adapt to varying market conditions. This demonstrates the resilience of our strategy, as the flexibility of our businesses enables them to respond rapidly to changes. The processes and measures implemented with regard to sustainability topics in the Group companies and businesses are based on the strategic focus areas and adequately address the impacts, risks, and opportunities identified in the materiality assessment. The assessment was performed with the involvement of the functional departments. Different time horizons for materialization were thus assigned to each identified impact, opportunity, or risk, and criteria applied such as severity, scope, irremediability, and likelihood of occurrence. On this basis, we determined the actions presented in the sustainability statement.

Climate scenario analysis

Climate scenario analysis is an integral part of the current and future appraisal of our business activities. HOCHTIEF has conducted a comprehensive climate scenario analysis to identify and manage the potential physical and transition risks associated with climate change. The aim of this analysis is to identify and assess potential climate-related risks and opportunities along the entire value chain and to take proactive management action. It is based on international standards such as ISO 14091 and existing climate-related documents, such as the HOCHTIEF Group Report of the Task Force on Climate-related Financial Disclosures (TCFD), and takes the corresponding risks into account. The scenario analysis focuses on HOCHTIEF's direct operating activities (such as construction and services projects as well as concessions), while also taking into account upstream processes (including supply chains and materials procurement) and downstream processes (such as use and operation of infrastructure constructed by HOCHTIEF). While risks are analyzed with respect to the geographic distribution of our projects, this presents a particular challenge in that the specific location of future projects is frequently unknown.

Based on internationally recognized climate scenarios, the climate scenario analysis includes the main drivers associated with those scenarios. For physical risks, HOCHTIEF uses the SSP2-RCP4.5 and SSP5-RCP8.5 scenarios from the reports of the Intergovernmental Panel on Climate Change (IPCC). These scenarios simulate various emission pathways and their potential impacts on climate parameters such as temperature, precipitation, and extreme weather events. All acute and chronic drivers of climate change listed in the EU taxonomy were taken into account in the analysis of physical risks. For transition risks, use is made of the International Energy Agency (IEA) STEPS (Stated Policies Scenario) and NZE (Net Zero Emissions by 2050) scenarios. STEPS reflects current policies while the NZE scenario assumes a zero-carbon economy by 2050.

The analysis is performed over several time horizons, which differ according to the scenario and the underlying methodology. For physical risks, the time periods analyzed are short-term (less than five years), medium-term (five to 15 years), and long-term (more than 15 years and up to 2050). Transition risks are assessed for the periods to 2035 and from 2036 to 2050. The different time horizons are necessary because, in many cases, transitional risks such as regulatory changes or technological innovations arise sooner than physical risks, which are more likely to materialize farther into the future as a result of long-term climate developments. Using the selected scenarios enables HOCHTIEF to take an integrated view of plausible risks and uncertainties.

To account for the great diversity in our project portfolio, our climate risk analysis methodology is structured around project types or what are known as proxies. For each project type—for example, buildings, rail infrastructure, or highways—we identify the most important assets and services exposed to impacts of climate change. These show varying degrees of sensitivity to the various drivers of climate change, which include acute and chronic changes in precipitation and temperature, as well as other drivers listed in the Annex to the EU Taxonomy. Integrating geographical information and project types into this analysis allows us to systematically assess the drivers of climate change across different time horizons and scenarios and thus to determine the exposure and vulnerability of our projects to the risks concerned. This enables a comprehensive, project-specific risk analysis. Our approach is dynamic and subject to ongoing development by adding new project types or adapting the parameters for sensitivity and exposure in line with the latest insights from scientific research, industry, and our own experience. In addition to the climate scenario analysis, a Group-wide resilience analysis was carried out in order to assess the company's resilience to the identified climate risks. This analysis takes into account the likelihood of occurrence and (financial) severity of the risks in relation to the company's ability to avoid or manage them. As the resilience analysis and the climate scenario analysis are closely related in terms of methodology, both processes were conceptualized on the basis of the TCFD and relate to the same time horizons, climate scenarios, and affected parts of the company.

As a combined outcome of the two processes, no significant residual physical risks relating to climate change were identified for our business activities for any of the periods or scenarios analyzed. The main reasons for this are as follows:

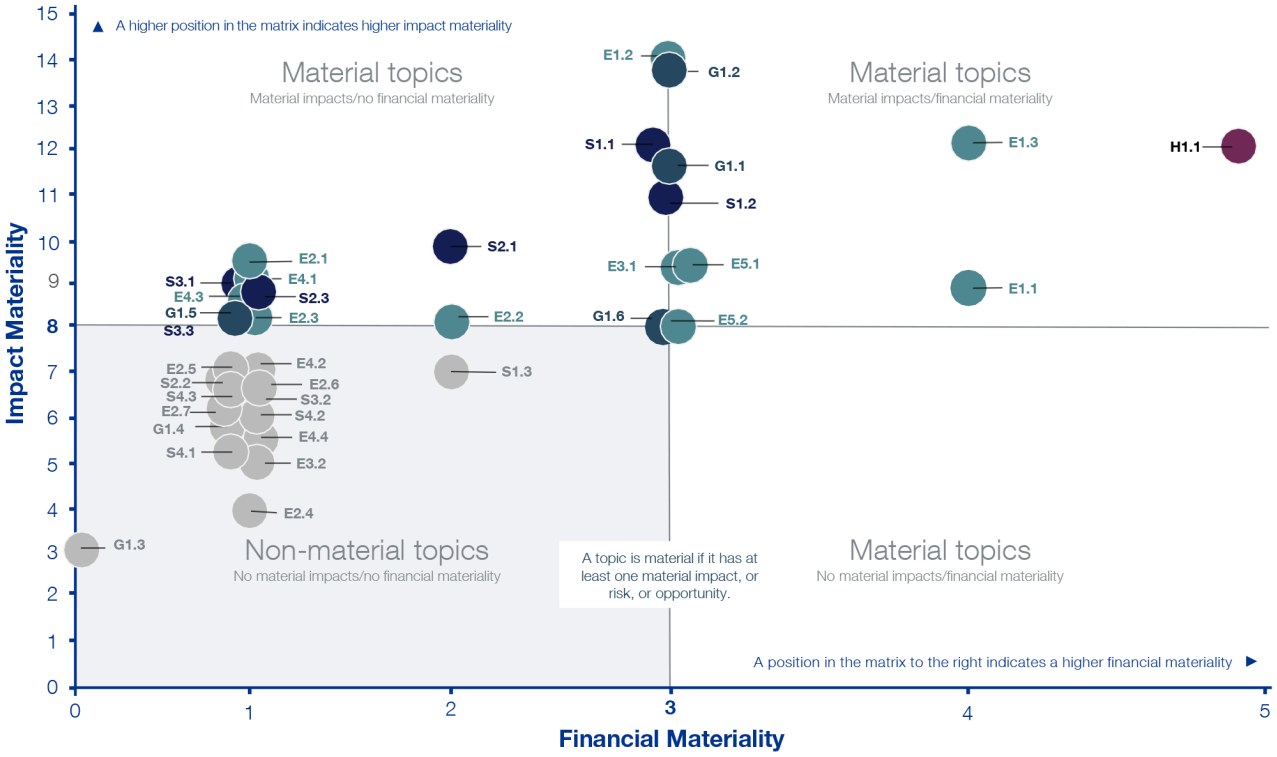
- Short project durations: With an average duration of three to five years, most projects are not subject to long-term risks, and suitable adaptation measures are identified and implemented in all cases on a project-specific basis for short and medium-term risks. The short durations also allow HOCHTIEF to continuously and appropriately fine-tune the (risk) mitigation measures in the event of heightened long-term risks.
- Geographically very limited exposure to most physical risks: Due to the large number and geographical diversity of our projects, any local physical risk will generally only affect an individual project and thus not be material in the Group-wide context.
- Thorough weighing of potential risks from the outset in the quotation and contract negotiation phase.

In addition, HOCHTIEF has a comprehensive internal catalog of (risk) mitigation measures that enables the operational units to implement effective measures to avoid physical risks.

All risks identified as material fall into the category of transition risks, as they relate to market developments or regulatory changes that may result from the transition to a carbon neutral economy. We consider ourselves well prepared and expect the overall financial impact to be positive, particularly given our business strategy and the many opportunities: HOCHTIEF has significantly developed its expertise in the areas of low-carbon solutions, resilient infrastructure, and new business segments, and has further strengthened its market position in these areas (see Climate change adaptation (E1) and Innovation (H1)). As a reliable and established provider, the expected growth in demand for related projects for societal transformation processes (such as the energy and mobility transition) as climate change progresses means that we stand to benefit with potential positive financial effects.

HOCHTIEF's project-based business model also lends it a high degree of flexibility to quickly adapt project operations to market developments or legislative changes. In light of these developments, we expect that the transition risks will not have a significant negative financial impact, and that opportunities with a positive financial impact for HOCHTIEF will continue to outweigh the risks. In addition, as the opportunities and risks are fully incorporated into HOCHTIEF's risk management system, the resilience of HOCHTIEF and its projects is continuously monitored and ensured. In the social dimension, we can further enhance our business models in the future by continuing to focus on and develop the material IROs we have defined, while also prioritizing the interests of our employees. This includes a safe and healthy working environment, equal opportunities, and professional development for our employees. We adapt the professional skills of our employees to the changing needs of our increasingly sustainability-oriented Group by offering specific training aligned with our business activities, such as environmental training, as well as further training for technical professions.

Results of the double materiality assessment at HOCHTIEF: Material topics (2025)



Environmental (E)

E1	**Climate change**
E1.1	Climate change adaptation
E1.2	Climate change mitigation
E1.3	Energy
E2	**Pollution**
E2.1	Pollution of air
E2.2	Pollution of water
E2.3	Pollution of soil
E2.4	Pollution of living organisms and food resources
E2.5	Substances of concern
E2.6	Substances of very high concern
E2.7	Microplastics
E3	**Water and marine resources**
E3.1	Water
E3.2	Marine resources
E4	**Biodiversity and ecosystems**
E4.1	Direct impact drivers of biodiversity loss
E4.2	Impacts on the state of species
E4.3	Impacts on the extent and condition of ecosystems
E4.4	Impacts and dependencies on ecosystem services
E5	**Circular economy**
E5.1	Resources inflows and resource outflows, including resource use
E5.2	Waste

Social (S)

S1	**Own workforce**
S1.1	Working conditions
S1.2	Equal treatment and opportunities for all
S1.3	Other work-related rights
S2	**Workers in the value chain**
S2.1	Working conditions
S2.2	Equal treatment and opportunities for all
S2.3	Other work-related rights
S3	**Affected communities**
S3.1	Communities' economic, social and cultural rights
S3.2	Communities' civil and political rights
S3.3	Rights of indigenous people
S4	**Consumers and end-users**
S4.1	Information-related impacts for consumers and/or end-users
S4.2	Personal safety of consumers and/or end-users
S4.3	Social inclusion of consumers and/or end-users

Governance (G)

G1	**Business conduct**
G1.1	Corporate culture
G1.2	Protection of whistleblowers
G1.3	Animal welfare
G1.4	Political engagement and lobbying activities
G1.5	Management of relationships with suppliers including payment practices
G1.6	Corruption and bribery

Overview of the material impacts, risks and opportunities according to the double materiality analysis at HOCHTIEF (2025)

					Positioning in the value chain			Time horizon			Impacts	
ESRS	Number	Reference number in the report	IRO type	IRO description	Upstream	Own activities	Downstream	Short-term	Medium-term	Long-term	Actual	Potential
Environment												
ESRS E1 Climate change												
E1.1 Climate change adaptation												
E1	E1.1	E1-PI1	Positive impact	Increase in territorial climate resilience through infrastructure that enhances adaptation capacity to extreme climate events.	•	•	•				•	
E1	E1.1	E1-R1	Risk	Decrease in revenue due to the decline in contract coal mining services activities, caused by the significant decrease in demand for fossil fuels.		•			•	•		
E1	E1.1	E1-R2	Risk	Increased costs and delays due to extreme weather events during the construction phase, impacting insurance, the supply chain, and delivery schedules.	•	•	•	•	•	•		
E1	E1.1	E1-O1	Opportunity	Financial benefits due to market expansion driven by the increased demand for resilient infrastructure and climate change adaptation projects.	•	•	•	•	•	•		
E1	E1.1	E1-O2	Opportunity	Financial benefits generated by the growing demand for metals needed for the energy transition.		•		•	•	•		
E1.2 Climate change mitigation												
E1	E1.2	E1-PI2	Positive impact	Generation of climate and social value through the development of sustainable infrastructure that promotes clean mobility and the energy transition.	•	•	•				•	
E1	E1.2	E1-NI1	Negative impact	Significant amount of GHG emissions released into the atmosphere along the value chain due to the Group's business model.	•	•	•				•	
E1	E1.2	E1-R3	Risk	Decrease in revenue resulting from lower demand for projects due to increased costs from stricter regulations on fossil fuels and greenhouse gases.	•	•	•	•	•			
E1	E1.2	E1-O3	Opportunity	Revenue growth driven by growing demand for sustainable projects and the exploration of new business fields focused on climate change mitigation.		•	•	•	•	•		
E1.3 Energy												
E1	E1.3	E1-PI3	Positive impact	Increase in energy availability through the generation of renewable energy at plants and the injection of surplus self-produced energy into the grid.		•					•	
E1	E1.3	E1-NI2	Negative impact	High energy consumption from non-renewable sources resulting from business activities.		•					•	
E1	E1.3	E1-O4	Opportunity	Greater demand for projects as a consequence of the rise in high-tech infrastructure for energy transition and mobility.	•	•	•	•	•	•		

					Positioning in the value chain			Time horizon			Impacts	
ESRS	Number	Reference number in the report	IRO type	IRO description	Upstream	Own activities	Downstream	Short-term	Medium-term	Long-term	Actual	Potential
ESRS E2 Pollution												
E2.1 Pollution of air												
E2	E2.1	E2-NI1	Negative impact	Decrease of air quality and emissions of air pollutants caused by the burning of fuels.	•	•	•				•	
E2.2 Pollution of water												
E2	E2.2	E2-NI2	Negative impact	Unintentional pollution of water bodies caused by accidental fuel spills in operational activities.		•					•	
E2.3 Pollution of soil												
E2	E2.3	E2-NI3	Negative impact	Unintentional soil pollution caused by accidental fuel spills in operational activities.		•		•	•	•		•
ESRS E3 Water and marine resources												
E3.1 Water												
E3	E3.1	E3-NI1	Negative impact	High water consumption, withdrawal, and discharge in own operations and upstream the value chain alter local water systems and affect their scarcity, especially in areas of water stress.	•	•					•	
E3	E3.1	E3-PI1	Positive impact	Improvement in the availability and quality of water in the local environment thanks to the development of water management projects such as distribution networks, canals or water treatment plants.	•	•	•				•	
E3	E3.3	E3-R1	Risk	Construction delays caused by interruptions in water access due to the effects of climate change and other actors' withdrawals.		•				•		
ESRS E4 Biodiversity amd ecosystems												
E4.1 Direct impact drivers of biodiversity loss												
Land-use change, fresh water-use change and sea-use change												
E4	E4.1	E4-NI1	Negative impact	Alteration of natural habitats and associated reduction of local biodiversity due to operational activities and respective land transformations.		•					•	
Direct exploitation												
E4	E4.1	E4-NI2	Negative impact	Biodiversity loss from the procurement of virgin building materials, particularly wood, that might not consistently meet sustainability standards.	•	•	•				•	
E4.3 Impacts on the extent and condition of ecosystems												
Land degradation, desertification, and soil sealing												
E4	E4.3	E4-NI3	Negative impact	Land degradation caused by Group operational activities, including soil sealing, compromises the land's ecological functions and its role in the balance of ecosystems.		•					•	

ESRS	Number	Reference number in the report	IRO type	IRO description	Positioning in the value chain: Upstream	Own activities	Downstream	Time horizon: Short-term	Medium-term	Long-term	Impacts: Actual	Potential
ESRS E5 Circular economy												
E5.1 Resources inflows and outflows, including resource use												
E5	E5.1	E5-NI1	Negative impact	An inefficient use of resources and resource-intensive operations as well as the use of non-renewable and non-recyclable materials have a negative impact on the circular economy and resource availability.	•	•	•				•	
E5	E5.1	E5-PI1	Positive impact	Promoting sustainable construction practices and the use of durable materials, contributing to long-term sustainability as well as longer project lifetime.	•	•	•				•	
E5	E5.1	E5-O1	Opportunity	Increase in financial profitability from the efficient use of materials and resources, as well as the adoption of circular practices.	•	•	•	•	•	•		
E5.2 Waste												
E5	E5.2	E5-NI2	Negative impact	Due to the international scope of operations, the company produces great amounts of waste.	•	•	•				•	
E5	E5.2	E5-O2	Opportunity	Cost reductions and increased project profitability by avoiding waste generation, decreasing the need for new (virgin) materials, disposal costs, and potentially leveraging income from the sale of separated waste.	•	•	•	•	•	•		
SOCIAL												
ESRS S1 Own workforce												
S1.1												
Adequate wages												
S1	S1.1	S1-PI1	Positive impact	Adequate wages policies for own employees.		•					•	
Collective bargaining, including rate of workers covered by collective agreements												
S1	S1.1	S1-PI2	Positive impact	High proportion of workers covered by collective agreements.		•					•	
Work-life balance												
S1	S1.1	S1-PI3	Positive impact	Offer flexible work models for work-life balance.		•					•	
S1	S1.1	S1-NI1	Negative impact	Difficulty in balancing work and personal life due to the need of residence at construction sites.		•					•	
Health and safety												
S1	S1.1	S1-NI2	Negative impact	Detriment to employees' mental health caused by high levels of stress, excessive workloads, and lack of digital disconnection measures.		•					•	
S1	S1.1	S1-NI3	Negative impact	Effect on occupational safety due to the likelihood of accidents in construction projects.		•					•	
S1	S1.1	S1-R1	Risk	Legal costs and reputational damage resulting from health and safety incidents involving own workers.		•		•	•	•		

ESRS	Number	Reference number in the report	IRO type	IRO description	Positioning in the value chain: Upstream	Positioning in the value chain: Own activities	Positioning in the value chain: Downstream	Time horizon: Short-term	Time horizon: Medium-term	Time horizon: Long-term	Impacts: Actual	Impacts: Potential
S1.2 Equal treatment and opportunities for all												
Training and skills development												
S1	S1.2	S1-PI4	Positive impact	Increase in the level of employee knowledge through training programs, professional academies, and annual professional development meetings (including ESG aspects).		•					•	
Measures against violence and harassment in the workplace												
S1	S1.2	S1-NI4	Negative impact	Vulnerability in the working environment due to insufficient measures against violence and harassment.		•		•	•			•
S1	S1.2	S1-O1	Opportunity	Greater attractiveness as an employer by implementing effective measures against inequality and harassment, facilitating the attraction of highly qualified talent.		•		•	•			
ESRS S2 Workers in the value chain												
S2.1 Working conditions												
Adequate wages												
S2	S2.1	S2-PI1	Positive impact	Adequate salary policies including value chain workers.		•					•	
Health and safety												
S1	S2.1	S2-NI1	Negative impact	Danger in occupational safety due to potential accidents in construction projects.		•		•	•	•		•
S2.3 Other work-related rights												
S2	S2.1	S2-NI2	Negative impact	Violation of human rights due to the acquisition of materials from high-risk countries and suppliers.	•			•	•			•
ESRS S3 Affected communities												
S3.1 Communities' economic, social and cultural rights												
Socioeconomic conditions of local communitites												
S3	S3.1	S3-PI1	Positive impact	Business activities support communities' quality of life and sustainable development.		•					•	
S3	S3.1	S3-PI2	Positive impact	Donations and corporate volunteering as contribution to the sustainable development of communities.		•					•	
Security-related impacts												
S3	S3.1	S3-NI1	Negative impact	Community safety concerns due to construction in urban areas.		•					•	
S3.3 Rights of Indigenous people												
Free, prior and informed consent												
S3	S3.3	S3-PI3	Positive impact	Transparency with local communities and Indigenous peoples by offering clear and accessible information about activities.		•					•	
S3	S3.3	S3-NI2	Negative impact	Inadequate protection of the rights of Indigenous peoples due to the lack of participation in and information about projects.		•		•	•			•

					Positioning in the value chain			Time horizon			Impacts	
ESRS	Number	Reference number in the report	IRO type	IRO description	Upstream	Own activities	Downstream	Short-term	Medium-term	Long-term	Actual	Potential
GOVERNANCE												
ESRS G1 Business conduct												
G1.1 Corporate culture												
G1	G1.1	G1-NI1	Negative impact	Deficit in corporate culture due to the lack of an adequate culture of business conduct.	•	•	•	•	•	•		•
G1	G1.1	G1-PI1	Positive impact	Economic and social development through the payment of taxes, job creation, and collaboration with tax authorities.	•	•	•				•	
G1	G1.1	G1-NI2	Negative impact	Employees suffer from an unopen and burdening culture, increasing stress levels and reducing identification with the company.	•	•	•				•	
G1	G1.1	G1-NI3	Negative impact	Inequality between countries caused by paying taxes in locations different from where the actual economic activity takes place.	•	•	•	•	•	•		•
G1	G1.1	G1-PI2	Positive impact	Greater capacity to take advantage of opportunities in ESG dimensions as a consequence of an active culture of promoting ethical and sustainability values which create a more collaborative and creative work environment, which may lead to innovation and development of new products.		•					•	
G1	G1.1	G1-PI3	Positive impact	Creating long-term economic value for shareholders, investors and the local economy through a good compliance system.	•	•	•				•	
G1	G1.1	G1-PI4	Positive impact	Reinforcement of corporate culture by engaging business partners with the values of the Code of Conduct for Business Partners.	•						•	
G1	G1.1	G1-NI4	Negative impact	Unauthorized access to confidential data due to security deficiencies in a company's computer systems.		•		•	•	•		•
G1	G1.1	G1-O1	Opportunity	A strong business code of conduct can foster a more collaborative and creative work environment, which may lead to innovation and development of new products.		•		•	•	•		
G1.2 Protection of whistleblowers												
G1	G1.2	G1-PI5	Positive impact	Promotion of transparency and integrity in the environment through the implementation of anonymous reporting mechanisms accessible to employees and external stakeholders.	•	•	•				•	
G1	G1.2	G1-R1	Risk	Inadequate reporting systems and poor protection of whistleblowers can lead to compliance violations, sanctions up to the point of blacklisting and fines as well as poor reputation.	•	•	•	•	•	•		
G1.5 Management of relationships with suppliers including payment practices												
G1	G1.5	G1-NI5	Negative impact	Payment practices - Long payment periods can result in suppliers not being able to make their own payments to their suppliers or employees.	•		•	•	•	•		•

ESRS	Number	Reference number in the report	IRO type	IRO description	Positioning in the value chain: Upstream	Own activities	Downstream	Time horizon: Short-term	Medium-term	Long-term	Impacts: Actual	Potential
G1.6 Corruption and bribery												
Prevention and detection including training												
G1	G1.6	G1-NI6	Negative impact	Inequality and environmental damage due to ineffective anti-corruption measures that foster poverty and corruption.	•	•	•	•	•	•		•

Changes with regard to material IROs compared to the 2024 reporting year

HOCHTIEF reported a total of 122 material IROs in the 2024 Sustainability Statement. Of these, 56 related to environmental matters, 40 to social matters, 24 to governance matters, and two to the entity-specific matter of digitalization and innovation. A total of 63 material IROs were identified in the 2025 DMA process. Of these, 26 related to environmental matters, 18 to social matters, 15 to governance matters, and four to the entity-specific topic of digitalization and innovation.

IROs that are closely related in subject matter have been consolidated and depicted more precisely. In most cases, the wording has been made more concise without any significant changes to the substance.

Management of impacts, risks, and opportunities

IRO-1

Description of the process to identify and assess material impacts, risks, and opportunities

We once again conducted a double materiality assessment (DMA) in the reporting year in accordance with ESRS requirements. It is based on a systematic assessment of the financial materiality and impact materiality of sustainability matters along our value chain. In a structured process, internal stakeholders were involved, and the interests and views of external stakeholders represented in order to identify and prioritize material sustainability aspects and assess their impact on our business model, the environment, and society. The results of the previous years' double materiality assessment were fully taken into account and integrated. The identified material impacts, risks, and opportunities were systematically reviewed and, where necessary, further developed. Compared to the previous reporting period, there were changes at the level of individual material topics and (sub-)topics across all environmental, social, and governance areas. Individual (sub-)topics were reassessed on the basis of in-depth analyses and improved data. As a result, one topic previously classified as material and selected (sub-)topics were no longer classified as material in the reporting year, as material actual or potential impacts, risks, or opportunities were no longer identified. However, the majority of the topics identified as material in the previous year remained unchanged due to unchanged business activities, value chains, and risk profiles.

The assessment was carried out in several iterations and was based on a top-down approach with bottom-up validation. Both internal and external stakeholder perspectives were taken into account.

- Top-down: HOCHTIEF Aktiengesellschaft performed a double materiality assessment for every ESRS topic, including all business activities within the Group, the entire upstream and downstream value chain, and stakeholder perspectives and interests.
- Bottom-up: Assessments were obtained from the operating companies in order to take explicit account of their specific perspectives and to identify differences, such as differing local stipulations and circumstances. To enable thorough validation of the preliminary findings, the operating companies were provided in advance with a CSRD information package containing comprehensive information about the planned process. The feedback from all operating companies was then analyzed and appraised at the level of the HOCHTIEF Group.

As a first step and in preparation for the materiality assessment, HOCHTIEF's business activities were analyzed in context in order to gain a better understanding of potential impacts along the entire HOCHTIEF value chain. Based on the ESRS requirements as well as internal and external data sources, a list of potentially material, historical, and possible future impacts, risks, and opportunities (IROs) was then compiled. These were identified in collaboration with in-house departments and supplemented with external media analyses as well as established due diligence and risk management processes. The IROs were assessed for the two dimensions of double materiality:

- **Impact materiality:** An ESRS sustainability matter is identified as material if positive and/or negative impacts from our business activities are identified that have a significant impact on people, the environment, or society ("inside-out"). In the context of impact materiality, we also examine our business activities for significant dependencies.

- **Financial materiality:** An ESRS sustainability matter is identified as material if it has or can be expected to have a significant influence on HOCHTIEF's financial position. This is reflected in the presentation of (potential) financial risks and opportunities ("outside-in"). In connection with financial materiality, we also examine our business activities for material dependencies.

Integration of the stakeholder perspective

Communication by HOCHTIEF experts with relevant stakeholder groups and incorporating their views and interests into HOCHTIEF's business and sustainability strategy have constituted an integral practice at HOCHTIEF for many years. HOCHTIEF's decision to use the stakeholder representation approach for the double materiality assessment was the outcome of several past and recent stakeholder dialogue events, online surveys, and direct interaction between employees and relevant stakeholder groups. HOCHTIEF experts from various corporate units and operational businesses—with over a decade of experience in stakeholder engagement and related communications—participated in the materiality assessment. This ensured that the perspectives and interests of relevant internal and external stakeholders were accurately taken into account and incorporated into identifying and assessing impacts, risks, and opportunities along the company's value chain.

As an outcome of the assessment of stakeholder interests in accordance with the ESRS disclosure requirements, numerous stakeholders were identified to an equal extent both as users of our sustainability information and as groups affected by our activities and operations. One linkage here involves the fact that affected groups in particular have a heightened interest in changes in sustainability information, as the changes may have a direct impact on their own situation.

Approval of the double materiality assessment by the Executive Board

The results of the double materiality assessment were presented to the Executive Board at one of its meetings and discussed. This was followed by a final review and ultimately the approval of the results of the double materiality assessment by the Executive Board. The results of the double materiality assessment were also presented to the Audit/Sustainability Committee of the Supervisory Board.

The findings from the double materiality assessment are incorporated into strategic planning and the development of actions to minimize sustainability impacts and risks and systematically leverage opportunities.

By carrying out the double materiality assessment in accordance with ESRS, we ensure that core elements of corporate due diligence are consistently integrated into the corporate strategy. This specifically includes the identification, assessment, and management of potential risks and impacts on the environment and society along the entire value chain. In this way, the findings from the double materiality assessment inform our strategic decision-making processes and support sustainable business conduct.

The double materiality assessment is reviewed and updated annually at HOCHTIEF to ensure that changing market dynamics and regulatory requirements as well as new and heightened stakeholder expectations are continuously incorporated into the sustainability strategy and adequately addressed.

Process to identify, assess, prioritize, and monitor the undertaking's potential and actual impacts (impact materiality)

In the following, we describe how one of the two components of double materiality—impact materiality—has been defined and assessed for impacts and corresponding ESRS topics. For this purpose, actual and potential (positive and negative) impacts of our business activities along the entire value chain as well as dependencies were analyzed and assessed on the basis of materiality parameters such as their scope with regard to the environment and society, their geographical reach, and their impacts in terms of human rights. The impact materiality or severity resulting from these parameters makes it possible to prioritize material impacts by severity.

It should be noted that, both for impacts and for financial risks and opportunities, materiality parameters are assessed without taking into account any preventive measures (prior to occurrence) or any rehabilitation, restoration, or compensation measures (subsequent to occurrence). Accordingly, impacts are fundamentally analyzed, and impacts, risks, and opportunities assessed, on a gross basis.

Actual and potential impacts

Actual impacts relate to events that occur in the present or have occurred (or recurred) within a period of up to 12 months. Potential impacts relate to events that do not occur in the present but could occur over a short-, medium-, or long-term time horizon, in conjunction with their likelihood of occurrence.

Materiality parameters for positive and negative impacts

The following table shows the materiality parameters and thresholds applied to assess positive and negative impacts in the materiality assessment in accordance with ESRS. Each impact was assessed individually against the specified materiality parameters. The overall materiality of each impact was then determined using the calculation methodology shown in the table, together with qualitative parameters in accordance with ESRS (time horizons; value chain location; caused or contributed). This made it possible to systematically prioritize the impacts by materiality.

Materiality parameters for potential impacts				
Materiality parameters for actual impacts				
Scale	**Scope**	**Irremediability**	**Likelihood of occurrence**	**Negative human rights impact**
Severity of environmental and social impact	Geographic reach of impact: How many areas and people affected; boundaries of affected supply chains	Remediability of negative impacts (does not apply to positive impacts)	How likely the impact is to occur (with time horizon in each case)	Impacts classified as having a negative human rights impact under the UN Universal Declaration of Human Rights and the European Union Charter of Fundamental Rights
5: Very high 4: High 3: Medium 2: Low 1: Very low/none	5: Global/total 4: Widespread 3: Medium 2: Concentrated 1: Limited/none	5: Not remediable 4: Long-term 3: Difficult/medium term 2: With effort 1: Easy/short term	4: Very likely (>75%) 3: Likely (50–75%) 2: Rather unlikely (25–50%) 1: Unlikely (<25%)	Potential impacts with an identified negative human rights impact are given a 100% likelihood of occurrence.

Impact materiality calculation methodology		
	Actual impacts	**Potential impacts**
Positive	(Scale + Scope) x 1.5	(Scale + Scope) x 1.5 x Likelihood of Occurrence
Negative	Scale + Scope + Irremediability	(Scale + Scope + Irremediability) x Likelihood of Occurrence
The final materiality level is a score on a scale from 0 to 15. An impact is material if its score is greater than or equal to eight. In accordance with ESRS, impacts identified as having a negative human rights impact are given a 100% likelihood of occurrence.		

Process to identify, assess, prioritize, and monitor financial risks and opportunities (financial materiality)

The second component of double materiality is financial materiality. A sustainability aspect is financially material if it has, or can have, a significant financial impact on the organization. This is the case if there are risks or opportunities in connection with sustainability matters that have, or will have, a material impact on the organization's cash flow, development, performance, position, cost of capital, or access to finance. The magnitude of financial materiality is hence given as a specific (monetary) amount or, in the case of a potential financial impact of a risk or opportunity, a range. Quantitative thresholds are applied for financial materiality. These are based on the amounts used in Group-wide risk reporting. The analysis was done in all cases on a gross basis (before occurrence and prior to any mitigation actions). In addition, when identifying financial risks and opportunities, we considered whether dependencies and impacts could give rise to risks and opportunities, which were then included in the materiality assessment.

Materiality parameters for financial risks and opportunities

The following table shows the materiality parameters and thresholds applied to assess financial risks and opportunities in the materiality assessment in accordance with ESRS. Each identification of an opportunity or risk was assessed individually against the specified materiality parameters. These are based both on existing risk analyses as well as the interests and perspectives of HOCHTIEF stakeholders. The overall materiality of each impact was then determined using the calculation methodology shown in the table, together with qualitative parameters in accordance with ESRS (time horizons and value chain location). This made it possible to systematically prioritize the sustainability risks and opportunities by financial materiality.

Materiality parameters for financial risks and opportunities	
Financial scale	**Likelihood of occurrence**
Magnitude of financial effect on HOCHTIEF	Likelihood of the financial risk or financial opportunity
5: Very high 4: High 3: Medium 2: Low 1: Limited/none	4: Very likely (>75%)| I factor 1 3: Likely (50–75%) I factor 0.85 2: Rather unlikely (25–50%) I factor 0.7 1: Unlikely (<25%)| I factor 0.65 To calculate financial materiality, probability factors are assigned to the likelihood of occurrence, and are used in the calculation instead of the actual percentage values.

Financial materiality calculation methodology	
Financial risks	**Financial opportunities**
Financial Magnitude x Likelihood of Occurrence (factor)	
The final materiality level is a score on a scale from 0 to 5. A financial risk or opportunity is material if its score is greater than or equal to three.	

IRO-2

The central decision-making basis for the sustainability reporting in the reporting year comprises the principles of materiality assessment set out in ESRS 1 Section 3.2. These form the basis for assessing the materiality of each disclosure requirement and each datapoint:

- Double materiality: consideration of the materiality of impacts and financial opportunities and risks
- Integration of stakeholder perspectives: engagement with internal and external stakeholders in decision-making on relevant information

- Holistic value chain analysis: assessment of impacts along the entire supply and value chain
- Analysis of different time horizons: assessment of short-, medium- and long-term impacts, opportunities, and risks

Applying these principles ensured a detailed assessment of the materiality of each datapoint to ensure accurate, transparent, and ESRS-compliant reporting. To ensure the ongoing relevance of the disclosed information, the materiality assessment is reviewed annually and adapted to regulatory developments, changing stakeholder requirements, and market conditions.

MDR-P

Policies adopted to manage material sustainability matters

Sustainability management at HOCHTIEF is based on binding guidelines. All Group guidelines are issued on behalf of the Executive Board, and the respective Group departments are responsible for implementation and compliance in cooperation with the internal audit department. In addition, there are decentralized regulations within the operating companies that specify the application of the Group guidelines and take into account company- and country-specific characteristics. Further details on the documents mentioned can be found in several topic-specific chapters of the sustainability statement.

Directive/ Framework	Content	Responsible unit	Impact on the value chain	Scope of application	Internationally recognized reference works
HOCHTIEF Code of Conduct	Guidelines for the conduct of all employees in their day-to-day business activities to ensure compliance with laws, internal regulations, and ethical business practices. Reviewed regularly.	Corporate Compliance	Entire value chain	Group	
HOCHTIEF Sustainability Plan 2025	Within the pillars of environment, social affairs, and corporate governance, we have defined key topics (“lines of action”) and key performance indicators (KPIs) that guide our daily work at HOCHTIEF. The plan was rolled out across the Group in 2022. The further development of new sustainability targets is currently in progress with a view assessing their implementation in 2026.	Corporate Sustainabiltiy	Entire value chain	Group	
Compliance Management System	Describes measures to prevent violations, particularly in the areas of anti-corruption, antitrust law, money laundering, counterterrorism, economic criminal law in general, and human rights due diligence.	Corporate Compliance	Own activities	Group	IDW PS980 ISO 37301 UN Global Compact
Group directive on Occupational Safety, Health, Environmental and Climate Protection	Regulates responsibilities and requirements for occupational safety and health protection as well as environmental and climate protection.	Corporate HR and Corporate Sustainabiltiy	Own activities	Group	
Group Directive on Human Rights Governance	Regulates Group-wide responsibilities for the protection of human rights and establishes obligations to respect and monitor human rights through due diligence processes.	Corporate Compliance	Own activities	Group	
Group Directive on Anti-Bribery, Anti-Discrimination, Anti-Harassment and Anti-Bullying	Prohibits discrimination and harassment on the basis of age, gender, disability, ethnic origin, religion, ideology, or sexual orientation, among other factors.	Corporate HR	Own activities	Group	
Group Directive on Donations and Sponsoring	Defines key areas for donations and sponsorship, regulates responsibilities and reporting processes.	Corporate Communications	Own activities	Group	
Group Directive Social Engagement	Supplements the “Donations and Sponsorship” policy by defining areas for philanthropic and social engagement at HOCHTIEF and contains definitions and provisions for social engagement.	Corporate HR	Own activities	Group	
Human Rights Statement of Principles	Introduced in 2023, it addresses human rights issues and processes relating to the company’s own employees as part of a voluntary commitment and also focuses on relationships with stakeholders in the supply chain. It is based on respect for internationally recognized human rights. The policy statement was adopted by the Executive Board and is implemented under the responsibility of the respective departments of the Group companies.	Corporate Compliance	Entire value chain	Group	• UN Guiding Principles on Business and Human Rights • OECD Guidelines for Multinational Enterprises • Guidelines for the Fulfillment of Due Diligence for Responsible Business Conduct • ILO Tripartite Declaration of Principles concerning Multinational Enterprises and Social Policy • UN Global Compact
Tax Directive	Regulates the tasks, objectives, rights, and obligations of the Group Accounting and Tax Department as well as the necessary and mandatory involvement of the Department in defined processes.	Corporate Accounting and Tax	Own activities	Group	

Directive/ Framework	Content	Responsible unit	Impact on the value chain	Scope of application	Internationally recognized reference works
Group Directive on Communications	Regulates internal and external communications, contact with politicians and associations, membership in institutions, and use of the HOCHTIEF name and brand.	Corporate Commu-nictaions	Own activities	Group	
IT Group Directive	Regulates IT tasks and organization across the Group.	Corporate IT	Own activities	Group	Based on: ISO 27001
Information Security Policy	Regulates requirements for data security, confidentiality, and availability.	Corporate IT	Own activities	Group	Based on: ISO 27001
Group Code of Conduct for Business Partners	Group policy statement on the HOCHTIEF Code of Conduct for contractors. In addition, the codes of conduct of the Group companies apply, which are tailored to local laws, regulations, and standards/practices.	Procurement Department on behalf of the Executive Board	Upstream	Konzern	• UN Universal Declaration of Human Rights • UN Guiding Principles on Business and Human Rights • OECD Guidelines for Multi-national Enterprises • ILO Conventions • UN Convention on the Rights of the Child • UN Global Compact • UN Sustainable Develop-ment Goals (SDGs)
HOCHTIEF Code of Conduct for Business Partners and Human Rights	Regulates the Group's own requirements for business partners, customers, and suppliers, including with regard to environmental, labor, and social standards in the supply chain.	Procurement Department on behalf of the Executive Board	Upstream	Europe	• UN Universal Declaration of Human Rights • UN Guiding Principles on Business and Human Rights • OECD Guidelines for Multi-national Enterprises • ILO Conventions • UN Convention on the Rights of the Child • UN Global Compact • UN Sustainable Develop-ment Goals (SDGs)
GHG Emissions Accounting Guidance Document	Aims to provide guidance for the uniform accounting of greenhouse gases (GHG) within the HOCHTIEF Group.	Corporate Sustainabiltiy	Own activities	Group	GHG Accounting Principles (in accordance with ESRS E1
Net Zero Roadmap	Transition plan for climate protection with > 50 measures covering all key scope categories. The aim is to achieve decarbonization and interim targets in line with the 1.5-degree target of the Paris Agree-ment. It was developed across the Group in 2023, approved by the Executive Board, and is an integral part of the overall business strategy.	Corporate Sustainabiltiy	Own activities	Group	Paris Agreement
HOCHTIEF position paper on climate change mitigation and adaptation	Describes climate protection targets and measures to avoid greenhouse gas emissions in projects. It has been agreed with all operating units and applies across the entire Group.	Corporate Sustainabiltiy	Entire value cahin	Group	
HOCHTIEF Position Paper on pollution prevention, control, and minimization	Describes environmental protection objectives and measures in six areas of action to prevent environ-mental pollution and manage emissions in projects. Developed in 2024, approved by the Executive Board, and rolled out across the Group.	Corporate Sustainabiltiy	Entire value cahin	Group	
HOCHTIEF Position Paper on water protection	Describes water conservation targets and measures to minimize water consumption, increase reused/ recycled water, and reduce negative impacts on water bodies in our projects. Developed in 2022, approved by the Executive Board, and rolled out across the Group.	Corporate Sustainabiltiy	Entire value cahin	Group	
HOCHTIEF Position Paper on biodiversity and ecosystems	Describes objectives for protecting biodiversity and ecosystems and mitigation measures to preserve, maintain, or improve biodiversity and ecosystems throughout the entire life cycle of projects. Developed in 2022, approved by the Executive Board, and rolled out across the Group.	Corporate Sustainabiltiy	Entire value cahin	Group	

Directive/ Framework	Content	Responsible unit	Impact on the value chain	Scope of application	Internationally recognized reference works
HOCHTIEF Positipon Paper on circular economy	Describes objectives for the efficient use of resources and active contribution to the transition of the construction industry to a circular economy, as well as concrete measures for converting to a circular economy by 2045. Developed in 2022, approved by the Executive Board, and rolled out across the Group.	Corporate Sustainabiltiy	Entire value cahin	Group	
Management systems of Group companies	Regulate operational processes and responsibilities within individual companies.	Operating companies	Entire value cahin	Companies	
HOCHTIEF Business Partner Compliance Due Diligence	Specifies requirements for the careful selection of business partners in order to combat white-collar crime, in particular corruption.	Corporate Compliance	Upstream, own activities	HOCHTIEF Infrastructure, HOCHTIEF PPP Solutions	

Environmental information

ESRS E1
Climate change

This section contains disclosures on HOCHTIEF's material IROs related to climate change. In our double materiality assessment, we have identified five impacts (E1-PI1 to E1-PI3 and E1-NI1 to E1-NI2), four opportunities (E1-O1 to E1-O4), and three risks (IROs E1-R1 to E1-R3). These IROs are listed in the IRO table in the ESRS 2 section, together with disclosures on their location in the value chain, time horizon, and the nature of impacts. Disclosures on the directives and frameworks referred to in this section are also to be found in the ESRS 2 section.

Approach and policies

The climate drives key global cycles and secures the basis of life. Rising greenhouse gas emissions and the loss of biodiversity are increasingly disturbing this equilibrium, with severe, in some cases irreversible long-term consequences for humankind and nature. According to the World Green Building Council, the building and construction sector currently accounts for around 35% of global energy consumption, 38% of energy-related greenhouse gas emissions, and 50% of resource consumption.[1] For HOCHTIEF as an international infrastructure group with resource- and emission-intensive construction as well as other services, climate change is front and center of its sustainability strategy. At the same time, we see ourselves as a catalyst for societal transformation processes needed to successfully adapt to climate change. With resilient projects and expertise in renewable energy, sustainable mobility, and critical infrastructure, we contribute to meeting the challenges of climate change together with our business partners and society.

Issues related to climate change are closely tied to other environmental matters. This is reflected in our reporting with numerous cross-references to the other environmental standards (E2 to E5). The various strategies interlock and reinforce each other. Progress in decarbonization (E1), for example, also indirectly affects impacts in relation to the remaining ESRS—in some cases significantly.

[1] The Net Zero Carbon Buildings Commitment, World Green Building Council

Integration of sustainability-related performance in incentive schemes

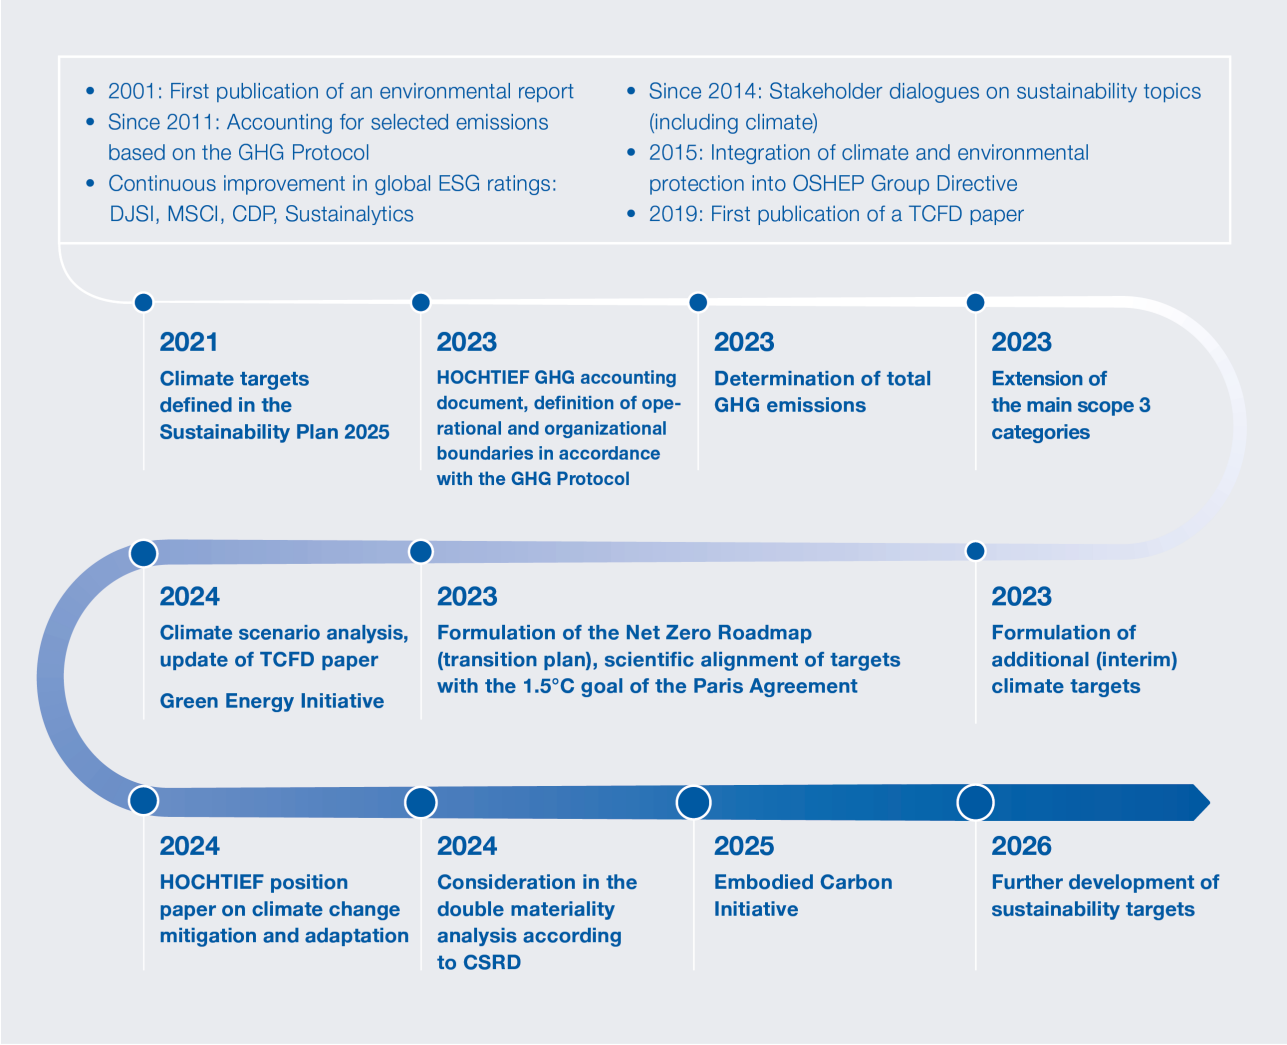
In its variable compensation for the Executive Board, HOCHTIEF considers both financial and non-financial targets, including environmental, social, and governance (ESG) targets. ESG targets accounted for 20% of the total variable compensation for members of the Executive Board in 2025 (further information in the ESRS 2 section). A key component of variable compensation in 2025, with a weighting of 5%, was the goal of developing a Group-wide strategy for the systematic reduction of embodied carbon.

E1-1

HOCHTIEF climate change mitigation strategy

For HOCHTIEF, climate change has long been a fundamental and central focus in its Group-wide environmental sustainability strategy. We plan to expand this strategic focus with the aim of making all our business activities climate-neutral in the long term, and with the goal of supporting our clients through our projects in successfully adapting to climate change. To this end, HOCHTIEF has gathered data on greenhouse gases for over ten years and worked continuously on methodically improving Group-wide coverage, accuracy, and tracking in order to facilitate avoiding and effectively managing GHG emissions in all activities. These activities are enshrined in our HOCHTIEF position paper on climate change mitigation and adaptation and our transition plan for climate change mitigation (our Net Zero Roadmap). As these strategic documents are closely interlinked and build on each other, they are presented in this section together with the main strategic initiatives.

Milestones in the HOCHTIEF climate change mitigation strategy



E1-1 I E1-2

HOCHTIEF transition plan for climate change mitigation: Net Zero Roadmap

HOCHTIEF's transition plan for climate change mitigation (Net Zero Roadmap) is a strategic priority in the HOCHTIEF Group. The content of the HOCHTIEF position paper on climate change mitigation and adaptation was closely based on this plan. It also covers all material HOCHTIEF impacts, risks, and opportunities related to climate change mitigation, climate change adaptation, and energy as well as other relevant environmental subject matter such as the circular economy and biodiversity.

The transition plan sets out more than 50 individual measures for the main scope categories. It identifies the related reduction potential, enabling us to decarbonize and achieve our interim milestones in line with the 1.5 degree target under the Paris Climate Agreement. The measures are based on the HOCHTIEF mitigation hierarchy (for further information, please refer to the chart headed "HOCHTIEF greenhouse gas mitigation hierarchy") and prioritize efficiency improvements to avoid and reduce emissions until alternative solutions can be implemented.

In addition, the Group-wide Green Energy Initiative was developed and formally adopted by the Executive Board in 2024. The Green Energy Initiative supplements the transition plan for climate change mitigation with a list of specific steps to systematically boost energy efficiency in all divisions. The goal is to significantly raise the share

of renewable energy in HOCHTIEF's business activities and value chain while minimizing energy consumption from non-renewable sources. Furthermore, the Group-wide Embodied Carbon Initiative was adopted in 2025. This initiative aims to reduce the emissions associated with construction materials.

Remaining, unavoidable greenhouse gas emissions are to be offset in the future through carbon capture, removal, and storage. This serves to neutralize unavoidable residual emissions in the long term and is the final step in HOCHTIEF's mitigation hierarchy. HOCHTIEF applies a preventive approach here to ensure that carbon removal is supplementary to avoidance and reduction strategies (further information under "Carbon removal").

Resources for the transition plan

Implementation of the transition plan is an integral responsibility of all corporate units and employees and is firmly embedded in all operational units. It is not possible to state the specific allocation of human resources as the activities are frequently interdisciplinary and dynamically assigned, both at corporate and project level and within operational units, with the result that tasks and responsibilities frequently overlap. This is necessarily the case in order to ensure the required levels of flexibility and efficiency in processes.

In addition to decentralized responsibilities, the ACS Group Climate Change Network was launched in the reporting year. This cross-functional working group brings together climate and technical experts from the Group companies. It serves as a coordination platform for creating common foundations and coordinated processes for the Group-wide climate strategy.

In 2025, the Group made good methodological progress in assessing the financial impact of its transition plan for climate protection (Net Zero Roadmap) by developing a harmonized framework for estimating abatement costs (€/tCO_2e) across its key decarbonization measures. This methodology establishes a structured, transparent, and replicable approach to quantifying the potential additional costs of emissions reductions compared to a business-as-usual basis. It distinguishes between CapEx and OpEx, accounts for discounting over the lifetime of the actions, and ensures consistency between cost and emissions system boundaries. This framework was developed to support future strategic decisions, investment prioritization, and internal governance of the transition plan, while strengthening the robustness and comparability of external disclosures.

Building on this methodological development, HOCHTIEF is currently working on applying it to existing decarbonization initiatives covering Scope 1, Scope 2, and selected Scope 3 actions. The assessment covers multiple time horizons and cost scenarios, reflects geographic and business-specific conditions, and integrates structured expert judgments from relevant Group companies to capture operational, technical, financial, and commercial realities. In addition, the analysis explicitly considers the financing of the potential additional costs of emissions reductions compared to a business-as-usual basis, including the possible transferability of costs to customers, which enables a clearer understanding of the net expense for HOCHTIEF companies. This work represents an important step toward integrating cost-efficiency considerations into the implementation and monitoring of the Group's decarbonization strategy.

In the reporting year, no material locked-in greenhouse gas emissions from key HOCHTIEF assets and products were identified that may jeopardize the attainment of our emission reduction targets or drive transition risks. We deliver projects to our clients largely in the capacity of managing contractor, meaning that we have neither major assets nor products with material locked-in emissions.

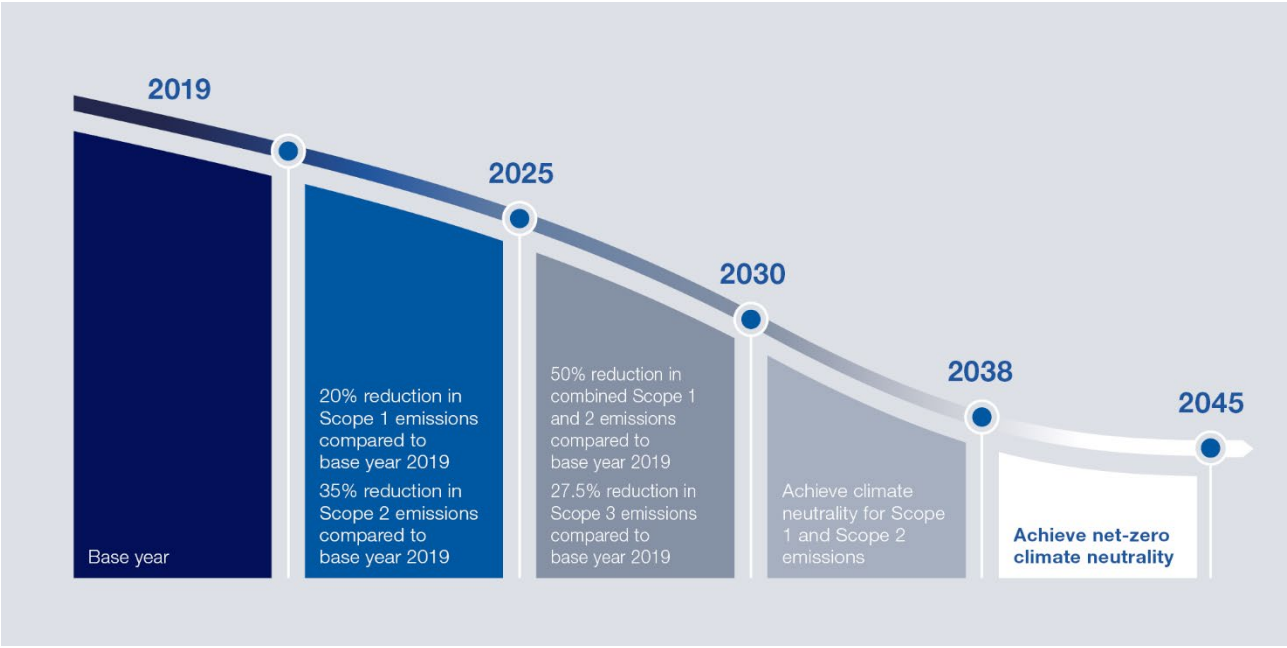
Management of coal, gas, and oil activities

As a global provider of infrastructure solutions, we are in the midst of a major transformation in our business together with clients in the mining industry that benefits the global transition to a more sustainable future. In fiscal 2025, the share of revenue in the HOCHTIEF Group attributable specifically to power plant coal will be 2.3 percent[1].

Critical minerals such as lithium, copper, and nickel are essential for renewable energy and electric mobility technologies. By stepping up our critical minerals services, we are helping to secure the basic resources for these growth technologies. In this way, we are not only advancing the transition to clean energy, but also paving the way for a sustainable mobility transition.

Greenhouse gas reduction targets

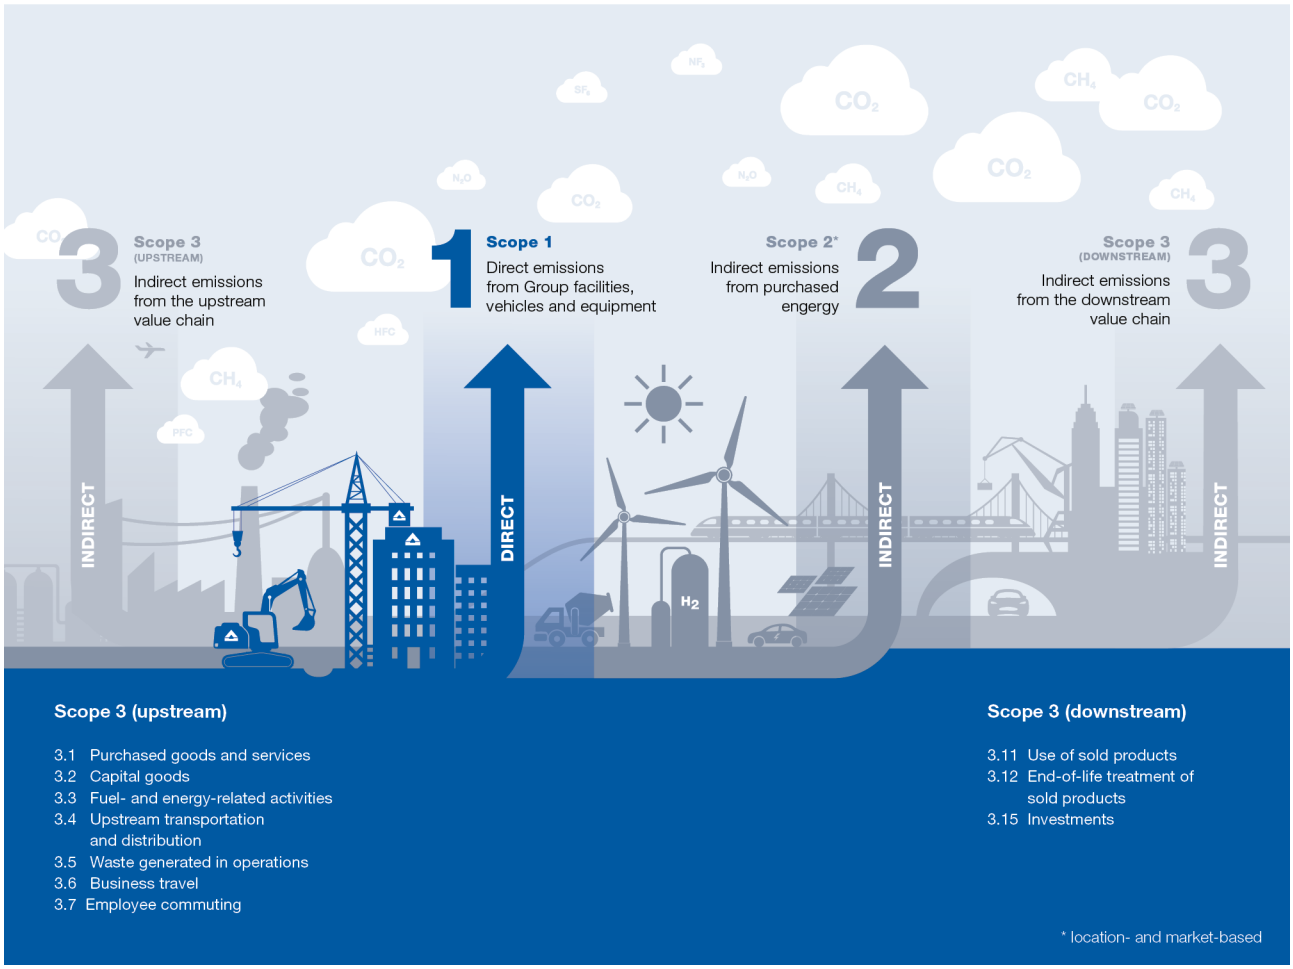
Based on the annual reporting of our Scope 1, Scope 2, and material Scope 3 emissions, and on the release of the first Task Force on Climate-related Financial Disclosures (TCFD) paper, the HOCHTIEF Sustainability Plan 2025 was rolled out throughout the Group in 2022. In this plan, alongside targets for all ESG dimensions, we notably formulated our climate targets and consolidated our Group-wide commitment to climate neutrality (net zero) by 2045. The reduction targets are science-based, formulated to be consistent with the 1.5 degree target under the Paris Climate Agreement and on the basis of the requirements of the Science Based Targets initiative (SBTi), and have been formally adopted by the HOCHTIEF Executive Board. Our climate change mitigation strategy and the associated transition plan are based on these commitments and the additional milestones set in 2023 for 2030.



[1] With our current share of sales (2.3%), we do not meet the minimum requirements of the EU Paris-Aligned Benchmark.

HOCHTIEF GHG accounting

In order to take into account all material emission sources, the HOCHTIEF GHG Accounting Guidance document was compiled in accordance with the internationally recognized Greenhouse Gas Protocol[1] and adopted for the entire Group in 2023. In the reporting year, this document was further developed and standardized across the Group with ACS. As part of this methodology, we also specified our organizational and operational boundaries for data consolidation. We have since tracked greenhouse gas emissions in all material categories (further information on our material categories is provided at the end of this section) in order to monitor the progress of our climate change mitigation strategy. Reporting consistency is assured by matching against the specified GHG emission limits so that our activities and assets are systematically covered and accounted for using uniform criteria. Plausibility checking and validation as part of the data collection process ensure that the baseline accurately reflects actual emissions and serves as a sound foundation for tracking target achievement (further information in the ESRS 2 section). In determining the baseline levels for greenhouse gas emissions, HOCHTIEF has gained full visibility over its emissions and identified the main emission sources in its business activities.



We made further progress during the reporting year in implementing the transition plan and achieving the related reductions in our greenhouse gas emissions. Measures and progress in implementing the transition plan and achieving our targets are described in the sections that follow.

[1] The Greenhouse Gas Protocol – A corporate accounting and reporting standard, revised edition, World Business Council for Sustainable Development und World Resources Institute

E1-1

Climate change adaptation

Advancing climate change is giving rise to risks such as an increase in extreme weather events, major shifts in global supply chains, and growing demand for climate-resilient solutions. As part of the corporate due diligence processes, climate-related impacts, risks, and opportunities are systematically recorded within the Group and assessed step by step in connection with the double materiality assessment using climate risk scenarios with short-, medium-, and long-term time horizons. This process takes into account both physical risks such as extreme weather, flooding, heat exposure, and long-term climate change, as well as transitional risks such as regulatory adjustments, technological developments, and market changes. The underlying analyses and time horizons are based on industry-standard scenario frameworks and were reviewed over the year to reflect insights from relevant market and regulatory developments. This approach helps HOCHTIEF identify potential impacts of our business activities, also regarding the workforce, and value chain at an early stage and develop appropriate measures (information on the topics of climate-related risks, resilience analysis, climate scenario analysis, and risk management in the ESRS 2 section).

We consequently regard climate change as both a key societal challenge and a major strategic opportunity for the HOCHTIEF Group. HOCHTIEF's strong position in innovative projects focused on climate resilience means we already have a sound foundation for the future. This enhances our organizational resilience while creating significant growth opportunities and new business areas. The development and delivery of sustainable, energy-efficient infrastructure is particularly important in this context, as it contributes significantly when it comes to adapting to climate change. Our many years of experience in the design, delivery, and operation of sustainable projects enable us to consistently combine environmental responsibility with our operational capabilities. Sales from such projects are an important performance indicator that underscores the Group's contribution to the climate-friendly transformation of the construction and infrastructure sector. In this way, we are not only advancing the transition to clean energy but also paving the way for a sustainable mobility and technology transition.

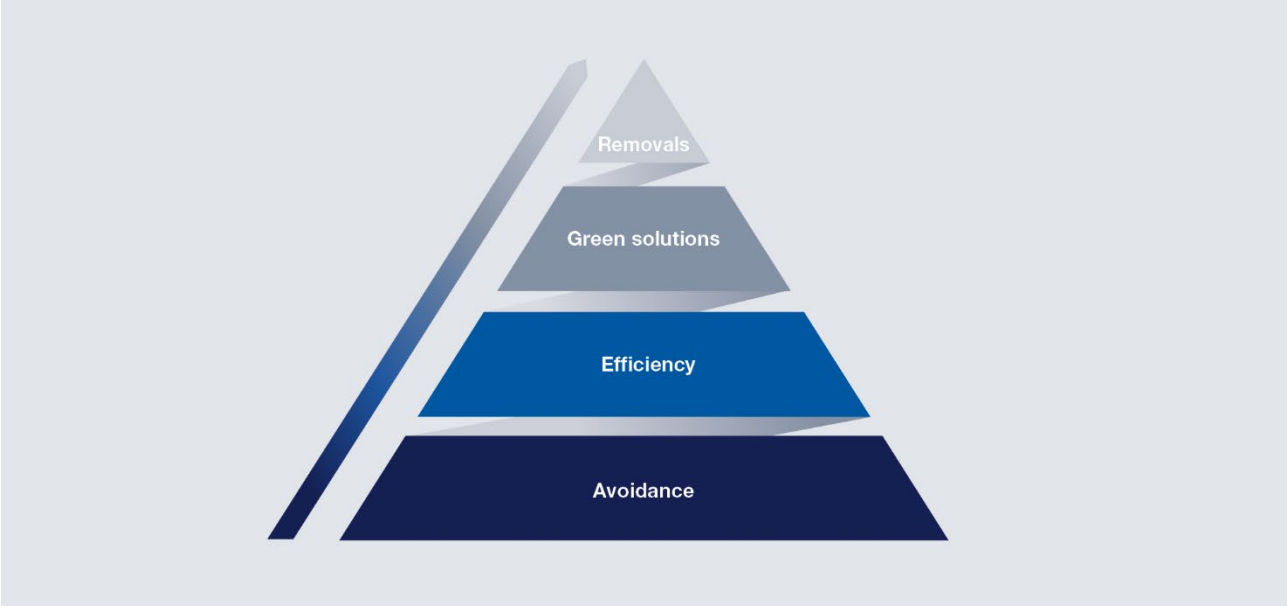
Resilience analysis

As part of the double materiality assessment (DMA), HOCHTIEF assessed the resilience of the current business model with regard to climate risks. Assessments like the climate resilience assessment take into account the likelihood of occurrence and (financial) severity of the risks in relation to the company's ability to avoid or manage them. Further information on the assessments and the corporate processes for (climate) risk management can be found in the ESRS 2 section.

Actions and targets

HOCHTIEF is actively committed to achieving the global climate targets. In this connection, we are working to minimize our carbon emissions beyond the EU reference values and down to climate neutrality/net zero. Under our Net Zero Roadmap transition plan, which is a central component of our sustainability strategy, we are implementing a wide variety of measures throughout the Group for the reduction and avoidance of greenhouse gas emissions as well as for efficient energy management. At the same time, we are working continuously to minimize our material climate-related impacts and risks while evolving our business activities in the direction of climate-neutral processes. HOCHTIEF pursues actions and targets along the greenhouse gas mitigation hierarchy that are directed at avoiding and minimizing GHG emissions and thus contributing to meeting the criteria set out in Delegated Regulation (EU) 2021/2139. This includes various investments and operational initiatives aimed at promoting sustainable practices and technologies in the company's activities.

HOCHTIEF greenhouse gas mitigation hierarch



E1-3

Decarbonization levers in HOCHTIEF's transition plan

HOCHTIEF's actions can be thematically grouped under the four key decarbonization levers in our transition plan: cooperation with clients and partners, increasing efficiency and effectivity, low-emission construction materials and renewable energy. These decarbonization levers not only address HOCHTIEF's main emission sources but also pave the way for continuous reduction of our GHG emissions in all scope categories—in close collaboration with our clients and other stakeholders. Given the constant stream of market innovations and developments along with emerging (regulatory) requirements, we anticipate continuous adjustments to the action taken in order to keep HOCHTIEF on the optimum decarbonization path. Action taken in the reporting year to increase the efficiency of machinery, equipment, and processes led to significant reductions in energy consumption. Emissions have also been significantly reduced by the phased introduction of alternative fuels such as hydrotreated vegetable oil (HVO). The ongoing switch from fossil fueled to electric (and in some cases hybrid) vehicles and equipment has driven further emission reductions. Policies and incentives at HOCHTIEF units, for instance, have ensured that some newly acquired vehicles are electric.

Decarbonization levers in HOCHTIEF's transition plan

With the help of its operating companies, HOCHTIEF has developed a wide range of measures, each of which depends on the specific local conditions and project phases. The most important actions currently being implemented are described below. They are carried out by our operating units in the business activities of the HOCHTIEF Group. Due to their project-related nature, the actions presented do not have a clearly defined end date, but are continuously implemented along the entire value chain in HOCHTIEF's regions of operation over the short-, medium-, and long-term time horizons specified in the ESRS 2 section. The measures presented address all material impacts, risks, and opportunities identified for the HOCHTIEF Group in relation to climate change mitigation, climate change adaptation, and energy (as well as other material environmental matters, such as circular economy, biodiversity, and air pollution). Responsibility for implementation lies with the HOCHTIEF units, and progress is tracked against the targets by monitoring, reporting, and control (further information in the ESRS 2 section).

Cooperation with clients and business partners (E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, and E1-R1 to E1-R3)

Cooperation with clients and business partners is essential to the successful implementation of our transition plan and can be considered an overall driver in the implementation of action for all of the decarbonization levers and the subject matter of the remaining environmental sections. Our stakeholders are crucial to implementing sustainability measures in our projects. Above all, this applies to clients who determine the conditions and scope for sustainable solutions—in some cases prior to the project award phase—and to our suppliers who provide low-emission construction materials and efficient machinery.

This means we work proactively with our clients to propose project-specific, low-emission solutions at all project stages. From HOCHTIEF's standpoint, giving greater and broader account to such low-carbon solutions and other sustainability criteria in the contract tendering and award process is important in ensuring that decarbonization is tackled by all those involved in the value chain. This makes it possible to make low-emission business practices commercially viable in our industry, which in turn opens the way to long-term demand for sustainable technologies and solutions as well as the establishment of such solutions by our suppliers and business partners. Especially with regard to low-emission (construction) materials, more efficient and zero-emission machinery, and sustainable services, market incentives can hence be provided for developing innovative solutions along with key impetus for future legislation.

This collaboration is a key lever in HOCHTIEF's decarbonization strategy to drive the transformation of the construction and infrastructure sector toward greater sustainability. It paves the way for construction projects to incorporate renewable energy sources as well as for the use of low-carbon materials, the implementation of efficient processes, and the promotion of circular economy concepts. HOCHTIEF regards all parties involved in projects as active partners in developing and realizing innovative and sustainable solutions.

Jointly setting goals early on, adapting design processes, and integrating sustainable approaches can make for more effective and resource-efficient project implementation. This kind of collaboration leads to the implementation of the following decarbonization measures:

- Promotion of sustainable design—embodied carbon
- Promotion of sustainable design—operational carbon
- Performance of life cycle analyses/project carbon footprint analyses and optimization consulting
- Promotion of circular design to reduce end-of-life project emissions
- Increase in the proportion of projects with early contractor involvement/integrated project delivery
- Promotion of project certification
- Promotion of sustainable travel and mobility solutions for business travel and commuting

Increasing efficiency and effectiveness (E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, and E1-R1 to E1-R3)

Increasing efficiency and effectiveness is a key decarbonization lever at HOCHTIEF that cuts across various segments of our value chain, generating considerable potential for reducing greenhouse gas emissions across all scope categories. Resource- and energy-efficient design and project planning and execution can deliver savings in terms of material requirements (embodied carbon) and our waste volumes, while energy-efficient technologies reduce emissions in all project phases. Increasing the energy efficiency of our machinery and equipment plays a key role in our direct operating activities as it enables us to continuously reduce fuel-related emissions. In our project activities, for example, we are increasingly using machinery that meets stricter emission limits with advanced powertrains (such as Stage V engines), thus minimizing greenhouse gas and air pollutant emissions. Cutting-edge control systems and employee training also lead to emission reductions. Measures to boost efficiency and effectiveness across our activities and the entire value chain:

- Technological improvement of construction machinery and vehicle energy efficiency
- Product solutions optimized across the board for growing markets such as high-tech, the energy transition, and sustainable infrastructure that operate efficiently, economically, and cleanly throughout their entire life cycle
- Effective resource management and waste avoidance by way of optimized design, construction, and operation processes based on, for example, BIM, IoT, digitalization, and innovation
  Identification of avoidable energy losses by metering and monitoring on our own buildings and construction sites, together with general measurement and tracking of fuel consumption
- Training and awareness campaigns to reduce emissions
- Use of smart, digital solutions—from digital planning tools to apps—for more efficient operation of PPP projects
- Optimization of transport and logistics for the supply of construction sites; green transport and logistics methods
- Improved energy efficiency through all project phases, including operation
- Optimization of construction process efficiency, including by off-site prefabrication
- Increasing the energy efficiency of our own buildings and construction sites

Low-emission construction materials
(E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, and E1-R1 to E1-R3)

The use of low-emission materials is a key lever in HOCHTIEF's decarbonization strategy as a large proportion of our emissions come from our materials purchases (Scope 3.1). In particular, decarbonization in the upstream production of concrete, steel, and asphalt is crucial to HOCHTIEF's successful decarbonization. Measures here range from using recycled materials and promoting innovative, low-emission production processes for materials such as steel, concrete, and asphalt to incorporating renewable building materials such as timber. HOCHTIEF Czech Republic, for example, is the lead partner in a national research and development project in collaboration with the Technical University in Prague. The project aims to develop a new type of ecoduct based on special self-supporting prefabricated elements.

Using existing building fabric (refurbishment) not only significantly reduces the need for additional resources and the related emissions, but also generates financial benefits for HOCHTIEF and its clients. We can additionally reduce our Scope 3 emissions by basing supplier and subcontractor selection on sustainability criteria. The strategic use of recycled, resource-efficient, and innovative materials and solutions reduces environmental impacts and lays the groundwork for sustainable, economically efficient construction processes. Key measures comprise:

- Development of the HOCHTIEF Embodied Carbon Initiative to reduce embodied carbon
- Increasing the use of low-carbon variants of mainstream materials (concrete, steel, asphalt, and glass)
- Increasing recycled content in construction materials
- Use of bio-based materials (such as timber)
- Stepping up sustainable procurement practices
- Reuse of existing building fabric
  (ideally by the use of cataloging and digital building passports)
- Promotion of projects using existing fabric
- Promotion of projects optimized for repurposing

Deployment of renewable energy
(E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, and E1-R1 to E1-R3)

Our operations, our value chain, and our projects in their operational phase consume large amounts of energy that account for a big slice of Group greenhouse gas emissions. The Group-wide Green Energy Initiative actively promotes the integration of renewable energy sources into our business activities. The following thematic areas directly relate to energy as a decarbonization lever:

- **Production and purchase of renewable energy**: Our Scope 2 emissions are reduced by purchasing renewable energy or entering into long-term power purchase agreements (PPAs). HOCHTIEF additionally promotes renewable energy generation in projects using solar panels, wind turbines, and energy storage and distribution systems. Moreover, this avoids Scope 1 emissions from direct energy consumption and provides renewable energy—in some cases generated on our construction sites themselves—to meet the increasing indirect energy (electricity) requirements for electric construction plant and equipment.

- **Incorporating renewable energy generation into our projects**: In addition to consistently reducing the energy requirements of buildings, we proactively offer our clients comprehensive solutions for integrating renewable energy generation systems into their projects.

Climate change adaptation

Resilient infrastructure
(E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, and E1-R1 to E1-R3)

As climate change continues, extreme weather events such as heavy rainfall and associated flooding, prolonged heat waves, and seasonal changes place additional demands on our projects in terms of resilience and longevity. This calls for the use of durable materials and solutions that can withstand conditions under a range of climate scenarios. With our resilient projects, we actively help to protect clients, local communities, and nature. Examples include flood and erosion control measures, using durable materials, and designing our projects for resilience to extreme precipitation and increasing temperature variation with features such as concrete core activation, green walls and roofs, and suitable drainage systems. Furthermore, HOCHTIEF sees the increased demand for resilient projects as a major business opportunity and we are confident that we can build on our extensive expertise in this field.

Transformative projects
(E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, and E1-R1 to E1-R3)

Besides necessitating greater resilience in our projects, climate change drives steady growth in demand for new projects essential to transformative processes. These notably include energy, mobility, and digital infrastructure projects. HOCHTIEF is not only involved in all of these areas but is actively and systematically reinforcing its position here to consistently leverage the resulting opportunities for long-term business growth. Examples include battery energy storage systems, strategic alliances, and projects to develop the charging infrastructure of the future.

Energy transition
(E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, and E1-R1 to E1-R3)

The global energy transition calls for a significant expansion of renewable energy generation infrastructure and related projects to store, transmit, and distribute the energy generated. Alongside delivering numerous projects and thereby honing its expertise in this area over the past few decades, HOCHTIEF has enshrined this thematic area in its Green Energy Initiative.

- **Renewable energy generation projects**: HOCHTIEF delivers projects for the generation of renewable energy and has a substantial project portfolio, especially with regard to solar farms. Looking ahead, we plan to further expand this market position in close collaboration with our clients—and with it global renewable energy generating capacity.
- **Energy transition projects**: In addition to constructing renewable energy generation assets, HOCHTIEF is involved in delivering other energy transition projects such as battery energy storage systems, battery factories, energy grids, and hydrogen projects. Likewise with regard to the extraction of resources such as copper and lithium needed for the energy and mobility transition, HOCHTIEF contributes significantly with its services to meeting the rising demand for critical materials.

Mobility transition
(E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, and E1-R1 to E1-R3)

Besides the general decarbonization of the energy sector, low-emission solutions are required in the mobility sector—such as charging points for electric vehicles or all-electric public transport systems. Alongside alternative forms of propulsion, automating transportation systems holds vast potential for efficiency gains. Here, too, HOCHTIEF deploys its existing expertise to deliver projects in collaboration with public and private-sector partners. We perceive the growing demand for such solutions as a long-term business opportunity for HOCHTIEF.

Digitalization
(E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, and E1-R1 to E1-R3)

Cross-sectoral process digitalization and the increasing use of artificial intelligence (AI) for big-data applications are an integral part of successfully adapting to the complex dynamics of global climate change. The steadily growing market for digital infrastructure (such as data centers and semiconductor labs) as well as hardware solutions for AI-based applications opens up huge market potential for HOCHTIEF and the opportunity to further extend its competitive position in these areas. We also support our clients with innovative, digital solutions, such as digital twins, to make projects more efficient and effective from design through operation.

Deglobalization
(E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, and E1-R1 to E1-R3)

Prolonged conflicts and current political developments make it increasingly likely that critical infrastructure will be reverted to national level. As climate change progresses, this trend may also be further exacerbated, thus radically reshaping international supply chains. Disruptive events such as global pandemics, droughts, and resource scarcities can also drive a return of such industries. This means that, in order to ensure the long-term profitability of our business activities, we need to switch to secure, local sourcing of materials and services. HOCHTIEF thus faces the challenge of adapting its international activities to local conditions in a decentralized fashion in order to improve the resilience of its own value chains. At the same time, HOCHTIEF sees itself as a partner with extensive expertise in implementing such projects for our clients in the markets we serve.

E1-4
Climate change mitigation, climate change adaptation, and energy efficiency: targets[1, 2]

Our targets in the areas of climate change mitigation, climate change adaptation, and energy efficiency are fundamental commitments adopted by the Executive Board in the Sustainability Plan 2025. These targets are based on climate scenarios (further information in the ESRS 2 section), are science-based, and were formulated together with experts in line with the 1.5 degree target under the Paris Climate Agreement on the basis of the requirements of the Science Based Targets initiative (SBTi) (to date without external verification). The base year was selected as 2019 due to the Covid pandemic and the fact that our business was not significantly affected by extraneous factors in that year. By tracking our emissions on a quarterly, Group-wide basis in accordance with the Greenhouse Gas Protocol (GHG Protocol), we ensure that our targets are consistent with the limits of our greenhouse gas inventory while measuring the effectiveness of our decarbonization levers (actions) (further information in the ESRS 2 section).

Decarbonization requires significant technological advancements, particularly in materials, machinery, and equipment. We are very much dependent on our suppliers in this respect and will be working with them to promote these advancements. Due to the strong interactions and cross-scope effects between the various actions associated with the decarbonization levers, the individual reduction contributions cannot be precisely estimated. The current status with regard to the targets directly reflects the progress of our transition plan.

HOCHTIEF's climate change mitigation, climate change adaptation, and energy efficiency targets are set out in the following. HOCHTIEF's goals related to climate protection, climate change adaptation, and energy efficiency are geared to minimizing our material climate-related impacts and risks and to the evolution of our business activities in the direction of climate-neutral processes.

[1] Targets correspond to the Sustainability Plan 2025 (details under ESRS 2, General disclosures).
[2] Certain ESRS 2 MDR-T disclosure requirements (79 (a), 79 (e), 80 (f), 80 (g), 80 (h), 80 (i), and 80 (j)) are met by disclosures in ESRS 2, General disclosures.

Target[1]: At least a 20% reduction in Scope 1 emissions by 2025 relative to the 2019 base year and climate neutrality in Scope 1 emissions[2] by 2038

IROs: E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, E1-R1 to E1-R3	**Base year:** 2019	**Target year:** 2038	**Milestone target year:** 2025	**Measurement of progress:** quarterly, Group-wide, and per operating unit
	Baseline[3]: 371,597 t CO_2e (100%)	**Target:** Climate neutrality (2038)	**Milestone target value:** Reduction by at least 20% (2025)	**Geographical boundaries:** worldwide
			Value chain: ○ upstream ● own activities ○ downstream	

Target-setting methodologies and assumptions:

The target is a key component of HOCHTIEF's decarbonization strategy. Reducing direct (Scope 1) emissions is a key factor in achieving the climate targets as direct emissions account for a large share of our total carbon emissions. We can cut these emissions significantly with targeted action such as deploying low-emission technologies, process improvements, and greater use of alternative forms of propulsion. An annual reduction in emissions of around 3% was assumed for the interim target by 2025, as this target requires progressive conversion of existing machinery and equipment. Further ahead, a larger reduction of around 6% per year and climate neutrality for Scope 1 are assumed by 2038, as technological alternatives increasingly become available.

Status and trend analysis:

According to the scope of consolidation underlying the Sustainability Plan 2025, Scope 1 emissions amounted to 233,959 tons of CO_2e in the reporting year. Up to the end of the reporting year, we have already reduced absolute Scope 1 emissions by 137,638 metric tons of CO_2e compared to 2019, our base year, corresponding to a 37% reduction. Taking into account our increased sales, we have reduced our Scope 1 intensity by no less than 60% compared to 2019. This reduction was achieved by implementing the actions and initiatives described above. We are consequently well on target. In relation to the current scope of consolidation, Scope 1 emissions amounted to 2,075,905 tons of CO_2e in the reporting year. The significant difference in GHG emissions between the scope of consolidation underlying the Sustainability Plan 2025 and the current scope of consolidation results from the change in accounting for emissions in Scope 1 instead of Category 3.15 as in the previous year.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] Corresponding to at least a 95% reduction in GHG emissions in accordance with the requirements of the Science Based Targets initiative.
[3] Due to the estimation method applied in the reporting year to exclude subcontractor consumption in the Scope 1 and Scope 2 emissions of the CIMIC Group, this understanding was also applied retrospectively to the 2019 base year and adjusted accordingly.

Target[1]: At least a 35% reduction in location-based Scope 2 emissions by 2025 relative to the 2019 base year and climate neutrality by 2038[2]

IROs: E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, E1-R1 to E1-R3	**Base year:** 2019	**Target year:** 2038	**Milestone target year:** 2025	**Measurement of progress:** quarterly, Group-wide, and per operating unit
	Baseline[3]: 108,243 t CO_2e (100%)	**Target:** Climate neutrality (2038)	**Milestone target value:** Reduction by at least 35% (2025)	**Geographical boundaries:** Worldwide
			Value chain: ○ upstream ● own activities ○ downstream	

Target-setting methodologies and assumptions:

The target is a key component of HOCHTIEF's decarbonization strategy. Reducing indirect (Scope 2) emissions—mainly from energy consumption in our office buildings and on construction sites—plays a key role in achieving our climate targets. We are reducing emissions with targeted action such as switching to renewable energy sources, improving energy efficiency in our projects and at our office sites, and greater use of renewable energy. An annual reduction in emissions of around 6% was assumed for the interim target by 2025, which can be achieved in the short term by increasing efficiency as well as by sourcing and using renewable energy. Further ahead, a smaller reduction of around 5% per year and climate neutrality for Scope 2 are assumed by 2038, as more electricity will be needed due to the switch from fossil fuels to electric propulsion.

Status and trend analysis:

According to the scope of consolidation underlying the Sustainability Plan 2025, Scope 2 emissions amounted to 67.981 tons of CO_2e (location-based) in the reporting year. Up to the end of the reporting year, we have already reduced absolute Scope 2 emissions (location-based) by 40,262 metric tons of CO_2e compared to 2019, our base year, corresponding to a 37% reduction. Taking into account our increased sales, we have reduced our Scope 2 intensity by no less than 60% compared to 2019. We achieved this significant reduction through extensive project-level and Group-wide initiatives, such as the Green Energy Initiative. The use of renewable energy is key to further reducing Scope 2 emissions. This can be achieved by purchasing renewable energy and also increasingly by generating renewable energy in projects themselves. In relation to the current scope of consolidation, Scope 2 emissions amounted to 58,956 tons of CO_2e in the reporting year.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] Corresponding to at least a 95% reduction in GHG emissions in accordance with the requirements of the Science Based Targets initiative.
[3] Due to the estimation method applied in the reporting year to exclude subcontractor consumption in the Scope 1 and Scope 2 emissions of the CIMIC Group, this understanding was also applied retrospectively to the 2019 base year and adjusted accordingly.

Target[1]: At least a 50% reduction in combined Scope 1 and 2 emissions by 2030 relative to the 2019 base year and climate neutrality by 2038[2]

IROs: E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, E1-R1 to E1-R3	**Base year:** 2019	**Target year:** 2038	**Milestone target year:** 2030	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline[3]: 479,840 t CO_2e (100%)	**Target:** Climate neutrality (2038)	**Milestone target value:** Reduction by at least 50% (2030)	**Geographical boundaries:** worldwide
			Value chain: ○ upstream ● own activities ○ downstream	

Target-setting methodologies and assumptions:

Adopting a combined target for Scope 1 and Scope 2 emissions (location-based) is logical since the two emission categories are closely linked and influence each other. Scope 1 emissions (share of combined emissions in base year: ~75%) relate directly to fuel consumption for construction vehicles, machinery, and other operational activities while Scope 2 emissions (share of combined emissions in base year: ~25%) mainly result from energy consumption at our office sites and in our projects. Since both types of emissions are heavily dependent on technology choices—such as machinery that consumes energy and at the same time generates emissions—many measures to cut Scope 1 emissions can also have a positive impact on Scope 2, notably by switching to more energy-efficient and lower-emission technologies. We expect Scope 1 and Scope 2 emissions to make a similar contribution to target achievement.

A combined target allows us to follow an integrated approach and harness synergies in reduction activities that relate to both the direct consumption of fossil fuels as well as the energy needed for plant and office operations. HOCHTIEF can thus implement its decarbonization strategy more efficiently by optimizing and coordinating technical solutions such as the use of electrically powered machinery and equipment or the switch to renewable energy sources throughout the Group. An integrated target of this kind lends greater impact to the action taken and facilitates achieving superordinate climate targets.

Status and trend analysis:

According to the scope of consolidation underlying the Sustainability Plan 2025, the absolute combined Scope 1 and Scope 2 emissions in the reporting year amounted to 301,939 metric tons of CO_2e. Up to the end of the reporting year, we have already reduced absolute combined Scope 1 and Scope 2 emissions (location-based) by 177,901 metric tons of CO_2e compared to 2019, our base year, corresponding to a 37% reduction. Taking into account our increased sales, we have reduced our combined Scope 1 and Scope 2 intensity by no less than 60% compared to 2019. This was achieved through extensive project-level actions and Group-wide initiatives. Based on the current scope of consolidation, the absolute combined Scope 1 and Scope 2 emissions in the reporting year amounted to 2,144,861 metric tons of CO_2e. The significant difference in GHG emissions between the scope of consolidation underlying the Sustainability Plan 2025 and the current scope of consolidation results from the change in accounting for emissions in Scope 1 instead of Category 3.15 as in the previous year.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] Corresponding to at least a 95% reduction in GHG emissions in accordance with the requirements of the Science Based Targets initiative.
[3] Due to the estimation method applied in the reporting year to exclude subcontractor consumption in the Scope 1 and Scope 2 emissions of the CIMIC Group, this understanding was also applied retrospectively to the 2019 base year and adjusted accordingly.

Target[1]: At least a 27.5% reduction in Scope 3 emissions by 2030 relative to the 2019 base year and climate neutrality by 2045[2]

IROs: E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, E1-R1 to E1-R3	**Base year:** 2019	**Target year:** 2045	**Milestone target year:** 2030	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline[3]: 7,063,919 t CO_2e (100%)	**Target:** Climate neutrality (2045)	**Milestone target value:** Reduction by at least 27.5% (2030)	**Geographical boundaries:** worldwide
	Unit: relative (%)		**Value chain:** ● upstream ○ own activities ● downstream	

Target-setting methodologies and assumptions:

The target is a key component of HOCHTIEF's comprehensive decarbonization strategy. Scope 3 emissions relate to the upstream and downstream value chain and account for a significant proportion of total carbon emissions.

The 2030 milestone includes the following Scope 3 categories that are material for HOCHTIEF: 3.1 Purchased goods and services, 3.2 Capital goods, 3.3 Fuel- and energy-related activities, 3.4 Upstream transportation and distribution, 3.5 Waste generated in operations, 3.6 Business travel, 3.7 Employee commuting, 3.11 Use of sold products, and 3.12 End-of-life treatment of sold products.

Reducing Scope 3 emissions is even more challenging than reducing Scope 1 and 2 emissions because these depend significantly on other parties such as clients and suppliers. Compared to Scope 1 and Scope 2 emissions, reducing Scope 3 emissions requires even closer collaboration and coordination with clients and business partners along the entire supply chain.

Integrating all significant Scope 3 emissions into the decarbonization strategy was a significant step as they make up a large proportion of total emissions in the upstream and downstream value chain. Reducing Scope 3 emissions creates a win-win situation for ourselves, our clients, and other business partners as we work together to develop more sustainable solutions, reduce costs, and advance their own climate targets, ultimately leading to a stronger market position and more sustainable business practices for all those involved.

Status and trend analysis:

According to the scope of consolidation underlying the Sustainability Plan 2025, absolute Scope 3 emissions amounted to 5,222,717 metric tons of CO_2e in the reporting year. Up to the end of the reporting year, we have already reduced absolute Scope 3 emissions by 1,841,202 metric tons of CO_2e compared to 2019, our base year, corresponding to a 25% reduction. Taking into account our increased sales, we have reduced our Scope 3 intensity by no less than 53% compared to 2019. Collaboration with our clients and suppliers (decarbonization lever 1) to promote further reductions is particularly important when it comes to reducing Scope 3 emissions. Based on the current scope of consolidation, absolute Scope 3 emissions amounted to 5,624,807 metric tons of CO_2e in the reporting year.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] Corresponding to at least a 90% reduction in GHG emissions in accordance with the requirements of the Science Based Targets initiative.
[3] Due to the estimation method applied in the reporting year to exclude subcontractor consumption in the Scope 1 and Scope 2 emissions of the CIMIC Group, this understanding was also applied retrospectively to the 2019 base year and adjusted accordingly.

Target[1]: Climate neutrality (net zero) by 2045[2]

IROs: E1-PI1 to E1-PI3, E1-NI1 to E1-NI2, E1-O1 to E1-O4, E1-R1 to E1-R3	**Base year:** 2019	**Target year:** 2045	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline[3]: 7,543,75 t CO_2e 100%	**Target:** Climate neutrality (2045)	**Geographical boundaries:** worldwide

Value chain:
upstream own activities downstream

Target-setting methodologies and assumptions:

The climate neutrality target (Scope 1, Scope 2 (location-based), and Scope 3) is particularly important for HOCHTIEF as our activities have a substantial carbon footprint. Emissions in relation to this target were as follows in our base year: Scope 1 around 6%, Scope 2 around 2%, and Scope 3 around 92%. This makes it essential to reduce emissions along our entire value chain, from design and construction to operation and maintenance. With this target, we are living up to our corporate responsibility and contributing significantly to the mitigation of climate change.

It also means that we are helping our clients achieve their own emissions targets while honing our competitive edge and commanding the position of a key partner and driver in sustainable construction practices. As a major player in the industry, we can make a big difference with regard to reducing carbon emissions—including in terms of GHG emissions from construction materials—with a view to leading the entire sector toward a more climate-friendly future. Through our additional, specific reduction targets for Scopes 1, 2, and 3, we create incentives and transparency across all activities.

Status and trend analysis:

According to the scope of consolidation underlying the Sustainability Plan 2025, total greenhouse gas emissions for Scope 1, Scope 2, and Scope 3 (site-based) amounted to 5,524,657 metric tons of CO_2e. Compared to our base year of 2019, we reduced total emissions in the reporting year by 2,019,102 metric tons of CO_2e, which corresponds to a reduction of 27%. Taking into account our increased sales, we have thus reduced our total intensity by no less than 53% compared to 2019. These reductions were achieved in Scope 1, Scope 2, and Scope 3. In relation to the current scope of consolidation, total emissions in the reporting year amounted to 7,769,668 metric tons of CO_2e.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] Corresponding to at least a 90% reduction in GHG emissions in accordance with the requirements of the Science Based Targets initiative.
[3] Due to the estimation method applied in the reporting year to exclude subcontractor consumption in the Scope 1 and Scope 2 emissions of the CIMIC Group, this understanding was also applied retrospectively to the 2019 base year and adjusted accordingly.

E1-5

Energy consumption and mix

In the double materiality assessment and within the context of our business activities, climate change, climate change adaptation, and energy efficiency were identified as material matters in the reporting year. The resulting metrics for the reporting year are shown below.

Energy consumption and energy mix in the HOCHTIEF Group[1, 2]

	2025 (Reference: SP 2025)[3]	2025
Fuel consumption from crude oil and petroleum products (MWh)	859,496	7,721,255
Fuel consumption from natural gas (MWh)	38,467	38,481
Consumption of purchased or acquired electricity, heat, steam, and cooling from fossil sources (MWh)	142,544	137,429
Total fossil energy consumption (MWh)	**1,040,507**	**7,897,164**
Share of fossil sources in total energy consumption (%)	**93%**	**99%**
Total consumption from nuclear sources (MWh)	**19,994**	**17,874**
Share of consumption from nuclear sources in total energy consumption (%)	**2%**	
Fuel consumption for renewable sources (MWh)	45,185	20,732
Consumption of purchased or acquired electricity, heat, steam, and cooling from renewable sources (MWh)	10,268	13,716
Consumption of self-generated non-fuel renewable energy (MWh)	323	654
Total renewable energy consumption (MWh)	**55,776**	**35,101**
Share of renewable sources in total energy consumption (%)	**5%**	**1%**
Total energy consumption (MWh)	**1,116,276**	**7,950,140**
Energy intensity[4] per revenue (MWh/EUR million)	30	208

[1] Based on the regulatory requirements for companies in the CIMIC Group, subcontractor energy consumption is accounted for under Scopes 1 and 2 for projects with operational control. For reasons of consistency, these are reported in GHG accounting for the HOCHTIEF Group under Scope 3 category 1, Purchased goods and services. An estimation method was therefore used to eliminate subcontractor energy consumption from the CIMIC Group's Scope 1 and Scope 2 emissions.
[2] Includes all energy consumption reported in Scope 1 and Scope 2
[3] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[4] Energy intensity is calculated as total energy consumption in relation to sales.

HOCHTIEF Group energy generation

	2025 (Reference: SP 2025)[1]	2025
Energy generation from renewable sources (MWh)	247,901	248,260
Energy generation from non-renewable sources (MWh)[2]	58,860	609,110

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] The quantities generated from non-renewable sources were used for own consumption. They are therefore included in total fossil energy consumption in the above table showing the energy consumption and energy mix of the HOCHTIEF Group.

E1-6

Gross Scopes 1, 2, 3 and total GHG emissions

HOCHTIEF Group GHG emissions[1, 2, 3, 4]

	Retrospective				Milestones and targets				
Scope 1 GHG emissions (tCO_2eq)	2019	2024	**2025**	%	2025	2030	2038	2045	Annual % target / Base year
Gross Scope 1 GHG emissions			2,075,905						
Percentage of Scope 1 GHG emissions from regulated emission trading schemes (%)			–						
Scope 2 GHG emissions (tCO_2eq)									
Gross location-based Scope 2 GHG emissions			68,956						
Gross market-based Scope 2 GHG emissions[5]			64,442						
Significant scope 3 GHG emissions (t CO_2eq)									
Total Gross indirect (Scope 3) GHG emissions			5,624,807						
3.1 Purchased goods and services			2,740,253						
3.2 Capital goods			94,726						
3.3 Fuel and energy-related activities (not included in Scope 1 or Scope 2)			488,856						
3.4 Upstream transportation and distribution			70,408						
3.5 Waste generated in operations			11,297						
3.6 Business travel			39,795						
3.7 Employee commuting			77,388						
3.8 Upstream leased assets			N.A.						
3.9 Downstream transportation and distribution			N.A.						
3.10 Processing of sold products			N.A.						
3.11 Use of sold products			2,002,316						
3.12 End-of-life treatment of sold products			8,503						
3.13 Downstream leased assets			N.A.						
3.14 Franchises			N.A.						
3.15 Investments			91,266						
Total GHG emissions (t CO_2eq)									
Total GHG emissions (location-based)			7,769,668						
Total GHG emissions (market-based)			7,765,154						
Total GHG emissions per revenue[6] (t CO_2eq/EUR million)									
Total GHG emissions (location-based) per revenue			203						
Total GHG emissions (market-based) per revenue			203						

[1] Based on the regulatory requirements for companies in the CIMIC Group, subcontractor energy consumption is accounted for under Scopes 1 and 2 for projects with operational control. For reasons of consistency, these are reported in GHG accounting for the HOCHTIEF Group under Scope 3 category 1, Purchased goods and services. An estimation method was therefore used to eliminate subcontractor energy consumption from the CIMIC Group's Scope 1 and Scope 2 emissions.
[2] For the 2025 reporting year, CIMIC Group company Thiess is fully consolidated in the HOCHTIEF Group. Comparability of the current non-financial Group data with the prior year and earlier reporting years is therefore limited. Please also refer to the ESRS 2 section.
[3] Biogenic emissions amounted to 80,840 metric tons of CO_2e in the 2025 reporting year (18,548 metric tons of CO_2e, comparable to the Sustainability Plan 2025).
[4] Current scope of consolidation.
[5] In the reporting year 2024, market-based Scope 2 emissions (57,928 tons of CO_2e emissions) were corrected retrospectively. The corrected value for 2024 is 81,084 tons of CO_2e. This was due to an error in data provided relating to a specific market-based emission factor for electricity. This correction does not have an impact on any other indicators.
[6] The GHG intensities represent the ratio of total GHG emissions to sales.

E1-7

Carbon removal

The transition plan for climate change mitigation is our net zero roadmap and specifies the key actions for systematically reducing our greenhouse gas emissions. We proactively identify opportunities to use carbon removal or offsetting in relation to residual emissions that cannot be fully avoided. HOCHTIEF aims to incorporate measures of this kind into projects in order to achieve climate neutrality (decarbonization lever 1). This generally takes the form of a service for our clients and is contractually agreed. Various aspects are addressed in this regard:

- Certain construction materials such as concrete can absorb carbon during a project's operation—a process known as carbonation. Depending on their longevity, surface porosity, and environmental exposure, such materials can reabsorb a significant proportion of the carbon emitted during production. Deliberately using concrete and other construction materials to absorb and sequester carbon is one way of removing it from the atmosphere. HOCHTIEF aims to continue pushing ahead with such options together with our suppliers and clients.
- Alongside conventional construction materials, bio-based alternatives (such as timber) are playing an increasing role in the market. During their growth phase, these absorb carbon from the atmosphere and store it organically. This can result in a positive net carbon impact when used as a construction material.
- Many of our projects include extensive recultivation and rehabilitation services. This allows HOCHTIEF to restore ecosystems that remove carbon from the atmosphere and sequester it in organic matter.
- Use of biogenic carbon from biomass or biochar as a carbon sink for the production of sustainable concrete and asphalt.

Going beyond these examples, we regard carbon removal as an additional part of our climate change mitigation strategy, which combines innovative materials, sustainable processes, and partnership with our clients and suppliers. Carbon removal is an area we expect to become an increasingly important requirement for clients. HOCHTIEF continuously tracks relevant market developments in these areas in order to develop suitable services on this basis both for its own use and for clients.

E1-8

Internal carbon pricing

A key element of successful decarbonization in the construction industry is the creation of targeted incentive systems. These foster innovation and strengthen the focus on sustainable solutions throughout a project's life cycle. An effective tool in this context is an internal carbon price that our clients take into account when awarding contracts. This is expedient as it guides decision making toward low-carbon construction practices and materials while promoting responsibility for climate change mitigation along the value chain.

We took further steps toward establishing a carbon price of this kind in the reporting year and have developed an initial approach that is currently being tested and analyzed. The aim for the future is to create an effective internal carbon pricing system that helps cut carbon emissions across all project phases while staying cost-effective. Initial successes with taking subcontractors' carbon footprint into account in a pilot project encourage us to take this approach further. It creates incentives for our subcontractors to develop and implement innovative, low-emission solutions.

Notes on ESRS E1 metrics: Methodology and data sources

Transparent and verifiable data collection is critical to making informed judgments about the development of our strategy, actions, and targets in relation to our material impacts. The methodology, underlying assumptions, and data sources used to arrive at the metrics disclosed in this section are therefore explained in the following.

Throughout the Group, standardized processes and data collection methods are applied in order to ensure high standards of data quality, consistency, and comparability. Information on the quality assurance of the metrics can be found in the ESRS 2 section under Data completeness, reliability, and quality.

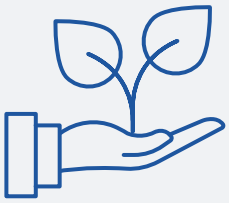
Metrics in the ESRS E1 — Climate change section	Significant assumptions, calculation methodologies, and limitations
Scope 1 GHG emissions	Scope 1 emissions are calculated by recording and consolidating, in a central database at Group level, all material fuel consumption figures (diesel/biodiesel, gasoline/biogasoline, heating oil, LPG, LNG, natural gas/biogas, CNG, propane, butane, and hydrogen) under the operational control of HOCHTIEF and its consolidated companies and obtaining the GHG emissions by applying emission factors from centrally provided official databases (GHG Protocol, Defra). In addition, in this category we are reporting for the first time in the reporting year on emissions generated by services in the area of contract mining. These were reported under 3.15 in the previous year.
Scope 2 GHG emissions (location-based)	Location-based Scope 2 emissions are calculated by recording and consolidating, in a central database at Group level, all consumption of purchased energy (electricity, district heat, and district cooling) under the operational control of HOCHTIEF and its consolidated companies and obtaining the GHG emissions by applying emission factors from centrally provided official databases (IEA).
Scope 2 GHG emissions (market-based)	Market-based Scope 2 emissions are calculated by recording and consolidating, in a central database at Group level, all consumption of purchased energy (electricity, district heat, and district cooling) under the operational control of HOCHTIEF and its consolidated companies. The emissions are calculated using the hierarchy of available emission factors. This hierarchy consists of the following levels, with level 1 representing the highest level and level 3 the lowest: Level 1 is market-/supplier-specific. HOCHTIEF Group consolidated companies can enter market-/supplier-specific emissions factors in the central database. These are then used to calculate market-based Scope 2 emissions. Where companies do not have any market-/supplier-specific emissions factors, level 2 residual mix emission factors (AIB) are used. These are likewise contained in the central database. Failing level 1 and level 2, location-based calculation is used as level 3. Green electricity is recorded and accounted for separately.
Scope 3 GHG emissions	The Scope 3 GHG emissions are calculated for categories that are material for HOCHTIEF: 3.1 Purchased goods and services, 3.2 Capital goods, 3.3 Fuel- and energy-related activities, 3.4 Upstream transportation and distribution, 3.5 Waste generated in operations, 3.6 Business travel, 3.7 Employee commuting, 3.11 Use of sold products, and 3.12 End-of-life treatment of sold products. For the target of climate neutrality by 2045, we also include category 3.15 Investments. Categories 3.8, 3.9, 3.10, 3.13, and 3.14 were included in the GHG emission inventory but determined in a materiality assessment to be non-relevant to our business activities.

Metrics in the ESRS E1—Climate change section	Significant assumptions, calculation methodologies, and limitations
Scope 3 GHG emissions—3.1 Purchased goods and services	This category consists of emissions from construction materials and subcontractor services. Quantities of construction materials used (asphalt, concrete, glass, wood, steel, cement, and aggregates) are recorded and consolidated in a central database and the GHG emissions obtained by applying centrally provided emission factors (Defra and HOCHTIEF in-house database of emission factors). For even greater detail in tracking GHG emissions for concrete and steel—which are particularly important to the construction industry—product-specific emission factors can be entered in the central database for use in the Scope 3.1 calculations in place of the global emission factor. In the reporting year, HOCHTIEF took further steps toward transparent reporting and now includes the following additional purchased goods for its own operational activities: machine spare part, tires, and oils/lubricants. For subcontractor services, emissions are assumed that correspond to the sum of Scope 1 and Scope 2 emissions.
Scope 3 GHG emissions—3.2 Capital goods	This category is used for reporting all upstream emissions from the production of capital goods purchased in the reporting year. Emissions were calculated using a spend-based emission factor (US EPA).
Scope 3 GHG emissions—3.3 Fuel and energy-related activities	Fuel and energy-related emissions are determined from recorded energy consumption and the related emission factors from the central database (Defra, IEA).
Scope 3 GHG emissions—3.4 Upstream transportation and distribution	Emissions from the transportation of goods purchased in the reporting year are calculated on the basis of the centrally recorded material quantities (asphalt, concrete, glass, timber, steel, cement, and aggregates). The emissions resulting from transportation to construction sites (Defra) were calculated at Group level for each construction material on the basis of average transportation distances and means of transportation (estimated by Procurement and the operational units)
Scope 3 GHG emissions—3.5 Waste generated in operations	Emissions from the disposal of non-hazardous and hazardous waste are calculated based on the amount of waste and a centrally provided emission factor (from a HOCHTIEF in-house database of emission factors).
Scope 3 GHG emissions—3.6 Business travel	This category comprises emissions from business travel in the reporting year. These are subdivided into three main types of travel (air, rental vehicle, and rail). The emissions are calculated by recording kilometers traveled in a central database and multiplying by emission factors (Defra). For greater precision, a distinction is also made between short-, medium-, and long-haul flights.
Scope 3 GHG emissions—3.7 Employee commuting	This category contains emissions from workforce commuting. Employee commuting emissions are estimated for each region. The emissions are based on regional commuting patterns and average commuting distances (from sources such as destatis). The effect of mobile working is also taken into account (by estimating the number of home working days). Headcounts are recorded centrally.
Scope 3 GHG emissions—3.11 Use of sold products	This category includes emissions generated by end-users during the operation phase of their completed buildings, for which we act as the contractor. The emissions are calculated from annual sales in construction to determine the total building area constructed in the reporting year. Energy consumption per square meter is used to calculate the amount of energy required for a 60-year building lifetime. Multiplying this amount of energy by the continuously diminishing energy grid emission factor gives emissions in the operation phase. These are reported for the reporting year.

Metrics in the ESRS E1—Climate change section	Significant assumptions, calculation methodologies, and limitations
Scope 3 GHG emissions—3.12 End-of-life treatment of sold products	This category covers emissions from the future end-of-life treatment of our built projects. Since all components of the buildings we construct must eventually be returned to the materials cycle, all material we use during the year is subjected to emission factors (Defra) that include the material-specific dismantling processes. It is assumed that the recycled/reused share will increase at the expense of landfilling.
Scope 3 GHG emissions—3.15 Investments	This category includes emissions from HOCHTIEF's capital expenditure. It includes the investment in toll road operator Abertis and in FlatironDragados, and Abertis and Thiess in the Sustainability Plan, respectively (Scopes 1 and 2 pro rata). Also included are all activities of companies without operational control, excluding joint operations without control, that are reported pro rata in Scopes 1, 2, and 3.
Greenhouse gas intensity	Greenhouse gas intensity is calculated as the ratio of GHG emissions to sales.
Biogenic emissions	This category contains emissions from the consumption of alternative fuels. Biogenic emissions are reported separately as they are obtained from regenerative resources and their emissions are considered part of the natural carbon cycle.
Total energy consumption	Total energy consumption comprises the sum of fossil, nuclear, and renewable energy sources. The metric is consolidated and reported at Group level.
Total energy consumption from fossil sources	Energy consumption from fossil sources is reported on a consolidated basis, based on the consumption of indirect energy (electricity and district heating) and direct energy (fuels). Direct energy consumption is made up of consumption of fossil fuels (diesel, gasoline, LPG, LNG, and natural gas) and the proportion of fossil energy in alternative and renewable fuels (biodiesel and biogasoline with their respective percentage fossil content). The data is recorded in kilowatt hours (kWh) and liters (l) and consolidated in megawatt-hours (MWh). Indirect energy consumption is made up of the consumption of electricity and district heating mainly from fossil sources. The data is largely collected by the operational units on the basis of primary data and then reported on a consolidated basis.
Energy consumption from nuclear sources	Energy consumption from nuclear sources (indirect energy consumption) is largely based on estimates. The total energy consumption recorded by the operational units is assigned a standardized proportion (source: EMBER Energy, 2024) of nuclear energy at Group level. Data is then reported on a consolidated basis.
Energy consumption from renewable sources	Energy consumption from renewable sources is reported on a consolidated basis, based on the consumption of indirect energy (electricity and district heating) and direct energy (fuels). In accordance with ESRS, a conservative approach was selected for tracking this metric. Direct energy consumption is made up of consumption of renewable fuels and the proportion of renewable energy in alternative and renewable fuels (biodiesel and biogasoline with their respective percentage biological content). Indirect energy consumption from renewable sources is made up of the consumption of electricity from renewable sources. The data is largely collected by the operational units on the basis of primary data and then reported on a consolidated basis.

Metrics in the ESRS E1 — Climate change section	Significant assumptions, calculation methodologies, and limitations
Energy generation from non-renewable sources	Energy generation from non-renewable sources is estimated on the basis of the fuel consumption (diesel and gasoline) recorded by the operational units. Based on experience in our projects, it is assumed that 8% of the diesel consumed and 4% of the gasoline consumed is used for energy generation. The total amount of energy generated is then reported on a consolidated basis.
Energy generation from renewable sources	Energy generation from renewable sources is estimated on the basis of the energy quantities recorded by operational units. The quantities are largely based on primary data but may also be estimated on the basis of installed capacity.
Energy intensity	Energy intensity is calculated as the ratio of the quantity of energy to sales.

In the 2024 reporting year, 1,320,491 t CO_2e contract mining fuel emissions at Thiess were accounted for under Scope 3.15 in line with the Australian NGER regulatory requirements for GHG reporting. These emissions are now fully accounted for under Scope 1 in the reporting year. This results in the following retroactively corrected values for 2024: Scope 1: 1,535,313 t CO_2e. The corrected figure for Scope 3.15 in the reporting year 2024 is 121,428 t CO_2e. This correction affects the following environmental metrics: energy consumption and energy mix, Scope 3 category 3.3 as well as air pollutant emissions.



ESRS E2
Pollution

This section contains disclosures on HOCHTIEF's material IROs related to pollution. In our double materiality assessment, we have identified three material impacts in this area (E2-NI1 to E2-NI3). These IROs are listed in the IRO table in the ESRS 2 section, together with disclosures on their location in the value chain, time horizon, and the nature of impacts. Disclosures on the directives and frameworks referred to in this section are also to be found in the ESRS 2 section.

Approach and policies

HOCHTIEF plays a major role as a link in the construction industry value chain with regard to preventing, limiting, and minimizing pollution. With our core sustainability-related focuses of collaboration, digitalization, and innovation, as well as with our projects and processes, we set key standards in environmental protection. For HOCHTIEF as an international group, preventing pollution is not just a vital responsibility but also a major element of our business activities. We recognize that while our activities hold great potential for sustainable solutions, they additionally pose challenges in terms of possible environmental impacts. In particular, the unintentional release of pollutants can pose environmental and health risks. That is why it is essential for environmental protection to be systematically enshrined in our processes.

The elements relating to pollution have close thematic links to content on other environmental and social topics in this report. Related topics such as climate change mitigation (see under "Climate change"), occupational safety, health, and environmental protection (see under "Own workforce" and "Workers in the value chain") are closely coordinated. This structure ensures comprehensive, 360-degree visibility over our initiatives for identifying, preventing, limiting, and minimizing pollution.

E2-1

With our position paper on pollution prevention, control, and minimization, we have sharpened the focus on preventing pollution as part of our sustainability strategy. The position paper is directed at improving our operational activities and processes along our entire value chain with regard to the various aspects of pollution. Our environmental management systems based on standards such as ISO 14001 are a core component of this, enabling us to effectively prevent the risk of pollution and environmental incidents. The position paper covers all business activities and takes account of the entire value chain (see also Policies adopted to manage material sustainability matters in the ESRS 2 section). It also covers all material impacts, risks, and opportunities relating to pollution, particularly the major topics of air, water, and soil pollution, as well as additional pollution aspects such as exposure to light, noise, vibration, and microplastics.

Responsibility for implementation of the position paper lies with the HOCHTIEF units, supported by our international working groups (primarily the Machinery and Equipment working group), which ensure that expertise and best practices are shared across the Group and made available to project teams. In order to track implementation, specific targets were formulated in the HOCHTIEF Sustainability Plan 2025. Progress in implementing the position paper is also monitored by regular tracking of relevant metrics throughout the Group (see also Risk management and internal controls over sustainability reporting in the ESRS 2 section). We prioritize close collaboration with our suppliers and business partners on environmentally friendly business activities to strengthen these aspects along the entire value chain.

Strategic areas of the position paper

Environmental awareness and training: Environmental incidents can be avoided and contained if all project participants are educated about environmentally conscious conduct from the outset, and if nonconformities and incidents are consistently addressed in order to implement effective improvements. Our operational business activities enshrine extensive practices to actively avoid or reduce pollution. Various professional development measures for employees align with our environmental, health, and occupational safety management activities. We aim to ensure that environmental awareness is promoted throughout our value chain in order to minimize potential sources of pollution. One key component of this action area is training on risk analysis, suitable responses, and emergency plans, which is established as standard at operational level in our projects—in some cases in collaboration with clients and subcontractors.

Effective communication: We work closely with our stakeholders to prevent, limit, and minimize environmental impacts in projects along our value chain. Effective communication on environmental protection plays a central role here, promoting shared environmental awareness, supporting environment-friendly activities in our own operations, and encouraging measures to protect the environment. This paves the way for joint solutions.

Operational efficiency: This is a significant action area for HOCHTIEF, among other factors because it plays a key part in reducing environmental impact and preventing potential pollution before it occurs. Improving operational processes, such as by increasing the use of eco-friendly construction materials and state-of-the-art machinery, enables us to systematically reduce the environmental impacts of our business activities. At the same time, these measures help mitigate the risk of unforeseen environmental incidents.

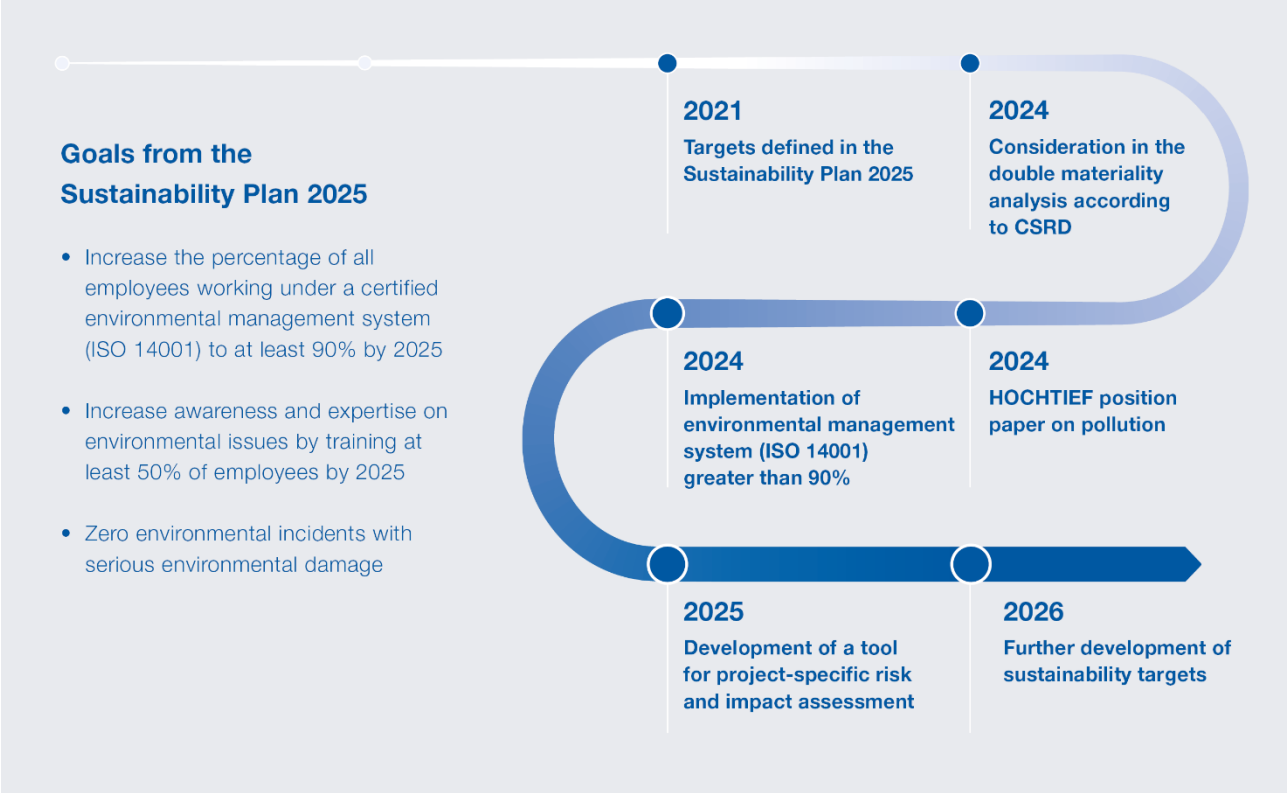
Innovation and best available technology (BAT): Further optimization of our business activities with regard to environmentally friendly operations necessitates improvements to existing processes and the implementation of innovative methods. Deploying BAT not only implements operational innovations in our business activities but also launches an ongoing innovation process that, in the long term, will serve to reduce pollution and minimize the environmental and health risks of our activities.

Sustainable alternatives: Offering and deploying sustainable, environmentally friendly alternatives—for example, with regard to construction methods, building materials, vehicles, machinery, and alternative fuels—advances the long-term transition to resource-efficient operational activities. HOCHTIEF is helping to drive this shift toward more eco-friendly ways of working through a range of initiatives. A particularly important document here is the Group-wide HOCHTIEF transition plan for climate change mitigation (Net Zero Roadmap), which lists a wide range of measures for the use of sustainable alternatives (see the ESRS E1 section).

Environmental management: An effective environmental management system embedded throughout the Group is of central importance to HOCHTIEF in enabling early identification, management, and continuous mitigation of environment-related risks. Environmental management systems of this kind establish clear responsibilities, structured processes, and transparent operational procedures that enable the binding integration of environmental considerations into everyday business activities. By applying recognized environmental management standards such as ISO 14001 across the Group, we ensure that environmental risks are systematically addressed, support the adoption of preventive measures, and drive continuous improvement processes.

Efficient and environmentally friendly processes, a high degree of environmental awareness, prevention of environmental incidents, and strong environmental, health, and safety management are key priorities for HOCHTIEF. We measure the progress of our initiatives against the targets contained in the HOCHTIEF Sustainability Plan 2025. In the reporting year, we made further progress in systematically addressing the thematic area of pollution in our sustainability strategy. As part of the ongoing further development of sustainability targets, we are analyzing the extent to which additional Group-wide targets can address specific aspects of pollution.

Milestones in the pollution prevention, minimization, and control strategy



Actions and targets

E2-2

The entire HOCHTIEF Group pursues a range of initiatives and activities to ensure the implementation of our strategy. Such approaches are geared to local circumstances (such as location, project type, client needs, and material requirements) and represent an important part of our commitment to environmental and employee protection. In most cases, the (building) permit for a project is obtained by the client in advance. Combined with the requisite official environmental impact assessments, this can result in extensive requirements to be complied with for the execution of a project. Overall, this matter also contributes to significantly reducing the probability of occurrence and the negative impact that could potentially result from our own operations.

Our negative impacts in terms of air pollution mainly relate to air pollutants from the combustion of fossil fuels in our operational activities. These include GHGs, non-GHGs, and particulates. The actions set out in the Climate change and Resource use and circular economy sections hence lead to reductions in these pollutants.

With the help of its operating companies, HOCHTIEF has developed a wide range of actions, each of which depends on the specific local conditions and project phases.

The most important actions currently being implemented are described below. They are executed by our operational units in the business activities of the HOCHTIEF Group. Due to their project-related nature, the actions presented do not have a clearly defined end date, but are continuously implemented in HOCHTIEF's regions of operation over the short-, medium- and long-term time horizons specified in the ESRS 2 section. The actions presented address the respective material impacts identified for the HOCHTIEF Group in relation to pollution. Responsibility for implementation lies with the HOCHTIEF units, and progress is tracked against the targets by monitoring, reporting, and control (further information in the ESRS 2 section).

Emission-reduced processes, machinery, and vehicles (E2-NI1)

As part of the Group-wide transition plan for climate change mitigation (Net Zero Roadmap) and accompanying initiatives, such as the Green Energy and Embodied Carbon initiatives, HOCHTIEF is taking targeted action along the entire value chain to systematically reduce the use of fossil fuels (and associated air pollutant emissions) at project level and across the Group. One key approach is the deployment of efficient, state-of-the-art vehicles and machinery with low fuel consumption and advanced powertrains. These measures make a significant contribution to reducing emissions and are described in detail in the ESRS E1 Climate change section. Further examples include:

- Use of state-of-the-art machinery with low energy consumption, such as (construction) machinery with the latest Stage V engines
- Switching to electrically powered vehicles and machinery
- Use of alternative, environmentally friendly fuels
- Use of low-emission technologies and long-lasting sustainable building materials
- Use of sustainable and/or certified materials (such as materials with the Blue Angel label; further information in the ESRS E5 section)
- Optimization of operational processes with regard to air pollutant emissions
- Improving delivery route efficiency and related logistics

Risk analysis and preventive maintenance to counteract environmental incidents (E2-NI2, E2-NI3)

HOCHTIEF implements various measures along the entire value chain to proactively avoid acute environmental incidents, the main potential cause of which are machinery leakage and/or spills. The focus here is on project-specific risk analysis as well as regular maintenance and inspection programs for machinery, equipment, and vehicles. In addition, occupational safety policies ensure that workers are trained in the responsible handling and proper disposal of potentially hazardous substances, thus also preventing environmental incidents.
Examples include:

- Regular maintenance and inspection programs for machinery and vehicles
- Strict monitoring of construction site activities: Regular inspections and checks of construction processes allow potential sources of pollution to be identified and eliminated at an early stage.
- Occupational safety training on handling potentially hazardous substances
- Policies on storage and disposal to ensure the proper handling and disposal of hazardous substances
- Emergency plans and response measures specifying clear procedures for the immediate containment and reporting of environmental incidents
- Introductory and regular training programs for subcontractors regarding environmental incidents
- Provision of environmental first aid kits on construction sites to quickly and professionally deal with environmental incidents such as leaks
- Optimizing site planning: Temporary facilities and machinery are positioned in a way that minimizes direct contact with the ground and water bodies. This minimizes the risk of environmental damage.

Incorporating sustainability criteria on environmental protection into tender and award processes (E2-NI1 to E2-NI3)

HOCHTIEF incorporates sustainability criteria on environmental protection into tender and award processes. In supplier and subcontractor selection, we attach utmost importance to environmentally friendly materials, resource-efficient production processes, and the use of low-emission technologies. Suppliers and subcontractors are selected on the basis of the HOCHTIEF Code of Conduct, which ensures responsible environmental and resource management. In this way, HOCHTIEF makes sure that along its entire value chain, sustainability is firmly established throughout the supply chain and environmental risks are systematically minimized. Examples of actions in accordance with the HOCHTIEF Code of Conduct:

- Mandatory supplier compliance with environmental standards
- Assessment of environmentally friendly materials, resource-efficient production processes, and low-emission technologies in tendering and award procedures
- Supplier training and education to support business partners in implementing environmental requirements

Use of innovative digital solutions (E2-NI1 to E2-NI3)

To optimize construction project design and execution—and thus minimize energy consumption and associated air pollutant emissions—we offer our clients innovative technologies such as digital twins and life cycle assessment. Digitally tracking operational processes makes it possible to simulate a project's entire life cycle so that potential inefficiencies at any phase of the project can be identified and eliminated at an early stage. This opens the way for precise, resource-efficient design, optimizing material and machinery use as well as reducing energy consumption and protecting the environment. It also minimizes the risk of unforeseen environmental incidents (for further information, please see the ESRS E5 and the Innovation and digital transformation sections).

Training programs and expert exchange (E2-NI1 to E2-NI3)

HOCHTIEF provides training and instruction programs on environmental protection. Training for HOCHTIEF employees meets the relevant statutory requirements within the respective regions of operation and communicates the environmental targets in our Group-wide Sustainability Plan. In this way, we integrate sustainability into all processes. We also provide various platforms for exchange among experts and continuing education in order to keep employees abreast of innovative new technologies, requirements, and best practices in environmental protection. Moreover, by means of professional exchanges, our working groups transfer specialist know-how and best practices. The aim is to prevent and contain pollution and to reduce it to the lowest possible level. Examples include:

- Provision of mandatory environmental instruction and training for all relevant employees
- Specialist workshops and sharing of best practices in working groups
- Regular further training on innovative technologies, regulatory developments, and industry-specific environmental standards
- Provision of practical guidelines and check lists for the implementation of environmentally friendly processes in projects

Environmental management standards and environmental management systems (E2-NI1 to E2-NI3)

We aim to continuously raise environmental awareness, both operationally and in collaboration with our business partners, in order to promote environmental protection throughout the value chain. To this end, HOCHTIEF deploys a structured environmental management system to systematically identify, assess, and minimize environmental risks in its operating activities. Our approach is based on the requirements of the internationally recognized ISO 14001 environmental management standard or on equivalent standards. We additionally use established processes, guidelines, and best practices as well as internal audits specifically tailored to HOCHTIEF's business activities. In this way, we work to manage environmental risks and take preventive action to avoid them. We also monitor compliance with legal and internal requirements at various levels.

A Group crisis hotline is likewise available so that severe environmental incidents can be reported quickly and directly to the Group. This reporting system enables immediate escalation and initiation of countermeasures to contain environmental risks, ensuring that potentially environmentally harmful situations are addressed without delay. In addition, through regular dialogue and awareness-raising measures, HOCHTIEF ensures that employees remain aware at all times and that environmental management measures are implemented effectively.

E2-3

The thematic area of environmental protection is an integral part of HOCHTIEF's Group-wide strategy. Accordingly, Group-wide environmental protection targets were included in the HOCHTIEF Sustainability Plan 2025. Those targets are presented in the following.

Target[1]: HOCHTIEF has set itself the target of preventing environmental incidents with severe environmental damage

Relation to IROs: E2-NI2, E2-NI3	**Base year:** n/a (progress tracked annually)	**Target year:** annually	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline: n/a	**Target:** 0	**Geographical boundaries:** worldwide
	Unit: absolute, total figure	**Value chain:** ○ upstream ● own activities ○ downstream	

Target-setting methodologies and assumptions:

Despite comprehensive risk management and the care applied by our teams, incidents involving environmental damage cannot be completely ruled out. HOCHTIEF classifies environmental damage into two main categories. The classification is explained in greater detail at the end of this section.

Our fundamental goal is to systematically avoid environmental incidents. Special focus is placed on severe, Category 1 incidents, as these harbor especially high environmental risk. Preventing such incidents is critical to promoting sustainable building practices as well as meeting regulatory and societal demands.

To monitor and control this target, all environmental incidents are recorded by the operating units directly in our reporting system. In addition, the HOCHTIEF crisis hotline ensures that the most critical environmental incidents (Category 1) are reported and dealt with immediately in accordance with our crisis information directive. Incidents are analyzed and processed, and action is taken as needed. All reports provide valuable information on high-risk situations and processes, from which any need for action can likewise be identified.

This choice of target underscores the high priority attached to environmental protection at HOCHTIEF and reflects our commitment to responsibly addressing the construction industry's environmental impacts. A conscious focus on preventing severe incidents not only helps ensure compliance with international environmental standards but also protects natural resources and safeguards the company's long-term environmental and economic sustainability.

Status and trend analysis:

As in the prior year, no Category 1 incidents were reported in the HOCHTIEF Group in the reporting year, according to the scope of consolidation underlying the Sustainability Plan 2025. We have thus achieved our target. There were also no Category 1 incidents in relation to the current scope of consolidation during the reporting year.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Target[1]: HOCHTIEF has set itself the target of increasing the percentage of total employees covered by environmental management system certification (ISO 14001) to at least 90% by 2025

Relation to IROs: E2-NI1 to E2-NI3	**Base year:** 2021	**Target year:** 2025	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline: 60.3%	**Target:** at least 90%	**Geographical boundaries:** worldwide

Value chain:
upstream own activities downstream

Target-setting methodologies and assumptions:

The target of increasing the percentage of total employees covered by environmental management system certification (ISO 14001) to at least 90% by 2025 is particularly important to us. ISO 14001 certification ensures that the company's processes are systematically geared toward environmental protection and are subject to continuous improvement. It provides the basis for action to minimize environmental impacts and promote sustainable practices. Employees working within an ISO 14001-certified system receive regular training and contribute to continuously improving environmental performance. They can take targeted action to reduce environmental impacts—for example, by using low-emission machinery and protecting soil and water bodies.

Increasing the proportion of employees working in accordance with a certified environmental management system makes sure that environmental protection is effectively integrated not just on a piecemeal basis, but in all parts of the company and at all sites. This fosters a culture of environmental protection across the board that ensures compliance with legal requirements, reduces HOCHTIEF's potential negative impacts, and contributes to the sustainability of the construction industry as a whole.

Status and trend analysis:

We achieved a level of 97% in the reporting year, according to the scope of consolidation underlying the Sustainability Plan 2025. This means we have significantly outperformed our target of at least 90%. In relation to the current scope of consolidation, we achieve a coverage of 98%.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Target[1]: HOCHTIEF has set itself the target of increasing awareness and knowledge regarding relevant environmental topics by training at least 50% of relevant employees by 2025

Relation to IROs: E2-NI1 to E2-NI3	**Base year:** 2024	**Target year:** 2025	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline: n/a	**Target:** at least 50%	**Geographical boundaries:** worldwide

Value chain:
○ upstream ● own activities ○ downstream

Target-setting methodologies and assumptions:

The target of increasing overall awareness and knowledge regarding environmental topics by training at least 50% of employees by 2025 is central to countering potential pollution.

Training enables employees to gain a better understanding of the environmental impact of their work. Increasing awareness and knowledge of the subject matter drives a positive cultural change within the company. This ensures that environmental protection is effectively implemented not just in theory but also in practice and across our business relationships.

Training more employees on environmental issues (see the end of this chapter for details) enables the entire organization to make more environmentally friendly decisions, from material selection to reducing emissions on construction sites. In this way, HOCHTIEF makes a decisive contribution to reducing pollution and promoting sustainable development along the construction industry value chain.

Status and trend analysis:

Extensive environmental training was provided in all operating units during the reporting year. Topics and target groups were defined in collaboration with the international training working group and environmental experts from the operating units. Of the 13,001 employees identified by the operating units as relevant according to the scope of consolidation underlying the Sustainability Plan 2025, 11,258 received environmental training, thus exceeding the 50% target with a training rate of 87%. In relation to the current scope of consolidation, we achieve a coverage of 85%.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

E2-4

In the double materiality assessment and our business activities, air, water, and soil pollution related to environmental incidents were identified as material matters in the reporting year. The resulting metrics for the reporting year are shown below.

Air pollution arises in our business activities through the operation of machinery and vehicles. The combustion of fuels (direct energy) mainly produces emissions of the air pollutants NO_x, SO_x, and PM_{10}. Although these emissions are below the reporting thresholds specified in Annex II of Regulation (EC) No 166/2006 (E-PRTR), we report them as company-specific metrics in view of their relevance to HOCHTIEF.

Water and soil contamination can arise in our business activities in connection with environmental incidents, such as accidental leaks from machinery that can result in emissions of BTEX aromatics into soil or water. In the case of the HOCHTIEF Group, these are likewise below the E-PRTR thresholds and are assessed as non-material, meaning that they are not reported as company-specific metrics.

Emissions of air pollutants[1, 3] from fuel combustion in the HOCHTIEF Group

	2025 (Reference: SP 2025)[2]	2025
Nitrogen oxide (NO_x) (t)	680	**5,084**
Sulfur dioxide (SO_x) (t)	59	**472**
Particulate matter (PM_{10}) (t)	10	**76**

[1] The emissions relate to fuel consumption presented in ESRS E1 – Energy consumption (Scope 1 and Scope 2).
[2] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[3] The significant difference in Scope 1-based air pollutant emissions between the Sustainability Plan 2025 and the current scope of consolidation is due to the change in accounting for GHG emissions in Scope 1 instead of Scope 3.15 as in the previous year.

Number of environmental incidents in the HOCHTIEF Group[1, 2, 3]

	2025 (Reference: SP 2025)[3]	2025
Category 1	0	**0**
Category 2	7	**7**

[1] The categories of environmental incidents are described in detail in the explanatory notes on the metrics at the end of this section.
[2] Minor, Category 3 environmental incidents are dealt with under the auspices of the relevant company and are not reported Group-wide. The figures in the table also include incidents that were only sanctioned with a warning.
[3] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Proportion of units in the HOCHTIEF Group certified in accordance with environmental management system standard DIN EN ISO 14001, relative to number of employees (%)

	2025 (Reference: SP 2025)[1]	2025
ISO 14001	97%	**98%**

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Number of employees[2] in the HOCHTIEF Group who have participated in environmental training (%)

	2025 (Reference: SP 2025)[1]	2025
Environmental training	87%	**85%**

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] In the 2025 reporting year, 13,981 employees were identified as the relevant target group (13,001 comparable to the Sustainability Plan 2025).

Notes on ESRS E2 metrics: Methodology and data sources

Transparent and verifiable data collection is critical to making informed judgments about the development of our strategy, actions, and targets in relation to our material impacts. The methodology, underlying assumptions, and data sources used to arrive at the metrics disclosed in this section are therefore explained in the following.

Throughout the Group, standardized processes and data collection methods are applied in order to ensure high standards of data quality, consistency, and comparability. All metrics in this section have undergone internal quality assurance, but have not been validated by another external body. Information on the quality assurance of the metrics can be found in the ESRS 2: General disclosures section under Data completeness, reliability, and quality. The operating companies apply the Group-wide data collection hierarchy, which prioritizes suitable primary data.

Metrics in the ESRS E2— Pollution section	Significant assumptions, calculation methodologies, and limitations
HOCHTIEF Group air pollutant emissions	In the context of our business activities and as the outcome of comprehensive analysis, emissions of the air pollutants NO_X, SO_X, and PM_{10} are material matters for HOCHTIEF in terms of air pollution. Calculated emissions of these air and soil pollutants at project level are below the reporting thresholds specified in Annex II of Regulation (EC) No 166/2006 (E-PRTR). We nevertheless report emissions of the air pollutants NO_X, SO_X, and PM_{10} voluntarily as an entity-specific metric.
Soil pollutant emissions in connection with environmental incidents in the HOCHTIEF Group	Emissions of BTEX aromatic soil contaminants associated with potential machinery leaks and fuel and oil spills in environmental incidents are a material matter in our operations. However, calculated emissions of these soil pollutants at project level are well below the reporting thresholds specified in Annex II of Regulation (EC) No 166/2006 (E-PRTR). For this reason, no metrics on soil pollutant emissions are presented in the reporting year.
Water pollutant emissions in connection with environmental incidents in the HOCHTIEF Group	Emissions of BTEX aromatic water contaminants associated with potential machinery leaks and fuel and oil spills in environmental incidents, and resulting discharges into water bodies, are a material matter in our operations. The potential BTEX emissions were identified and calculated in a project-specific assessment. The calculated emissions of these water pollutants at project level are well below the reporting thresholds specified in Annex II of Regulation (EC) No 166/2006 (E-PRTR). For this reason, no metrics on water pollutant emissions are presented in the reporting year.

Metrics in the ESRS E2—Pollution section	Significant assumptions, calculation methodologies, and limitations
Number of environmental incidents in the HOCHTIEF Group	Environmental incidents are classified into categories 1 and 2. Clear assignment of environmental incidents to these categories generally poses no problem. In certain instances, however, clear categorization can be challenging—if insufficient information is available on an incident, for example, or where multiple environmental matters are affected. In such cases, incidents are classified case by case based on the available information. Primary data on each incident is recorded and documented on a project-specific basis. The data is then reported on a consolidated basis at Group level. Category 1 and 2 environmental incidents: Category 1 environmental incidents (severe incidents): High societal and/or environmental impact with potentially irremediable long-term adverse consequences. Category 2 environmental incidents: Moderate societal and/or environmental impact (with damage lasting one to three months) that are fully remediable in the long term.
Proportion of units in the HOCHTIEF Group certified in accordance with environmental management system standard DIN EN ISO 14001	The operating HOCHTIEF units are each certified in accordance with DIN EN ISO 14001. This relates to the number of employees assigned to these units.
Proportion of employees in the HOCHTIEF Group who have participated in environmental training	The target groups for environmental training are determined by the operating units according to their employees' tasks (such as site management, work preparation, or equipment operator). The environmental training covers the topics relevant to the performance of the business activities. Most is related to the issues of air, soil, and water pollution either directly or indirectly (such as through reductions in fuel consumption). Quality assurance of data at all data collection levels and Group-wide data consolidation ensure that employees are recorded individually and that there is no double counting.

ESRS E3
Water and marine resources

This section contains disclosures on HOCHTIEF's material IROs related to water and marine resources. In our double materiality assessment, we have identified two material impacts (E3-PI1 and E3-NI1) and one material risk (E3-R1) in this area. These IROs are listed in the IRO table in the ESRS 2 section, together with disclosures on their location in the value chain, time horizon, and the nature of impacts. Disclosures on the Directives and Frameworks referred to in this section are also to be found in the ESRS 2 section.

Approach and policies

Protecting water as a resource is of paramount importance to the HOCHTIEF Group. Water is used in various construction and work processes in our projects, including dust suppression, earthworks, and drilling. While regulatory requirements and project approval procedures ensure that water conservation considerations are taken into account as a matter of principle, proactive measures can go further to secure water availability and promote the responsible use of this limited resource. This makes efficient and responsible water management part and parcel of our operational practices—including measures to save water and reduce consumption. It contributes substantially to minimizing environmental risks, raising resource efficiency, and further enhancing the Group's sustainability performance.

E3-1
Water protection through effective water management

HOCHTIEF has made the protection and sustainable use of water resources a thematic focus of its sustainability strategy. The HOCHTIEF position paper on water protection aims to further propagate efficient water management across the Group, reduce water consumption within and, where possible, beyond our business activities, and promote the reuse and recycling of water. This helps to minimize negative impacts on water bodies over the entire project life cycle. The document also addresses all material water-related impacts, risks, and opportunities for the HOCHTIEF Group.

Responsibility for implementation lies with the HOCHTIEF units. These are supported by our international Water working group, in which the Group's operating units share expertise and best practices and make them available to projects.

In order to track implementation, specific targets were formulated in the Sustainability Plan 2025. Progress in implementing the position paper is also monitored by regular tracking of relevant metrics throughout the Group (further information in the ESRS 2 section, Risk management and internal controls over sustainability reporting). Close collaboration with our suppliers and business partners on water-conserving business activities is important to us in order to promote these aspects along the entire value chain.

Strategic areas of the position paper

Water efficiency and minimizing water consumption: HOCHTIEF deploys innovative technologies to increase water efficiency and minimize water use. We additionally implement alternative methods, such as soil binders for dust suppression and efficient equipment with low water consumption. Applying such methods and preventive measures improves water efficiency, thus reducing water-related stresses and water use while minimizing potential disruptions to local water systems caused by large water withdrawals.

Promoting recycling and reuse: A key element of the position paper is the reprocessing and reuse of water. This includes the deployment of technologies such as filtration and clarification systems. Increased use of recirculating water systems promotes sustainable water management, improves water availability, and reduces water-related environmental pressures. Greater reuse can also significantly reduce both water withdrawals and returns.

Protecting nearby water bodies: Projects with a best-practice approach to sediment and erosion control and responsible discharge protect nearby water bodies. Controlled water return and sediment control measures protect local water systems and help maintain water quality while reducing potential disturbance from construction activities.

Data management and monitoring: A key focus is on systematic quantification and monitoring of all water consumption and water recycling activities in the HOCHTIEF Group. The metrics collected can be used to assess progress and pinpoint scope for improvement. Preventive measures and continuous data collection help optimize resource use and minimize potential risks relating to restricted access to water.

Awareness raising and collaboration: The position paper provides for training to promote the responsible use of water among employees, clients, and business partners. Local communities and stakeholders are also actively involved in water protection measures. This ensures public acceptance and strengthens cooperation for the joint development of sustainable solutions. The strategic involvement of business partners and communities helps safeguard water quality, supports efficient water management, and promotes sustainable practices.

Focus on water stress and water risks: The position paper relates both to our own business activities and—where it is possible to make improvements—to our value chain. With regard to its own activities, HOCHTIEF takes a project-specific approach to protecting water resources in the case of projects located in or near areas under water stress. All HOCHTIEF projects undergo risk assessment to determine whether they are located in such regions (further information in the Notes on ESRS E3 Metrics). Since 2021, a water protection plan has had to be prepared for all projects identified as subject to risk of this kind, as business operations in water stress areas can negatively impact local water availability. A corresponding target is included in the Sustainability Plan 2025, with progress reviewed on a continuous basis and once annually. This enables us to identify and effectively address potential impacts of our projects at strategic and operational level. Previously, we concentrated our data collection efforts on projects in water stress areas, as water stress poses the greatest water risk to our business activities. During the reporting period, we expanded our data collection on water consumption to include water risk areas, thus allowing us to consider aspects such as water quality, connectivity, and availability.

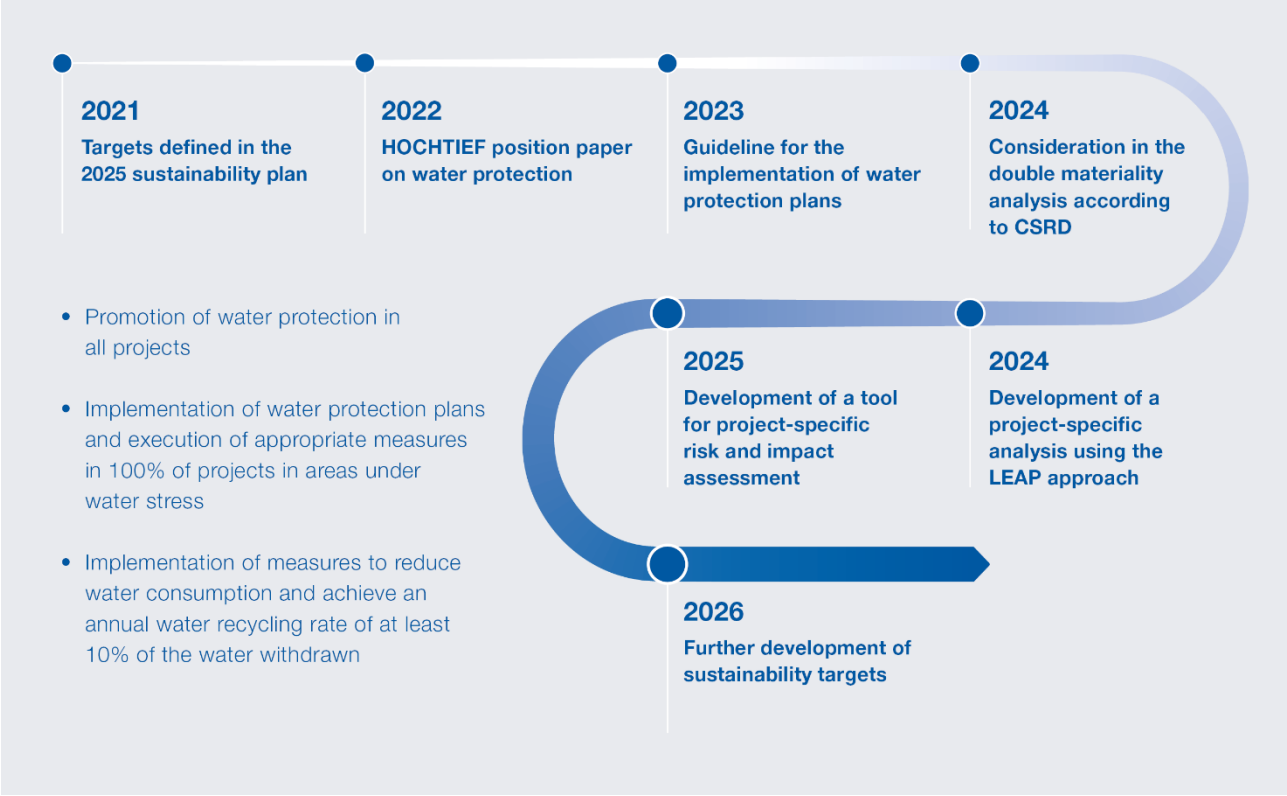
Water protection strategy at HOCHTIEF—project-based business model

HOCHTIEF's business model is project-based, which means that HOCHTIEF delivers individual projects for its clients in accordance with predefined requirements. Based on building permits and environmental impact assessments, the client's key requirements for a project are identified and contractually stipulated in the tender. When it comes to project execution, we mobilize plant, machinery, and resources for the finite duration of the project. Once a project has been completed, these resources are recalled for use in another. As no stationary, long-term physical assets are installed in this process, HOCHTIEF projects are not counted as permanent operating locations for the purposes of the ESRS. Accordingly, the site-specific disclosure requirements are not included in this section.

For HOCHTIEF, taking a project-specific approach to water conservation is of central importance. This safeguards local water availability, reduces potential negative ecosystem impacts, and supports the resource-conserving implementation of projects that are resilient for the long term. We made further progress in the reporting year with regard to approaching this thematic area from an even more pronounced project-specific perspective. In 2025, together with ACS, a Water Task Force was also established to work on topics such as a project-specific approach, developing a tool for calculating the water footprint and improving water-related risk assessment. The Task Force has also worked on harmonizing key water-related definitions and concepts, creating a common terminology framework as a basis for future water targets.

After developing a methodology for project-specific tracking of water-related impacts, risks, and opportunities in the prior year, HOCHTIEF collaborated with its international Water Task Force during the reporting year to design a tool based on the LEAP (Locate, Evaluate, Assess, and Prepare) methodology for Group-wide application hand in hand with the revision of the HOCHTIEF Sustainability Plan. This methodology allows all relevant matters in relation to water resources and their sustainable use to be recorded and managed on a project-specific basis. Developing this project-specific risk assessment as a Group-wide framework underscores our commitment to incorporating water protection measures in excess of minimum requirements into our projects in order to ensure sustainable use of water resources over the long term.

Milestones in the HOCHTIEF water protection strategy



Actions and targets

E3-2

We implement a wide range of measures across the Group to reduce water consumption and ensure efficient and responsible water management. In this connection, timely and close collaboration with our clients and business partners is important to us in order to integrate water-efficient solutions from the early stages of a project.

The most important actions currently being implemented by the operating units in the business activities of the HOCHTIEF Group are described below. Due to their project-related nature, the actions presented do not have a clearly defined end date, but are continuously implemented in HOCHTIEF's regions of operation over the short-, medium-, and long-term time horizons specified in the ESRS 2 section. The actions presented address all material impacts, risks, and opportunities identified for the HOCHTIEF Group in relation to water protection. Responsibility for implementation lies with the HOCHTIEF units, and progress is tracked against the targets by monitoring, reporting, and control (further information in the ESRS 2 section).

Project-related risk analyses (E3-PI1, E3-NI1, E3-R1)

Water stress is the most significant water risk for HOCHTIEF's business activities, as our water needs can directly affect water availability and local water shortages can raise the cost of a project. While the Group-wide target of the Sustainability Plan 2025, as with our position paper, was designed with this prioritization in mind and was reported in the past, we expanded the risk analysis and data collection in the reporting year to include a complete consideration of water risks.

Analysis and assessment of local water risk at project level enables us to identify and effectively address the impacts on our projects strategically, both within our own operations and in the downstream value chain. We review all HOCHTIEF projects to determine if they are in or near water-risk areas (further information in the Notes on ESRS E3 metrics). For affected projects that are located near or in water-stressed areas, our operating units prepare a tailored water protection plan based on a Group-wide guideline in accordance with the associated target in the Sustainability Plan 2025. This includes project-specific and tailored processes and strategies designed to minimize the impact of our business activities on the area in question. This likewise includes implementing best-practice management initiatives, ensuring compliance with water quality standards as well as monitoring discharge and drainage processes in various project phases. We regularly verify the effectiveness of the measures, identify scope for improvement, and implement any necessary corrective action. The aim is to ensure that as much as possible is done across the projects to protect water. Examples include:

- Water recycling and reuse—for example, through water recirculation systems
- Use of wastewater filter systems to safeguard water quality
- Sediment and erosion controls to prevent negative impacts on nearby water bodies
- Rainwater retention basins to minimize water withdrawal
- Use of soil binders or greenery in place of water for dust suppression on construction sites
- Low-moisture compaction

Minimizing water consumption (E3-PI1, E3-NI1, E3-R1)

HOCHTIEF takes various measures to reduce water withdrawals and discharges, and thus to significantly reduce overall water consumption, both in the upstream value chain and within our own operations. Notable among these are water conservation and water efficiency measures. A wide range of approaches are deployed here to ensure responsible use of water resources across all operational activities. Examples include:

- Monitoring and management systems for water consumption at sites and in projects, including the installation of water monitoring systems and precise, real-time control of water consumption.
- Increased use of rainwater collection systems
- Use of rainwater in operational activities, including for dust control, cleaning, and cooling
- Use of water-efficient sanitary and technical building services, together with internal guidelines to promote water-conserving processes
- Training and awareness measures for employees and subcontractors
- Compliance with construction site-related certification requirements, such as LEED, BREEAM, and DGNB
- Procurement of building materials based on sustainable production methods, such as lower water consumption, which can have a positive impact in the upstream value chain
- Inclusion of requirements in contracts with suppliers and subcontractors, including expectations for the provision of reliable water-related data

Water reuse and recycling (E3-PI1, E3-NI1, E3-R1)

Reusing and recycling water are essential in order to improve water efficiency in our business activities and in the upstream value chain. HOCHTIEF takes various measures to reuse and/or recycle water. These circular economy measures have particularly great potential for reducing water needs to the necessary minimum. A key element is the development of technical and organizational solutions to reuse process water in a closed cycle. Examples include:

- Use of (rainwater-based) closed recirculation systems
- Substitution of fresh water with reused construction water using techniques such as filtration and pH balancing
- Reuse of wastewater, as with the use of neutralized drilling water for compaction
- Installation of graywater systems and treatment systems that recycle water from showers, washbasins, or cleaning processes
- Use of water-efficient recycling systems in sanitary plumbing, including for toilet cisterns

E3-3

The thematic area of water is integral to HOCHTIEF's Group-wide strategy. Accordingly, Group-wide water-related targets were included in the HOCHTIEF Sustainability Plan 2025[1]. Those targets are presented in the following.

Target[1]: Implementation of water protection plans and execution of corresponding measures in 100% of the projects in water-stressed areas

Relation to IROs: E3-PI1, E3-NI1, E3-R1	**Base year:** 2021	**Target year:** continuous	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline: 0%	**Target:** 100%	**Geographical boundaries:** worldwide

Value chain:

○ upstream ● own activities ○ downstream

Target-setting methodologies and assumptions:	The target of implementing water protection plans in 100% of the projects in water-stressed areas is based on a structured analysis of water stress levels using the World Resources Institute (WRI) Aqueduct tool (details on data protection are provided at the end of this section). This data-driven approach ensures that all projects are assessed for water stress and that effective strategies for reducing water consumption and promoting water reuse are implemented throughout the various project phases.
Status and trend analysis:	In the reporting year, a water conservation plan was implemented in 148 out of 148 projects in water stress regions, corresponding to 100% target achievement (thresholds and details on data collection are presented in the explanatory notes at the end of this section). This is in line with the targets in the HOCHTIEF position paper and the scope of consolidation underlying the Sustainability Plan 2025. We plan to consistently sharpen our focus on this topic in the refinement of the HOCHTIEF Sustainability Plan. In the current scope of consolidation, we also achieved 100% coverage in the year under review (110 projects in regions of water stress, 110 of which had a water protection plan).

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Target[1]: Implementation of measures to reduce water consumption and achieve an annual water recycling/reuse rate of at least 10% of total water withdrawn

Relation to IROs: E3-P1, E3-N1, E3-R1	**Base year:** n/a	**Target year:** annually	**Progress measurement:** annually, Group-wide, and per operating unit
	Baseline: n/a	**Target:** At least 10%	**Geographical boundaries:** worldwide

Value chain:

○ upstream ● own activities ○ downstream

Target-setting methodologies and assumptions:	Our target is to reduce our water use and achieve an annual water recycling and reuse rate of at least 10% of total water withdrawals across the Group. (Details of data collection are provided at the end of this section).
Status and trend analysis:	According to the scope of consolidation underlying the Sustainability Plan 2025, we were able to achieve a recycling rate of 12% in the reporting year, thus achieving our target. In the four years of application of the HOCHTIEF Sustainability Plan 2025, we were even able to achieve an average recycling rate of 13%. In relation to the current scope of consolidation, we have achieved a recycling rate of 10%.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

E3-4

Water consumption

In the double materiality assessment and within the context of our business activities, water was identified as a material matter. The resulting metrics for the reporting year are shown below.

Total water consumption in the HOCHTIEF Group

	2025 (according to SP 2025)[1]	2025
Water withdrawal by source (m³)	**4,501,789**	**19,340,448**
Fresh surface water	110,153	426,104
Renewable groundwater	278,576	278,576
Non-renewable groundwater	1,371,427	3,542,308
Brackish surface water/seawater	318	11,253,660
Produced water	59,192	121,954
Third-party providers (grid, municipal supply)	2,621,520	3,657,243
Rainwater	60,603	60,603
Water discharge by destination (m³)	**2,495,220**	**1,607,300**
Fresh surface water	339,334	340,973
Groundwater	520,254	39,922
Brackish surface water/seawater	29,561	7,292
Third-party providers (grid, municipal supply)	1,606,071	1,219,113
Total water consumption (m³)[2]	**2,006,569**	**17,733,148**
Water intensity per net revenue (m³/EUR million)	55	464
Water recycling rate	12%	10%

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] Due to the consideration of contract mining activities, there is a significant increase in water consumption in the reporting year.

Recycled/reused water in the HOCHTIEF Group

	2025 (Reference: SP 2025)[1]	2025
Consumption of recycled fresh surface water (m³)	449,540	244,936
Consumption of reused fresh surface water (m³)	82,069	1,675,187
Brackish surface water/sea water recycled/reused (m³)	1,811	1,811
Total water recycled/reused (m³)	**533,420**	**1,921,935**

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Projects and related water consumption in the HOCHTIEF Group in areas at water risk and/or of high water stress

	2025 (Reference: SP 2025)[1]	2025
Number of projects in areas of high water stress[2,3]	148	**110**
thereof projects with corresponding water protection management action plan[2,3]	148	**110**
Coverage	100%	**100%**
Total water consumption in areas of high water stress (m³)	**640,745**	**1,686,243**
Total water consumption in areas at water risk (m³)	**29,395**	**121,371**

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] The metric includes projects that Group companies have classified on the basis of specific thresholds as projects in water-stressed areas. See also Notes on ESRS E3 metrics: Methodology and data sources.
[3] Projects in progress at the end of the reporting year

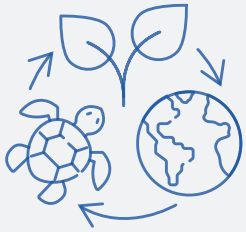
Notes on ESRS E3 metrics: Methodology and data sources

Transparent and verifiable data collection is critical to making informed judgments about the development of our strategy, actions, and targets in relation to our material impacts. The methodology, underlying assumptions, and data sources used to arrive at the metrics disclosed in this section are therefore explained in the following.

Throughout the Group, standardized processes and data collection methods are applied in order to ensure high standards of data quality, consistency, and comparability. All metrics in this section have undergone internal quality assurance, but have not been validated by another external body. Information on the quality assurance of the metrics can be found in the ESRS 2: General disclosures section under Data completeness, reliability, and quality. The operating companies apply the Group-wide data collection hierarchy, which prioritizes suitable primary data.

Metrics in the ESRS E3 section—Water and marine resources	Significant assumptions, calculation methodologies, and limitations
Water withdrawal by source	The metric represents the volume of water withdrawn by the Group in the reporting year, in cubic meters (m^3). The total volume of water withdrawn is shown, as well as the volume of water withdrawn from different water sources: fresh surface water (according to the Global Reporting Initiative (GRI)); renewable groundwater (GRI); non-renewable groundwater (GRI); seawater (GRI); produced water (GRI); third-party water (GRI); and rainwater (according to the Dow Jones Sustainability Index (DJSI)). The HOCHTIEF operating units use different methods to collect the data. The metric is largely based on primary data collected using delivery notes, receipts, and water meters. Where necessary—due to a lack of primary data, for instance, or on very small projects—estimates were made based on historical data or similar projects. The diverse nature of water catchments and global variations in water availability and quality limit the scope for a uniform data collection methodology for water quality and quantities. Differing regulatory requirements and limited availability of water quality and quantity data pose further challenges for uniform data collection. As a result, it is not possible for information on water quality and water availability to be presented separately.
Water discharge by destination	The metric represents the volume of water discharged by the Group in the reporting year, in cubic meters (m^3). The total volume of water discharged is shown, as well as water discharges by destination: fresh surface water (according to the Global Reporting Initiative (GRI)); groundwater (GRI); seawater (GRI); and third-party water (GRI). The operating HOCHTIEF units use different methods to collect the data. As it is hard for technical reasons to obtain water discharge data by direct measurement, the metric is largely based on estimates. These draw on empirical values from comparable projects as well as, in part, from representative sample measurements and comparable figures within the HOCHTIEF Group. Where primary data was available, such as from delivery notes or water meters, it was used as the priority source in data collection.
Total water consumption	Total water consumption is recorded in cubic meters (m^3) and is calculated at Group level as the difference between data on water withdrawal by source and water discharge by destination.
Recycled/reused water	Recycled/reused water is recorded as a volume figure in cubic meters (m^3) and includes the quantities of water recovered and reused. The metric is largely based on estimates, historical data, and sample measurements in similar projects. Estimates were generally made where primary data was not available or estimation was necessary.
Water recycling rate	The water recycling rate (in %) is based on Group-level calculation of reused and recycled water as a percentage of total water withdrawal. This metric is a key indicator of water recycling and water reuse efficiency in the Group and thus tracks our progress in sustainable water resource management.

Metrics in the ESRS E3 section— Water and marine resources	Significant assumptions, calculation methodologies, and limitations
Water intensity	Water intensity is the ratio of total water consumption to the Group's sales in the reporting year (in EUR million).
Number of projects in areas at water risk or of high water stress	HOCHTIEF analyzes its projects for their geographical location in or near areas at water risk and, separately, in accordance with the Sustainability Plan 2025, areas of high water stress. Primary data forms the basis for the information as to whether projects are located in or near areas at water risk or of high water stress. A clearly defined process has been established throughout the Group to check whether projects are located in areas at water risk or of high water stress. The responsibility for identifying these projects lies with the operating units, which determine the means and thresholds to be applied, taking into account the respective project-specific circumstances and project requirements. The latest version of the Aqueduct tool is used to identify areas at water risk or of high water stress, which enables accurate detection. If the water risk is high or very high according to the definition of the Aqueduct tool, the water consumption for this project is additionally recorded and reported under "Total water consumption in areas at water risk." If water stress is high or very high for a project according to the Aqueduct tool, the water use for that project is additionally recorded and reported under "Total water consumption in areas of high water stress." In addition, these projects in areas of water stress fall under the target of our Sustainability Plan 2025; their number is recorded and reported separately. The following thresholds are applied by the operating units in line with their business activities to identify projects in water-stressed areas: Turner: EUR 20 million; HOCHTIEF in Europe: EUR 5 million; CIMIC: no threshold. Accordingly, projects below these thresholds are not recorded and therefore not included in this metric.
Total water consumption in areas at water risk, including water-stressed areas	This records actual water consumption in full for all projects identified as being in areas of high or very high water stress. As with total water consumption, the water consumption is determined as the difference between water withdrawal and water discharge. Water consumption is estimated in the case of projects that are below the thresholds for project identification and are hence not individually tracked.



ESRS E4
Biodiversity and ecosystems

This section contains disclosures on HOCHTIEF's material IROs related to biodiversity and ecosystems. In our double materiality assessment, we have identified three impacts in this area (E4-NI1 to E4-NI3). These IROs are listed in the IRO table in the ESRS 2 section, together with disclosures on their location in the value chain, time horizon, and the nature of impacts. Disclosures on the directives and frameworks referred to in this section are also to be found in the ESRS 2 section.

Approach and policies

At HOCHTIEF, we are conscious of the importance of biodiversity and resilient ecosystems. As an international group, we believe it is our responsibility to protect, foster, and restore ecosystems and their biodiversity in the best possible way. We also recognize this as an opportunity to exert a positive influence. Together with our clients, we can implement sustainable solutions that balance environmental, social, and economic requirements in relation to biodiversity. At the same time, we work with our clients as a proactive partner to help them achieve their sustainability targets. We apply an integrated approach to protecting biodiversity, always aiming to take the entire project life cycle into consideration in order to provide life cycle-optimized solutions for all project phases and the value chain. In this way, we seek to assume responsibility over and above conventional tendering and permit procedures as well as over and above regulatory minimum requirements.

E4-1
Resilience analysis

As part of the double materiality assessment (DMA), HOCHTIEF assessed the resilience of the current business model with regard to biodiversity and ecosystems-related risks. To this end, a resilience analysis was performed as part of the DMA, taking into account both the scope of the DMA (see ESRS 2) and the time horizons used in the DMA (further information in the ESRS 2 section) for the assessment of potential transition, physical, and systemic risks. In the outcome, no material risks of this nature were identified for biodiversity and ecosystems, as potentially significant risks of this kind are already covered by the risks described in Climate change (ESRS E1). Further information on the resilience of our sustainability strategy is provided in the ESRS 2 section.

E4-2

Protecting and promoting biodiversity

The thematic area of biodiversity and ecosystems is an integral part of HOCHTIEF's Group-wide sustainability strategy and has been established throughout the Group with the publication of the HOCHTIEF position paper on biodiversity and ecosystems. This has the aim of promoting sustainable practices along our value chain in close collaboration with clients, suppliers, and business partners. As part of the planned further development of new sustainability targets, a stronger reference to applicable regulations, the EU Biodiversity Strategy for 2030, and the Kunming-Montreal Global Biodiversity Framework is to be integrated. In the course of this further development, the extent to which aspects relating to the prevention of deforestation could be taken into account in the future is also being examined. This helps to minimize negative impacts on biodiversity over the entire project life cycle. The position paper also addresses all material biodiversity and ecosystem-related impacts, risks, and opportunities for HOCHTIEF.

The position paper was drafted jointly by the HOCHTIEF units. These also implement the measures contained in it. They are supported by our international Biodiversity working group, in which the operating units of the HOCHTIEF Group share expertise and best practices and make them available to projects throughout the Group. In order to track implementation, specific targets were formulated in the Sustainability Plan 2025. Progress in implementing the position paper is also monitored by regular tracking of relevant additional metrics throughout the Group.

Strategic areas of the position paper

Raising awareness of responsible action with regard to biodiversity and the protection of ecosystems: A prime focus of our sustainability strategy is on training and raising awareness in relation to biodiversity for our employees and business partners, as Group-wide awareness and understanding of the topic are crucial to successful project-specific management of the impacts of our activities. This approach has been incorporated into our Sustainability Plan 2025 with corresponding targets and is continuously promoted.

Focus on projects in or near environmentally sensitive areas: The operational priority in the HOCHTIEF strategy is to protect highly endangered ecosystems. With regard to our own activities, this means taking a project-specific approach to protecting environmentally sensitive areas for projects in or near such areas. All HOCHTIEF projects undergo risk assessment to determine whether they are located in such regions. Since 2021, a biodiversity action plan (BAP) has had to be prepared for all projects identified as subject to risk of this kind, as business operations in or near environmentally sensitive areas can potentially have negative impacts on local ecosystems. The underlying action plans follow an approach that is in line with the requirements set out in the ESRS, taking into account, for example, interactions with affected communities and other relevant stakeholders. A corresponding target is included in the Sustainability Plan 2025, with progress reviewed on a continuous basis and once annually. The increasing use of automated risk assessments also allows new projects in or near environmentally sensitive areas to be identified. This enables us to pinpoint and effectively address potential impacts of our projects at strategic and operational level.

Development of a methodology for monitoring, measuring, and quantifying biodiversity across all projects: The development of a uniform methodology for monitoring, measuring, and quantifying biodiversity across the Group marks a key step toward effectively integrating the protection of biodiversity and ecosystems into our business processes. Using project-specific data collection, HOCHTIEF is laying the groundwork for more accurate assessment of environmental impacts throughout the project life cycle together with systematic management of risks and opportunities. This makes it possible to address project-related biodiversity impacts in a structured manner and offer custom-tailored solutions. The aim is to go beyond contractually agreed requirements by identifying measures that help protect biodiversity in quantifiable ways. (Further information on our progress during the reporting year can be found below in the “HOCHTIEF biodiversity strategy” and “Actions and targets” subsections.)

Integration of minimum requirements for the protection of biodiversity and ecosystems into HOCHTIEF’s internal contract award processes: We take account of the fact that statutory award procedures and client approval processes require thorough environmental impact assessments. By implementing environmental actions in excess of these in our internal award procedures, HOCHTIEF generates sustainable added value for itself and its clients. In close collaboration with our business partners, we aim to develop and implement even better solutions to protect biodiversity in the future. Irrespective of the project stage at which HOCHTIEF begins to contribute, we proactively offer our clients sustainable solutions that exceed their minimum contractual requirements in order to avoid negative impacts and deliver additional, positive impacts.

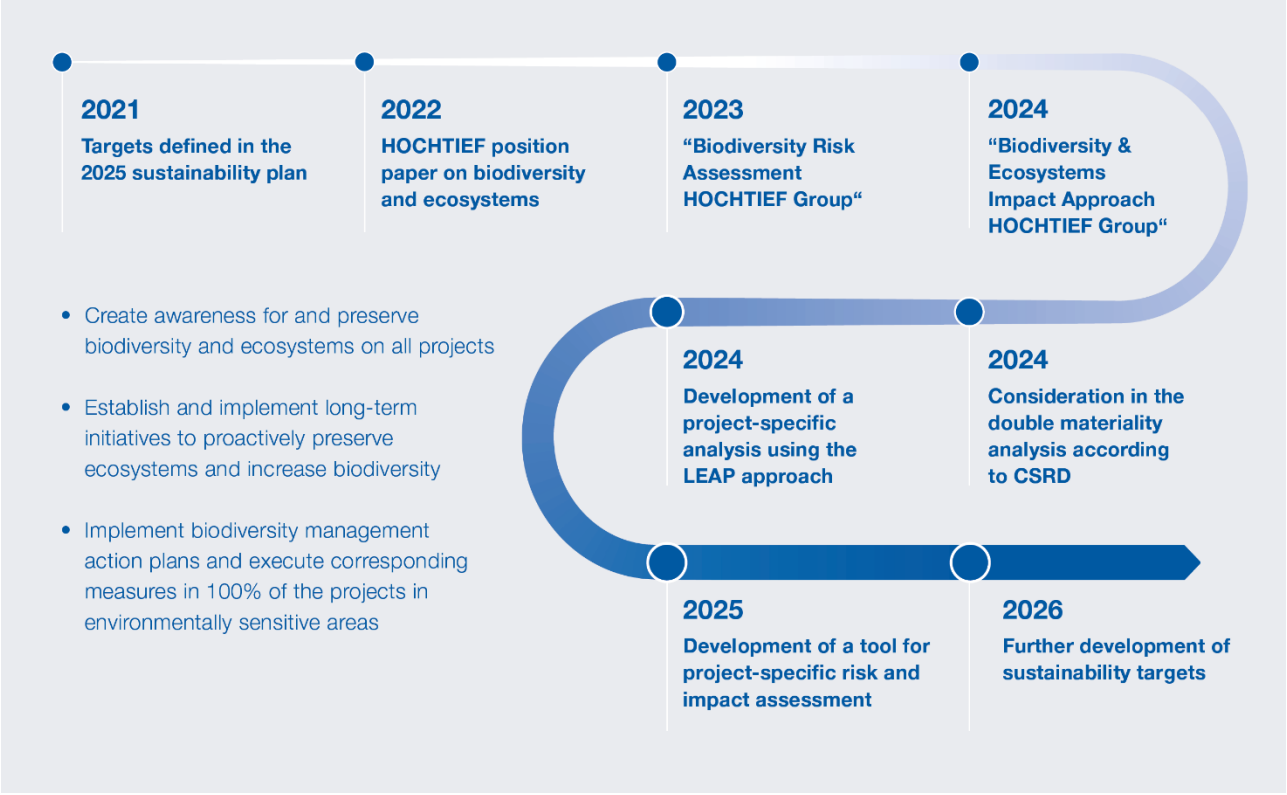
HOCHTIEF biodiversity strategy: Project-based business model

HOCHTIEF’s business model is project-based, which means that HOCHTIEF delivers individual projects for its clients in accordance with predefined requirements. Based on building permits and environmental impact assessments, the client’s key requirements for a project are identified and contractually stipulated in the tender. When it comes to project execution, we mobilize plant, machinery, and resources for the finite duration of the project. Once a project has been completed, these resources are recalled for use in another. As no stationary, long-term physical assets are installed in this process, HOCHTIEF projects are not counted as permanent operating locations for the purposes of the ESRS. Accordingly, the site-specific disclosure requirements are not included in this section. No site-specific disclosures are provided in relation to biodiversity and ecosystems. However, we record and report information on the number and area of projects located in or near environmentally sensitive areas.

For HOCHTIEF, taking a project-specific approach to protecting biodiversity is of central importance, especially for projects in environmentally sensitive areas. Biodiversity-related risks are assessed and addressed both at Group and at project level. We conduct risk assessments at project level in addition to the Group-wide biodiversity risk assessment (further information in the Notes on ESRS E4 metrics). This allows us to ensure that projects in or near environmentally sensitive areas require additional biodiversity measures to avoid or minimize any negative impacts of our business activities. Actions that go beyond the minimum statutory requirements can additionally contribute to protecting and promoting biodiversity. Further actions can also have positive effects within our business activities.

The HOCHTIEF Group has achieved continuous improvements in the protection of biological diversity and ecosystems in recent years. At the same time, we made further progress in the reporting year with regard to approaching this thematic area from an even more pronounced project-specific perspective. After developing a methodology for the project-specific tracking of impacts, risks, and opportunities relating to biodiversity in the prior year, HOCHTIEF designed a tool based on the LEAP (Locate, Evaluate, Assess, and Prepare) methodology in 2025 for Group-wide application as part of the further development of new sustainability targets. To this end and to address other strategic issues related to biodiversity, a Group-wide Biodiversity Task Force was also established in the reporting year. Within this framework, initial steps were also taken in the reporting year to harmonize common principles in the area of biodiversity. The task force developed a Group-wide biodiversity target framework approach that standardizes key terms and definitions, such as the application of the mitigation hierarchy. The results of this work serve as a technical basis for the further development of common standards and future targets at roup level. The task force is also working on the development of methods and plans on the topic of deforestation. We intend to present this progress—in conjunction with our targets from the HOCHTIEF Sustainability Plan 2025 and our HOCHTIEF position paper on biodiversity and ecosystems— under the relevant disclosure requirements.

Milestones in the HOCHTIEF biodiversity strategy



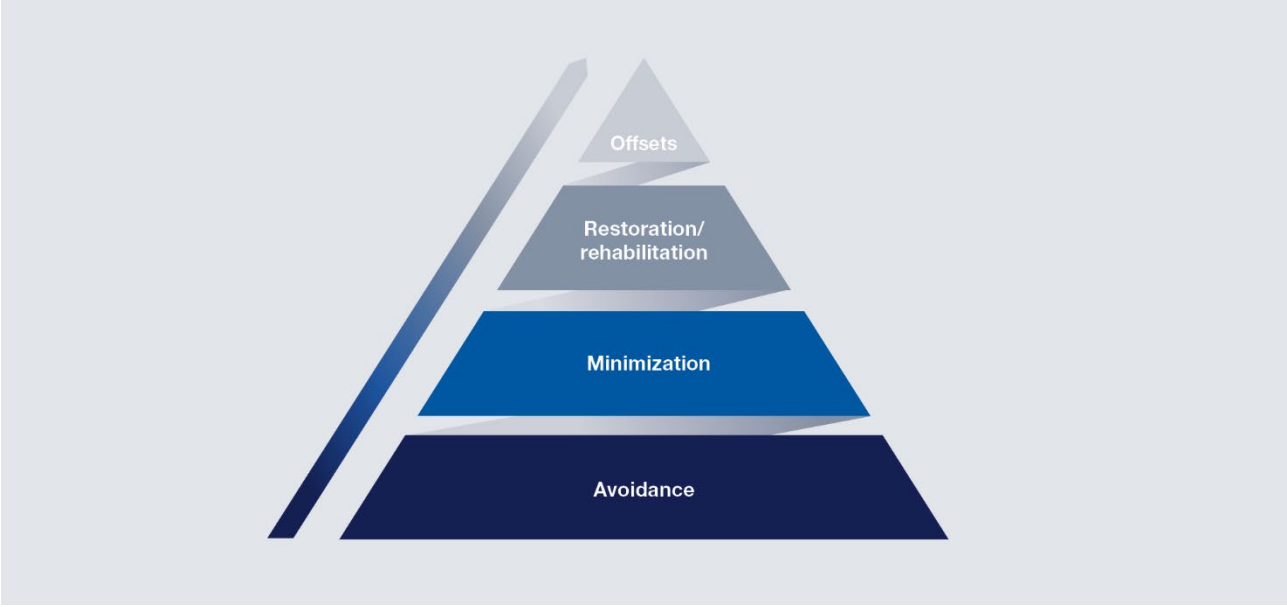
Actions and targets

E4-3

Biodiversity and ecosystems: Actions

HOCHTIEF follows an integrated approach to protecting biodiversity, based on the principles of the biodiversity mitigation hierarchy. The goal is to systematically avoid and minimize potential negative impacts on ecosystems throughout the entire project life cycle and, where possible, to restore affected areas. This approach helps in identifying biodiversity-related risks and site-specific needs at an early stage and in ensuring that suitable action is taken at all times. The most important actions are described below. They are implemented by the operating units in the business activities of the HOCHTIEF Group. Due to their project-related nature, the actions presented do not have a clearly defined end date, but are continuously implemented in HOCHTIEF's regions of operation over the short-, medium-, and long-term time horizons specified in the ESRS 2 section for the company's own operational activities. The actions presented address all material impacts, risks, and opportunities identified for the HOCHTIEF Group in relation to biodiversity and ecosystems. Responsibility for implementation lies with the HOCHTIEF units and progress is tracked against the targets by monitoring, reporting, and control (further information in the ESRS 2 section). In this connection, timely and close collaboration with our clients and business partners is important to us in order to integrate solutions for biodiversity from the early stages of a project.

HOCHTIEF biodiversity mitigation hierarchy



Creation of awareness for the protection of biodiversity and ecosystems (E4-NI1 to E4-NI3)

HOCHTIEF aims to raise awareness of biodiversity and ecosystems among all parties to projects in order to further reduce the impact of projects on nature. To this end, we develop guidelines and best-practice examples in order to take biodiversity-related criteria into account in the design, execution, and operation phases. This includes using nature-friendly construction methods, protecting sensitive ecosystems during construction, and restoring affected areas following project completion. With these measures, we also help instill an appreciation of nature conservation among our business partners. This additionally contributes to enhancing environmental responsibility in the construction industry and to reducing the negative impact of our activities. Examples include:

- Regular dialogue with relevant stakeholders to help promote sustainable land-use practices
- Cooperation with academic institutions (such as HOCHTIEF's collaboration with Münster University of Applied Sciences, Germany, for the further establishment and promotion of biodiversity on HOCHTIEF projects)
- Inclusion of biodiversity-relevant criteria in contractual frameworks to enable early intervention
- Avoiding deforestation through the use of certified timber (for example, with FSC certification) from sustainably managed forests.

Project-specific biodiversity action plans (E4-NI1 to E4-NI3)

Project-based assessment of our business activities in or near environmentally sensitive areas enables us, at both strategic and operational level, to identify potential impacts at an early stage and to effectively manage them. This is why project-related assessments with regard to the specific location of projects in or near environmentally sensitive areas have been made mandatory throughout the Group. Implementing these biodiversity action plans—in addition to the Group-wide biodiversity risk assessment—will enable HOCHTIEF companies to respond to individual needs surrounding each project and provide comprehensive protection for environmentally sensitive areas. Biodiversity action plans provide the necessary framework to avoid and manage in the best possible fashion the impacts and risks identified.

Here, too, we recognize that the final decision on implementing measures as well as their funding lies with the client. We can proactively propose sustainable solutions to our business partners—especially if we are involved from early on in the design phase.

Biodiversity action plans include—among others—the following elements:

- **Project type and location**: Specification of the type of project and its proximity to areas of conservation value
- **Ecosystem types**: Assessment of terrestrial and aquatic ecosystems, including endangered species
- **Stakeholder engagement**: Collaboration with key stakeholders, such as local communities, public authorities, and NGOs
- **Mitigation measures**: Specific action to mitigate negative impacts, such as the establishment of wildlife corridors, avoiding deforestation, and the use of sustainable materials
- **Biodiversity compensation measures** to reduce and offset potential negative impacts of our business activities on biodiversity, such as renaturation, reafforestation, or ecological compensation areas; in most cases, these form part of the project contract. In some instances, we also initiate additional voluntary compensation measures.
- **KPIs**: Definition of specific indicators to monitor the action taken, such as hectares of rehabilitated land, quantity of resources saved, or carbon reduction achieved.

Below, a number of key measures are presented that feature in BAP best practices applied across the various project phases: These make it possible to identify potential environmental risks and, in coordination with the client, to take targeted action for avoidance, minimization, or compensation.

Design and planning phase:
- Establishment of ecological compensation areas
- Protection programs for protected species
- Sustainable procurement

Execution phase:
- Conservation of flora and fauna
- Flood protection programs
- Prevention plans against the introduction of invasive species

Operating phase:
- Sustainable management of neighboring habitats
- Tracking of biodiversity in the project operating phase
- Project-specific tracking of impacts on biodiversity and ecosystems

Restoration actions (E4-NI1, E4-NI3)

In the course of our construction activities, restoration actions in respect of the changes to land caused by a project are often part of the contractually agreed services. The client determines the scope and type of these restoration actions, taking into account the regional regulations. In addition, our activities in the services business provided by Thiess should also be considered here. In this area, restoration actions at the end of a project are increasingly requested by clients and are also offered as a separate service by Thiess. Since 2007, Thiess has restored over 11,000 hectares in 16 different projects. These restoration actions are intended to minimize land use changes, particularly in the contract mining business. We do not currently record the total area covered by restoration actions across all business activities, but we are pursuing such an approach in the context of a more project-specific course for the future.

E4-4

Biodiversity and ecosystems: Targets[1]

The thematic area of biodiversity and ecosystems is an integral part of HOCHTIEF's Group-wide strategy. Accordingly, Group-wide targets were included for this area in the HOCHTIEF Sustainability Plan 2025. Those targets are presented in the following.

Target[2]: Creation of awareness for the preservation of biodiversity and ecosystems in all projects

Relation to IROs: E4-NI1 to E4-NI3	**Base year:** n/a	**Target year:** continuous	**Progress measurement:** n/a
	Baseline: n/a	**Target:** n/a	**Geographical boundaries:** worldwide
	Unit: qualitative	**Value chain:** ○ upstream ● own activities ○ downstream	

Target-setting methodologies and assumptions:	Environmental and biodiversity experts are involved in projects so that ecological matters are considered from the outset in order to develop specific conservation strategies. This is how we track the effectiveness of this target. Biodiversity conservation is likewise promoted in specially developed training for employees in order to provide in-depth knowledge and the necessary awareness of biodiversity issues at all project stages. An international HOCHTIEF working group coordinates these efforts, shares best practices, and continually develops solutions to minimize impacts on nature. This targeted action creates a sound basis for the long-term protection of biodiversity and promotes sustainable practices in the construction industry.
Status and trend analysis:	HOCHTIEF has published a plan entitled "Biodiversity and Ecosystems Impacts Approach — HOCHTIEF Group" for fine-tuning our materiality assessment. In-house experts provided training on effective implementation of the action planning process. Our project managers work closely with clients and the authorities, assisted by experts who are able to prepare ecological reports and species conservation projects to track the entire construction process.

[1] The target is not based on environmental thresholds, as these are not uniformly applicable to HOCHTIEF's project-based business model at present.
[2] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Target[1]: Implementation of biodiversity action plans in 100% of projects in environmentally sensitive areas

Relation to IROs: E4-NI1 to E4-NI3

Base year: n/a

Target year: annually

Progress measurement: quarterly, Group-wide, and per operating unit

Baseline: n/a

Target: 100%

Geographical boundaries: worldwide

Value chain:

○ upstream ● own activities ○ downstream

Target-setting methodologies and assumptions:

We aim to prepare and implement biodiversity and ecosystem management action plans in all projects in or near environmentally sensitive areas. These plans are based on the HOCHTIEF mitigation hierarchy, with the aim of avoiding and offsetting negative impacts on biodiversity and ecosystems in our projects and undertaking restoration measures. The target marks a key step for HOCHTIEF in minimizing the impact of our business activities on habitats of conservation value and for us to actively contribute to conserving biodiversity.

These plans set out specific actions to prevent or minimize negative impacts on flora and fauna. Implementation is based on a detailed environmental assessment that takes into account the ecological characteristics and challenges of the area concerned. This includes identifying species and habitats of conservation value and devising conservation strategies that are closely coordinated with local and international nature conservation frameworks.

Key elements of the plans comprise preventing habitat loss, promoting ecosystem restoration, integrating measures to protect endangered species, and continuously monitoring the environmental impact of construction activities.

Status and trend analysis:

According to the scope of consolidation underlying the Sustainability Plan 2025, In the reporting year, biodiversity action plans were implemented with corresponding measures in 61 out of a total of 61 projects in or near environmentally sensitive areas (please see the definition at the end of this section), corresponding to 100% target achievement. In relation to the current scope of consolidation, we also achieved 100% coverage in the reporting year (32 projects in or near sensitive natural areas, 32 of which have biodiversity action plans).

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Target[1]: Establishment and implementation of long-term initiatives to proactively preserve ecosystems and increase biodiversity

Relation to IROs: E4-NI1 to E4-NI3	**Base year:** n/a	**Target year:** continuous	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline: n/a	**Target:** n/a	**Geographical boundaries:** worldwide
	Unit: qualitative	**Value chain:** ○ upstream ● own activities ○ downstream	

Target-setting methodologies and assumptions:

The target is of crucial importance to HOCHTIEF as it sharpens the focus on the sustainable use and development of natural resources. This includes proactively designing projects to respect environmental qualities as well as minimize the impact on flora and fauna. It also involves taking targeted action to conserve existing biodiversity.

In our project activities, we promote environmentally sustainable practices such as creating green spaces, restoring land, and protecting habitats of particular importance to local flora and fauna. Our aim is to minimize the negative impacts of our business activities while making a positive contribution to the preservation of natural habitats.

Status and trend analysis:

In addition to project-specific measures, we also aim to promote long-term activities. These were refined in the reporting year, including in collaboration with universities, and adopted as best practice by the Group-wide working group on biodiversity.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

E4-5

Biodiversity and ecosystems

In the double materiality assessment as well as in the context of our business activities, thematic areas were identified as material matters for biodiversity in the reporting year. The resulting metrics for the reporting year are shown below.

HOCHTIEF projects in or near environmentally sensitive areas

	2025 (Reference: SP 2025)[2]	2025
Number of projects that are in and near environmentally sensitive areas[1]	61	**32**
thereof projects with biodiversity action plan	61	**32**
Coverage	100%	**100%**
Total area of projects that are in and near environmentally sensitive areas (ha)[3]	790	**857**

[1] Projects in progress at the end of the reporting year
[2] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[3] The area figure relates to the entire area of the projects included and not just the area within environmentally sensitive areas.

HOCHTIEF projects with direct or indirect responsibility for land-use change

HOCHTIEF delivers projects for clients worldwide. The client makes the decision to execute a project and generally obtains the official permission for the construction work and hence also the land-use change. This means we have only indirect responsibility in such instances. In a small number of cases, we make the decision to execute a project, which then gives us direct responsibility for land-use change.

	2025 (Reference: SP 2025)[1]	2025
Land-use changes as part of execution of projects for clients (indirect responsibility) (ha)	1261	**1294**
Land-use changes as part of execution of own projects (direct responsibility) (ha)	1	**1**
Total land-use change (ha)	1,262	**1,295**

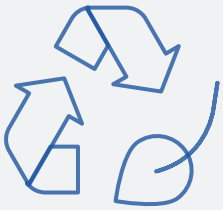
[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Notes on ESRS E4 metrics: Methodology and data sources

Transparent and verifiable data collection is critical to making informed judgments about the development of our strategy, actions, and targets in relation to our material impacts. The methodology, underlying assumptions, and data sources used to arrive at the metrics disclosed in this section are therefore explained in the following.

Throughout the Group, standardized processes and data collection methods are applied in order to ensure high standards of data quality, consistency, and comparability. All metrics in this section have undergone internal quality assurance, but have not been validated by another external body. Information on the quality assurance of the metrics can be found in the ESRS 2 section under Data completeness, reliability, and quality. The operating companies apply the Group-wide data collection hierarchy, which prioritizes suitable primary data.

Metrics in the ESRS E4—Biodiversity and ecosystems section	Significant assumptions, calculation methodologies, and limitations
Projects in or near environmentally sensitive areas	This metric records the number of projects located in or near environmentally sensitive areas. Including key biodiversity sensitive areas, it covers projects that may have a negative impact on such areas and their fauna and flora species due to the geographical location, scope, and scale of the activities involved. This also applies to projects near environmentally sensitive areas. A project is considered to be near environmentally sensitive areas if the area concerned or animal and plant species within the area could be negatively impacted by the siting, scope, or size of the project. The project area that is located in or near environmentally sensitive areas is based on the total area of the projects and not just the part that is within an environmentally sensitive area. Responsibility for identifying such projects lies with the operating units. The above-mentioned project-specific matters must be assessed on a case-by-case basis, together with relevant statutory provisions and nature conservation lists. Environmentally sensitive areas are identified on the basis of national and international frameworks and nature conservation lists. Under ESRS, these include the following reference sources: Protected Planet, IUCN Red List, BirdLife International, UNESCO World Heritage Sites, Natura 2000 protected areas, and other national legislation. The metric is based on primary data collected by the operating units and consolidated and reported at Group level.
Land-use change	The number of projects delivered by HOCHTIEF with direct responsibility for land-use change has high data quality as detailed information is available on land-use change, which is recorded and documented on a project-specific basis. In the case of land-use change for which HOCHTIEF is indirectly responsible—in projects executed on behalf of clients—the data is based on estimates. These estimates can vary by project type and are frequently made according to whether the land-use change is classified as greenfield or brownfield (this is determined by the client). Greenfield projects develop new land, while brownfield projects repurpose or rehabilitate existing land. All business activities in the reporting year are covered, including special projects such as those in the energy sector. The use of empirical values or information drawn from comparable projects ensures that estimates constitute as realistic and consistent a basis for reporting as possible.



ESRS E5
Resource use and circular economy

This section contains disclosures on HOCHTIEF's material IROs related to resource use and circular economy. In our double materiality assessment, we have identified three impacts (E5-PI1 and E5-NI1 to E5-NI2) and two opportunities (E5-O1 and E5-O2) in this area. These IROs are listed in the IRO table in the ESRS 2 section, together with disclosures on their location in the value chain, time horizon, and the nature of impacts. Disclosures on the directives and frameworks referred to in this section are also to be found in the ESRS 2 section.

Approach and policies

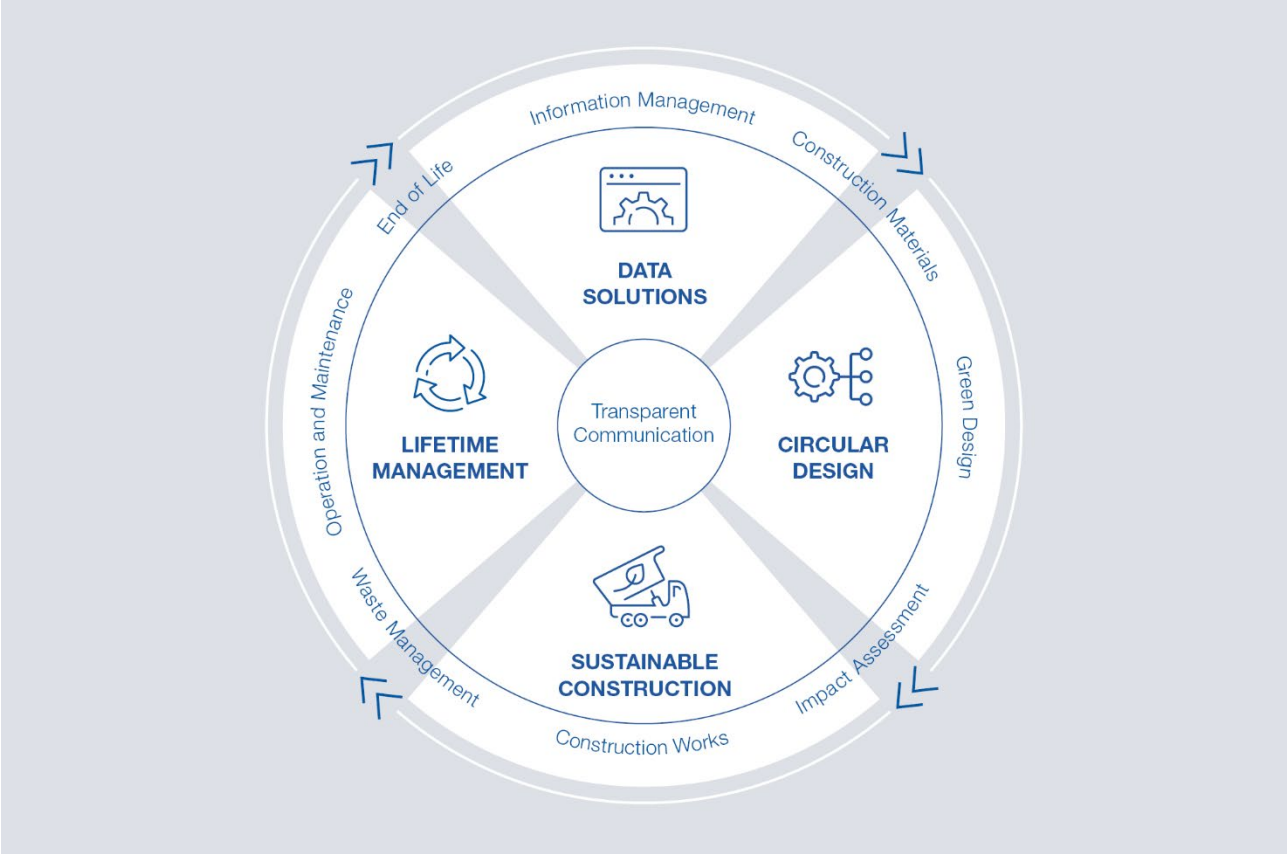
At HOCHTIEF, the circular economy is a key part of the sustainability strategy and our contribution to the transformation toward a resource-efficient economy. As an international provider of infrastructure solutions, we see it as our responsibility, and as an opportunity, to develop innovative solutions that close the material loop, minimize and avoid waste, and optimize the life cycle of our projects. HOCHTIEF is committed to transitioning to fully circular business practices. The ability to offer and deliver circular economy solutions is increasingly becoming a key competitive advantage and paves the way for long-term business success. We believe that this transition will only succeed through close collaboration with our stakeholders. This makes it possible to build incentives into the contract award process that have a long-term impact on the entire value chain and are beneficial in both environmental and economic terms for all involved.

E5-1
Circular economy and responsible management of resources

Given the substantial resource needs and waste volumes that arise in our business activities, resource efficiency and the circular economy are key elements of HOCHTIEF's sustainability strategy. The position paper on circular economy and resource use has the objectives of increasing resource efficiency, reducing dependence on primary resources, raising the proportion of secondary materials, and promoting project life cycle assessments to pave the way for a circular economy across the entire HOCHTIEF Group and in all regions where it operates by 2045. A key element of this is an efficient waste management system based on the waste hierarchy. The document also addresses all material resource- and circular economy-related impacts, risks, and opportunities for the HOCHTIEF Group.

Responsibility for implementation lies with the HOCHTIEF units, supported by our international working groups, notably those on the circular economy, waste, and (construction) materials. In order to track implementation, specific targets were formulated in the Sustainability Plan 2025. Progress in implementing the position paper is also monitored by regular tracking of relevant metrics throughout the Group (further information under Risk management and internal controls over sustainability reporting in the ESRS 2 section). We prioritize collaboration with our stakeholders, and in particular suppliers and clients, on resource-efficient business activities in order to strengthen these aspects along the entire value chain.

Strategic areas of the position paper



Information management: In our digitalization activities, we integrate various measures for the transparent digital tracking of materials, suppliers, and deliverables in our business operations. A key element of our information management comprises project life cycle assessments (LCAs). These are essential to the circular economy. They enable us to increase resource efficiency through the entire project life cycle. Circular solutions not only add value environmentally but also permanently reduce costs and continuously improve material and resource use across the HOCHTIEF portfolio.

(Construction) materials: Construction materials and related value chains are central to transitioning to a circular economy and decarbonizing our business activities (further information in the Climate change section). Our initiatives include, among others, the use of sustainable materials, recycling and reusing existing building fabric (in our own business activities or as a purchased service), and extending project longevity to minimize primary resource consumption. Using sustainable and certified construction materials and promoting recycling reduces resource use and minimizes GHG emissions. Circular solutions also create opportunities to reduce costs and maximize resource efficiency.

Circular design: Involving HOCHTIEF early on—ideally right from the project design stage—opens the way for significant improvements in resource efficiency and the sustainable use of (renewable) resources to be made for the project's entire lifetime. Circular design solutions make for efficient resource use as well as for sustainable and sparing utilization of materials. In this way, we also minimize our need for raw material inputs—especially from non-renewable sources. Circular solutions enabling disassembly into separate material fractions additionally present an opportunity to optimize resource use.

Impact assessment: In order to appraise our business activities with a view to circularity, we need to refine existing methods and implement best practices for impact assessment. Impact assessments along our business processes and value chain allow us to identify and assess impacts on resource use and availability and take them into account in our business decision making. This helps improve resource efficiency and enhances long-term project performance and sustainability. In this way, we can lay the foundations of more resilient business models with improved operational efficiency and long-term competitive advantages for HOCHTIEF.

Construction works: We also continue to systematically incorporate circular practices in the operational phase of our business activities. We do this by means such as employee training and proactively offering circular solutions to clients. Sustainable construction methods and efficient deployment of construction machinery play a key role here, as these have a substantial impact on the way resources are used on our construction sites. One key source of leverage consists in coordinating with our clients from an early stage to incorporate sustainable solutions right from the design phase. These measures help not only in cutting down on material use but also in reducing greenhouse gas emissions.

Waste management: Pending the successful transition to a circular business model, it is vital to implement thorough, transparent waste management practices. These promote resource efficiency, protect the environment, and widen the scope for using secondary raw materials. Key measures include training and improvements in waste separation to reduce waste volumes and fully leverage the potential for recycling. Separating waste into material fractions also paves the way for project-specific cost savings by, for example, reusing or reselling recyclable waste.

Operation and maintenance: By providing circular and innovative solutions—especially for the operating phase of a project—HOCHTIEF can significantly simplify maintenance and increase project longevity. Notably in PPP projects, continuous monitoring with the aid of AI solutions and specialized sensors alongside preventive maintenance detects material fatigue and potential faults at an early stage and ensures long-term operability. By using recyclable components and reusable materials, we close the loop as far as possible and enhance sustainability.

End of life: End-of-life solutions such as building passports, material passports, and digital twins are an essential part of the envisioned end-to-end, circular approach across all projects. They provide transparency about the materials used, enable closed material cycles, and thus aid the transition to a circular economy. Systematically planning the end-of-life process, supplemented by life cycle assessments, makes it possible to optimize resource use and significantly reduce waste volumes. Future waste volumes can be significantly reduced by factoring in recyclability and recovery potential right from the design phase. Circular approaches to material reuse and recycling also have financial benefits—for instance, in terms of lower procurement and waste management costs.

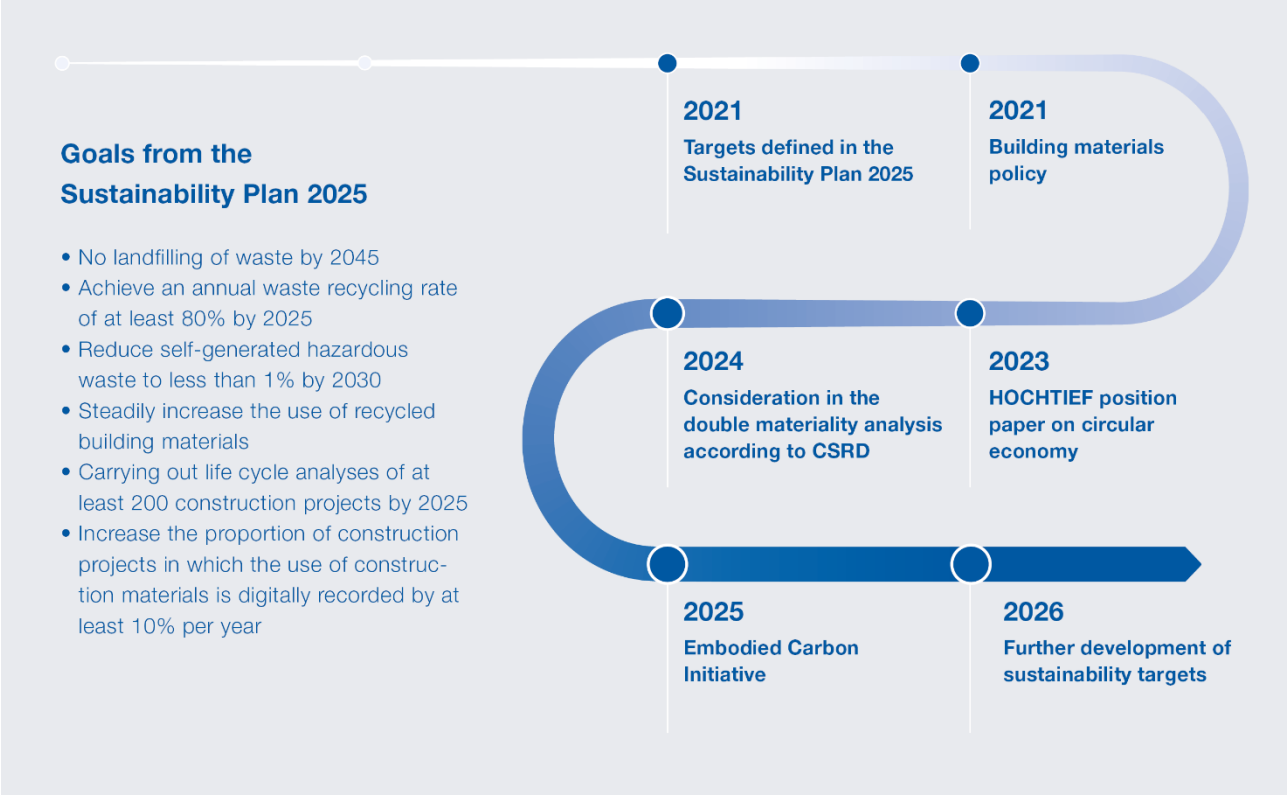
Transparent communication: To successfully transition to a circular economy, it is essential to collaborate closely with our stakeholders. That makes effective communication an integral part of the HOCHTIEF circular economy strategy. This collaboration is crucial in order to work together on sustainable solutions and successfully achieve a circular economy along the value chain. Furthermore, a competitive advantage can be gained by effectively communicating the benefits of circular practices to our stakeholders, and especially our clients.

HOCHTIEF circular economy strategy

During the reporting year, we made major progress in advancing circular economy initiatives throughout the Group. We are moving closer and closer to a circular business model with the growing use of digital solutions to track material and waste data and with increasingly efficient management of our resources and materials.

Currently, we are reviewing the Group-wide adoption of related targets for this thematic area as we develop new sustainability targets. In the course of this review, we aim to ensure that circular principles are integrated even more systematically into our processes in the future and make a tangible contribution to implementing our sustainability strategy.

Milestones in the HOCHTIEF circular economy strategy



Actions and targets

E5-2 I E5-3

The entire HOCHTIEF Group pursues a range of initiatives and activities to ensure the effective implementation of our circular economy strategy. These cross-cutting measures are paralleled with numerous individual initiatives implemented at project level. Such approaches are geared to the specific circumstances (such as location, project type, client needs, and material requirements) and form an integral part of our efforts toward the transition to a circular economy.

Under our circular economy strategy, we identify key action areas for efficient and responsible resource and waste management on the basis of the waste hierarchy: (a) prevention of waste in the upstream and downstream value chain; (b) preparing for reuse; (c) recycling; (d) other recovery (such as energy recovery); and (e) disposal. The priority is on consistent avoidance of waste, including by improving planning processes, sustainable procurement, and efficient material use.

Waste hierarchy

The material actions currently being implemented are described below. They mostly apply to all HOCHTIEF Group business activities. Due to their project-related nature, the actions presented do not have a clearly defined end date, but will be implemented continuously in HOCHTIEF's regions of operation over the short, medium, and long-term time horizons specified in the ESRS 2 section. The actions presented address all material impacts, risks, and opportunities identified for the HOCHTIEF Group in relation to circular economy and resource use. Responsibility for implementation lies with the HOCHTIEF units, and progress is tracked against the targets by monitoring, reporting, and control (further information in the ESRS 2 section).

Use of sustainable materials (E5-PI1, E5-NI1 to E5-NI2, and E5-O1 to E5-O2)

The sustainable, responsible, and resource-efficient use of (construction) materials is a key element of our circular economy strategy, and is increasingly important throughout the entire HOCHTIEF value chain.

Consistent focus on sustainable material flows has both environmental and financial benefits and helps HOCHTIEF raise efficiency across its operational business activities and reduce long-term risks along the value chain. Through the sustainable procurement and use of materials, we make an important contribution to waste prevention, reducing GHG emissions, and promoting closed material cycles. A case in point in this context is the HOCHTIEF Embodied Carbon Initiative, which incentivizes efforts to reduce the carbon emissions embedded in construction materials. We also benefit in terms of competitiveness, as sustainable material flows enable us to marshal resources more effectively and in a targeted and long-term manner.

Using sustainable materials—for instance, from reused or recycled sources, from sustainable markets, or in the form of certified or carbon-reduced building materials—contributes significantly to reducing environmental impacts along the entire value chain. By using such materials, we can close the material loop and further improve resource efficiency in our business activities.

Life cycle assessments (E5-PI1, E5-NI1 to E5-NI2, and E5-O1 to E5-O2)

In order to optimally incorporate HOCHTIEF's expertise in planning, design, construction, operation, and maintenance into our projects in the interests of advancing the circular economy, a detailed, integrated approach is needed that takes in the entire life cycle of each project and the entire value chain. That approach is life cycle assessment (LCA)—a fundamental method underlying the use of circular business practices over the entire project life cycle. Key facets of this include:

- **Emission reduction and energy efficiency:** LCAs reveal potential for reducing energy consumption while also promoting the incorporation of energy-efficient materials and technologies into projects.
- **Resource efficiency optimization:** Using LCAs, HOCHTIEF can precisely plan and document the flow and use of materials and thus reduce primary resource consumption. This supports the strategic objective of efficient resource use and incorporating recyclable materials into the design process.
- **End-of-life processes:** LCAs are an essential basis for circular business activities because they enable precise traceability of components and raw materials throughout the entire life cycle. This makes it possible to identify and track reusable and recyclable materials in end-of-life processes such as dismantling, disassembly, or modernization. In this way, working in close collaboration with clients and business partners, HOCHTIEF helps to close material cycles and minimize resource losses.
- **Efficient waste management and recycling:** LCAs identify potential for waste reduction, hence supporting waste management across the entire waste hierarchy—a core priority for the HOCHTIEF Group. Circular economy principles require waste to be avoided entirely over the long term.

HOCHTIEF already uses LCAs and plans to incorporate the methodology into other projects. We proactively offer LCAs to our clients to assist them in understanding the environmental impact of their projects and making informed decisions regarding more sustainable solutions. This is a significant element of our sustainability strategy and sends a clear message within the industry for the adoption of more environment-friendly business practices.

Digitalization and circular design ((E5-PI1, E5-NI1 to E5-NI2, and E5-O1 to E5-O2)

A key element of our sustainability strategy is the ongoing digitalization of our business activities. This not only improves data availability across the Group but also and above all creates efficiency gains along our entire value chain. These efficiency gains have a positive knock-on effect on costs, resource requirements, and environmental impact. In addition to the key areas mentioned below, an important role is also played by telematics, digital construction site monitoring, autonomous machinery and vehicles, sustainable transport and logistics solutions, and other project-specific digital solutions. Examples include:

- **Building Information Modeling (BIM)** makes it possible to create a digital twin of a project, allowing for the advance simulation and planning of all stages from design and construction to operation and maintenance, including dismantling and refurbishment projects (and reuse of the relevant materials and waste).
  Notably with regard to maintenance, having precise information on all materials used allows maintenance and repairs to be carried out in a targeted and efficient manner.
- **Digital material passports** are a prerequisite for efficient reuse of materials and the long-term transition to a fully circular business model, as they enable HOCHTIEF to transparently document the resources used in projects over their entire life cycle, identify dismantling and reuse potential at an early stage, and thus systematically increase the share of value added accounted for by existing materials. Digital material passports additionally enable us to communicate sustainable solutions transparently to clients, quantify resource-related and financial benefits, and thus maximize our positive influence across all stages of a project.

Waste management and recycling (E5-PI1, E5-NI1 to E5-NI2, and E5-O1 to E5-O2)

Waste management in line with the waste hierarchy is a central action area when it comes to implementing HOCHTIEF's circular economy strategy. In view of its already considerable material requirements and waste volumes, our industry has a special responsibility to develop efficient and sustainable solutions. To promote the transition to a circular economy and minimize waste volumes, HOCHTIEF targets actions geared to the complete elimination of landfilling along our entire value chain over the long term and the efficient and resource-conserving handling of existing waste:

- **Avoidance**: Especially where we are involved in the design stage of a project early on, significant volumes of material and hence future quantities of waste can be prevented by designing projects along circular design principles and precisely predicting material requirements. Modular construction methods, avoiding composite materials and, where possible, using existing building fabric are key waste prevention measures that reduce dependence on primary resources. That is why we aim to support our clients in avoiding waste across the board and to provide them with more sustainable, resource-efficient solutions.
- **Preparing for reuse**: Incorporating disassembly and reuse options early on in the design stage with the aid of digital tools such as BIM makes it possible to prepare for the efficient reuse of engineering materials in both the maintenance and disassembly of a project. In addition, systematically monitoring and recording waste volumes across all projects plays a key role in efficient reuse.
- **Recycling**: HOCHTIEF works on various fronts to continuously raise the waste recycling rate. This first and foremost includes using recyclable materials in the construction phase as well as promoting innovative ideas to recover and reuse the main engineering materials (concrete, asphalt, and steel) from existing projects. In addition, large parts of the building fabric can continue to be used, or directly reused, in refurbishment and upgrading.
- **Disposal**: Action includes employee training, the use of more environmentally friendly materials in business operations, and strict structuring as well as monitoring of disposal processes. The focus here is on the proper, safe disposal and treatment of waste, and in particular on minimizing the volume of self-generated hazardous waste. A key success factor is close collaboration with our (waste disposal) subcontractors. Good cooperation can ensure that waste streams are recorded transparently, efficient recycling processes are used, and circular solutions are implemented along the entire value chain.

E5-3

The thematic area of resource use and circular economy is an integral part of HOCHTIEF's Group-wide strategy. Accordingly, Group-wide targets were included for this area in the HOCHTIEF Sustainability Plan 2025.

Those targets are presented in the following. They mostly apply to all HOCHTIEF Group business activities and operating regions and address all material impacts, risks, and opportunities identified for the HOCHTIEF Group in relation to resource use and circular economy.

Target[1]: Promote life cycle analyses by actively engaging with clients and performing these analyses in at least 200 construction projects by 2025

Relation to IROs: E5-PI1, E5-NI1 to E5-NI2, E5-O1 to E5-O2	**Base year:** 2022	**Target year:** 2025	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline: n/a	**Target:** at least 200	**Geographical boundaries:** worldwide
	Unit: absolute, total figure	**Value chain:** upstream, own activities, downstream	

Target-setting methodologies and assumptions:

The target not only strengthens HOCHTIEF's position as a leader in sustainable construction but also promotes a sustainable construction industry driven by nonstop innovation and the pursuit of a circular economy.

For HOCHTIEF, it is particularly important to actively involve our clients in this process in order to jointly develop custom-tailored, resource-efficient solutions and to optimize the efficiency of projects throughout their entire life cycle. The life cycle assessments (LCAs) are based on the recognized standards (such as ISO 14040/14044), which provide a structured and comprehensive approach to assessing environmental impacts over the entire life cycle of a structure. Applying these standards can bring about significant resource savings and reductions in GHG emissions, considerably improving both the financial and environmental performance of construction projects.

Close collaboration with our clients ensures that the results of life cycle assessments are incorporated into project design and execution so as to maximize resource efficiency and sustainability in each project. Furthermore, the ongoing use of LCAs allows us to build our data repository for future projects and come up with even more precisioned, sustainable solutions.

Status and trend analysis:

LCAs are a central element of the circular economy and our decarbonization strategy. Since 2022, LCAs have been conducted for a total of 226 projects according to the scope of consolidation underlying the Sustainability Plan 2025, meaning that we have achieved our target. These efforts are a key part of our sustainability strategy, which we will continue to actively pursue. LCAs were carried out for a total of 221 projects in accordance with the scope of consolidation.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Target[1]: HOCHTIEF has set a target of increasing by at least 10% a year the share of construction projects in which the use of construction materials is digitally recorded.

Relation to IROs: E5-PI1, E5-NI1 to E5-NI2, E5-O1 to E5-O2	**Base year:** n/a	**Target year:** annually	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline: Prior year	**Target:** at least 10%	**Geographical boundaries:** worldwide

Value chain:

upstream own activities downstream

Target-setting methodologies and assumptions:	The target marks a key step toward improving material efficiency and promoting the circular economy. Transparent recording and documentation of materials is essential for HOCHTIEF to manage resources sustainably and recycle materials in a closed loop. Integrating Building Information Modeling (BIM) and digital twins makes for precise, dynamic tracking of (construction) materials used throughout the entire life cycle of a project. These digital tools support, for example, the creation of a digital material passport that stores all material-related information centrally for ready access. As a result, options for future disassembly and reuse can be planned at an early stage and fine-tuned. Circular design ensures that construction materials are engineered and incorporated into a structure in such a way that they can be easily removed and reused at the end of their useful life, thus enhancing HOCHTIEF's innovative capacity and competitiveness.
Status and trend analysis:	In the reporting year, we enhanced our expertise and strengthened our focus on this topic. According to the scope of consolidation underlying the Sustainability Plan 2025, digital recording of key construction materials was carried out in 259 active projects in 2025, marking a year-on-year increase by 62 projects (31%) compared to the previous year. We have thus achieved our target. In relation to the scope of consolidation, key construction materials were recorded in 248 projects which corresponds to a major increase of 26%.[2]

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] Updated figure 2024: 197

Target[1]: Annual waste recycling rate of at least 80% by 2025 and ongoing increases thereafter

Relation to IROs: E5-PI1, E5-NI1 to E5-NI2, E5-O1 to E5-O2	**Base year:** n/a	**Target year:** 2025	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline: Prior year	**Target:** at least 80%	**Geographical boundaries:** worldwide

Value chain:

○ upstream ● own activities ● downstream

Target-setting methodologies and assumptions:	The target of increasing the reuse and recycling rate to at least 80% is an important goal that makes a key contribution to promoting the circular economy. It is especially important to HOCHTIEF because construction and demolition waste accounts for a significant share of total waste. Consistently reusing and recycling materials means less demand for primary resources, cuts down on landfilling, and reduces the related GHG emissions. The target also helps reduce costs, as less material is disposed of and precious resources are kept in the loop. A gradual increase in the recycling rate beyond 2025 promotes the long-term vision of a sustainable construction industry with closed material cycles. Focusing on these goals not only improves the company's environmental footprint but also enhances its competitiveness and innovating capacity with regard to resource-conserving construction practices.
Status and trend analysis:	According to the scope of consolidation underlying the Sustainability Plan 2025, the annual target of 80% was again achieved in the reporting year, with a waste recycling rate (including reuse) of 86%. In the four years of application of the Sustainability Plan 2025, an average recycling rate of 87% was achieved. In relation to the scope of consolidation, a waste recycling rate of 86% was achieved.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Target[1]: Reduce self-generated hazardous waste to less than 1% of total waste by 2030

Relation to IROs: E5-PI1, E5-NI1 to E5-NI2, E5-O1 to E5-O2

Base year: n/a

Target year: 2030

Progress measurement: quarterly, Group-wide, and per operating unit

Baseline: n/a

Target: less than 1%

Geographical boundaries: worldwide

Value chain:

○ upstream ● own activities ● downstream

Target-setting methodologies and assumptions:	The target is an important step toward sustainable waste management, contributing significantly to responsible resource use and environmental protection. For HOCHTIEF, which works with large quantities of materials in the course of its business activities, minimizing hazardous waste is especially important because the substances concerned pose substantial environmental and health risks. By focusing on the self-generated hazardous waste, HOCHTIEF can directly influence the reduction achieved by using sustainable building materials, deploying innovative construction methods, and applying strict safety and disposal policies. Less hazardous waste means lower disposal costs, reduced liability risks, and better environmental performance. Setting and consistently implementing clear reduction targets not only supports the circular economy but also reinforces the company's position as a sustainable and responsible player in the industry.
Status and trend analysis:	According to the scope of consolidation underlying the Sustainability Plan 2025, self-generated hazardous waste accounted for 0.04% of total waste in the reporting year. This means we have significantly outperformed our long-term target (1%). In relation to the scope of consolidation, self-generated hazardous waste accounted for 0.4% of total waste in the reporting year.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Target[1]: Zero landfilling of waste by 2045

Relation to IROs: E5-PI1, E5-NI1 to E5-NI2, E5-O1 to E5-O2

Base year: n/a

Target year: 2045

Progress measurement: quarterly, Group-wide, and per operating unit

Baseline: n/a

Target: zero tons

Geographical boundaries: worldwide

Unit: absolute, metric tons (t)

Value chain: ○ upstream ● own activities ● downstream

Target-setting methodologies and assumptions:

The target is a key step toward a functioning circular economy. A zero-waste construction industry not only cuts demand for natural resources but also minimizes the GHG emissions related to the extraction, processing, and disposal of construction materials. By fully utilizing and recycling resources, valuable materials remain in the economic cycle, thus reducing costs and environmental impacts over the long term. For HOCHTIEF, this means systematically refining strategies to raise material efficiency and establish closed material cycles. The target also prevents important materials and resources from being lost to the material cycle.

Status and trend analysis:

A total of 8,070,191 metric tons of waste was generated in the reporting year according to the scope of consolidation underlying the Sustainability Plan 2025. Extensive measures within the projects have led to the reuse and/or recycling of large quantities of waste—a total of 6,960,672 metric tons. In the reporting year, 780,786 metric tons of waste went to landfill. Our long-term target remains to reduce the landfilling of waste to zero by 2045. In relation to the current scope of consolidation, we sent 812,154 metric tons of waste to landfill.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Target[1]: HOCHTIEF aims to continuously increase the proportion of reused and recycled construction materials in our projects

Relation to IROs: E5-PI1, E5-NI1 to E5-NI2, E5-O1 to E5-O2	**Base year:** 2021	**Target year:** continuous	**Progress measurement:** quarterly, Group-wide, and per operating unit
	Baseline: N/A	**Target:** higher than baseline	**Geographical boundaries:** worldwide
	Unit: relative (%)	**Value chain:** ○ upstream ● own activities ○ downstream	

Target-setting methodologies and assumptions:	Increased use of recycled construction materials will significantly reduce resources consumption/ construction materials and GHG emissions while also avoiding waste. This has both environmental and economic benefits. Increasing the construction material recycling rate is hence an important step toward the long-term target of a circular economy.
Status and trend analysis:	We made good progress and achieved high recycling rates during the reporting year, with increases in the recycling rate notably for the most frequently used construction materials— concrete and asphalt. According to the scope of consolidation underlying the Sustainability Plan 2025, the recycling rate rose to 41% for concrete and 66% for asphalt. Similarly high recycling rates are achieved for the current scope of consolidation (concrete: 37%; asphalt: 60%).

E5-4
Resource inflows

In line with sectoral requirements and the material impacts, risks, and opportunities for our company, the HOCHTIEF Group's main resource impacts relate to the main materials used in our projects.

Our activities and the upstream value chain chiefly involve the use of the construction materials referred to in this section, such as concrete, steel, asphalt, cement, glass, and timber. Other material resource inflows comprise the use of water and energy in our own business activities and along our entire value chain. These matters are covered in detail in the Climate change and Water and marine resources sections.

We aim for high recycling and reuse rates to optimize the use of our resource inflows while minimizing waste.

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Technical and biological materials used in the HOCHTIEF Group

	2025 (t) (Reference: SP 2025)[1]	Of which recycled	2025 (t)	Of which recycled	Share of total weight
Technical materials	**13,118,194**		**9,731,994**		**98%**
Asphalt	1,938,202		1,380,784		
of which recycled asphalt	1,271,645	66%	825,710	60%	
Concrete	8,797,892		7,176,642		
of which recycled concrete	3,646,058	41%	2,673,308	37%	
Glass	13,039		13,039		
of which recycled glass	2,418	19%	2,418	19%	
Steel	546,636		513,382		
of which recycled steel	327,130	60%	293,266	57%	
Cement	191,037		94,451		
of which recycled cement	442	0%	442	0%	
Aggregates	1,631,388		553,696		
of which recycled aggregates	–	0%	–	0%	
Biological materials	**186,725**		**183,157**		**2%**
Timber[2]	186,725		183,157		
of which recycled timber	10,788	6%	10,610	6%	
Total weight of technical and biological materials	**13,304,919**		**9,915,151**		
of which total weight of recycled technical and biological materials	5,434,419		3,978,302		40%

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[2] Of the total amount of timber used in the 2025 reporting year, 1.01% is FSC-certified. CSA, PEFC and other forestry certification schemes accounted for 1.95%.

E5-5
Resource outflows

The HOCHTIEF Group focuses on integrating circular economy principles into its projects. The main resource outflows relate to projects in the Group's various business activities. Within this, the scope of activities varies according to the contractual agreement. This ranges from construction-only contracts with limited influence on material and waste management to projects involving full responsibility for design, material selection and quality, and complete resource management.

In the HOCHTIEF Group's business activities, particular attention is paid to circular economy factors in project design. According to the project type, contract type, scope, and client requirements, factors considered include durability, reusability, capacity for disassembly, remanufacturing, recyclability, and optimized resource use.

At HOCHTIEF, we aim to deliver projects that meet the challenges faced in operational use. The durability of our projects is a key part of our approach in contributing to sustainable development. Durability primarily depends on the requirements and decisions of our clients as well as on applicable technical standards. The type of contractual agreement, the business partnerships as well as the legal and environmental requirements also play a role. For greenhouse gas reporting in accordance with ESRS E1, construction and infrastructure projects are estimated to have an average lifetime of 60 years.

With regard to recyclability, as with durability, a number of different factors affect the proportion of recyclable materials. This is influenced by knowledge from completed projects, technical specifications and standards, client decisions as well as applicable legal and environmental requirements. We fundamentally aim for continuous improvement in this regard. This calls for advanced technologies that we are actively working to fine-tune.

Waste

Waste generation in the HOCHTIEF Group

	2025 (Reference: SP 2025)[2]	2025
Total amount of waste generated (t)	**8,070,519**	**5,648,471**
Recycling rate[1]	**86%**	**86%**
Total amount of non-recycled waste (t)	1,109,847	818,534
Share of non-recycled waste in the total amount of waste generated (%)	14%	14%

[1] Non-hazardous waste accounted for 97% of the total waste volume in the HOCHTIEF Group in the reporting year. Accordingly, the 88% recycling rate is made up of 88% recycled non-hazardous waste and 72% recycled hazardous waste.
[2] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Waste generation by recovery operation and waste treatment in the HOCHTIEF Group

	2025 (Reference: SP 2025)[2]	2025
Hazardous waste[1] (t)	**234,839**	**252,876**
Recovery operations (t)	**35,737**	**46,788**
Preparation for reuse	32,301	43,352
Recycling	3,437	3,437
Other recovery operations (composting)	–	–
Disposal operations (t)	**199,102**	**206,088**
Incineration (with energy recovery)	178	178
Incineration (without energy recovery)	1,700	17
Landfilling	197,223	205,892

	2025 (Reference: SP 2025)[2]	2025
Non-hazardous waste (t)	**7,835,680**	**5,395,595**
Recovery operations (t)	**6,924,935**	**4,783,148**
Preparation for reuse	4,029,647	1,887,807
Recycling	2,894,535	2,894,589
Composting	753	753
Disposal operations (t)	**910,745**	**612,446**
Incineration (with energy recovery)	5,719	5,719
Incineration (without energy recovery)	321,463	465
Landfilling	583,563	606,262

[1] In the 2025 reporting year, 22,728 metric tons (3,007 metric tons comparable to the Sustainability Plan 2025:) of hazardous waste was generated by our own activities, corresponding to 0.04% of total waste.
[2] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Waste streams in the HOCHTIEF Group

	2025 (Reference: SP 2025)[1]	2025
Hazardous waste (t)	**234,839**	**252,876**
Construction waste	5,915	5,915
Waste from earthworks	185,373	185,373
Demolition waste	3,741	3,741
Other waste	39,810	57,847
Non-hazardous waste (t)	**7,835,680**	**5,395,595**
Construction waste	612,370	612,385
Waste from earthworks	3,945,957	3,945,957
Demolition waste	540,848	540,848
Other waste	2,736,506	296,405

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Number of project life cycle assessments carried out within the HOCHTIEF Group[1]

	2025 (Reference: SP 2025)[2]	2025[3]
HOCHTIEF Group	**226**	**221**

[1] Cumulative number of projects for which life cycle assessments have been conducted (since 2022)
[2] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[3] In the 2025 reporting year, life cycle assessments were carried out for 85 projects.

Number of projects within the HOCHTIEF Group with digital recording of construction materials used[1]

	2025 (Reference: SP 2025)[2]	2025[3]
HOCHTIEF Group	**259**	**248**

[1] Cumulative number of projects in which the use of construction materials has been digitally recorded (since 2022)
[2] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.
[3] Construction materials were digitally recorded in 51 projects in the 2025 reporting year.

Notes on ESRS E5 metrics: Methodology and data sources

Transparent and verifiable data collection is critical to making informed judgments about the development of our strategy, actions, and targets in relation to our material impacts. The methodology, underlying assumptions, and data sources used to arrive at the metrics disclosed in this section are therefore explained in the following. Throughout the Group, standardized processes and data collection methods are applied in order to ensure high standards of data quality, consistency, and comparability. All metrics in this section have undergone internal quality assurance, but have not been validated by another external body.

Information on the quality assurance of the metrics can be found in the ESRS 2 section under Data completeness, reliability, and quality. The operating companies apply the Group-wide data collection hierarchy, which prioritizes suitable primary data.

Metrics in the ESRS E5— Circular economy and resource use section	Significant assumptions, calculation methodologies, and limitations
Resource inflows— Technical materials	The main technical resource inflows in our business activities by consumption volume are steel, concrete, cement, asphalt, aggregates, and glass. Consumption data on steel, cement, asphalt, and aggregates is recorded in metric tons (t), while consumption data on concrete is recorded in cubic meters (m^3) and converted into metric tons using a Group-wide conversion factor of 2.5 t/m^3. With the exception of the consumption data for glass, these metrics are largely based on primary data, with precise quality assurance ensured by checking delivery notes, invoices, and quantities purchased. Quantifying glass is harder and sometimes requires estimates, as glass is frequently supplied piecewise, which means that primary data can only be presented on a partial basis. In these cases, consumption data for glass is based on estimates from procurement volumes. The recycled quantities of technical materials as resource inflows are recorded, where available, on the basis of actual quantities recycled. If this information is not available, the recycled quantities are based on industrial averages. Quality assurance of consumption data at all data collection levels and Group-wide data consolidation ensure that there is no double counting and that consumption volumes are recorded accurately.
Resource inflows— Biological materials	Based on the volume consumed, timber is the one material biological resource inflow in our business activities. Timber consumption data is recorded in cubic meters (m^3) and is largely based on primary data, with precise quality assurance ensured by checking delivery notes, invoices, and quantities purchased. Consumption data is recorded in cubic meters (m^3) and converted into metric tons using a Group-wide conversion factor of 0.5 t/m^3. The recycled quantities of timber as resource inflows are recorded, where available, on the basis of actual quantities recycled. If this information is not available, the recycled quantities are based on industrial averages. Consumption volumes of certified timber are recorded using the same methodology. Various certification schemes are covered. In line with the cascading principle under ESRS, the aim is to use timber as efficiently and sustainably as possible throughout the Group. This includes promoting the reuse and recycling of timber in order to generally extend its life cycle. Quality assurance of consumption data at all data collection levels and Group-wide data consolidation ensure that there is no double counting and that consumption volumes are recorded accurately.

Metrics in the ESRS E5— Circular economy and resource use section	Significant assumptions, calculation methodologies, and limitations
Waste generated— Total amount	Group-wide waste generation is largely recorded on the basis of primary data. This includes delivery notes, invoices, procurement volumes, and disposal volumes. The fact that weighing slips are also frequently available means consumption quantities can be precisely recorded and reported in metric tons (t). This applies to both hazardous and non-hazardous waste. In the reporting year, in collaboration with the operating companies, the definitions of waste management methods were made more rigorous and incorporated into the central data collection system. This is to ensure uniform recording and analysis of waste parameters throughout the Group. Accordingly, the operating companies classify hazardous waste on the basis of the revised definitions and the respective national requirements.
Hazardous waste	Hazardous waste is classified by the HOCHTIEF units. Group-wide classification of hazardous waste in accordance with ESRS is planned Group-wide, while having due regard to national regulations in order to ensure consistent and appropriate classification throughout the Group.
Recovery operations	The main recovery operation types at HOCHTIEF for the purposes of ESRS are recycling, preparation for reuse, and to a lesser extent composting. Information on the waste recovery operations used is collected on a project-specific basis and is hence largely based on primary data. Where subsequent waste management is performed by waste management contractors, the information principally draws on primary data from the contractors.
Waste treatment	The main waste treatment types at HOCHTIEF for the purposes of ESRS are incineration with energy recovery, incineration without energy recovery, and landfill. Information on the waste management methods used is largely based on primary data from waste management contractors and is recorded by the operating units.
Waste streams	Based on consumption data, the main waste streams for the purposes of the ESRS are construction waste, waste from earthworks, demolition waste, and other waste. The construction waste and demolition waste categories mainly consist of materials such as concrete and masonry. These waste streams are recorded on a project-specific basis in collaboration with waste management contractors. Waste from earthworks, mainly consisting of soil, sand, and gravel, is also recorded on a project-specific basis and in collaboration with waste management contractors. In many cases, such waste is directly reused in the company's own operations on the same construction site (unless it is classified as hazardous). Other waste streams include various materials that the operating units are unable to clearly assign to any of the main categories. Comprising a variety of materials, they are recorded in this category according to project-specific circumstances and in collaboration with waste management contractors.

Metrics in the ESRS E5—

Circular economy and resource use section	Significant assumptions, calculation methodologies, and limitations
Waste recycling rate	The waste recycling rate is based on Group-level calculation of reused and recycled waste as a percentage of total waste generated. This metric is a key indicator of waste recycling and waste reuse efficiency in the Group and thus tracks our progress in sustainable resource management and the reduction of waste sent to landfill.
Number of project life cycle assessments carried out	The number life cycle assessments (LCAs) is recorded and documented per operating unit on a project-specific basis.
Digital recording of construction materials	The number of projects with digital recording of construction materials is recorded and documented by the operating units on a project-specific basis. Projects are also included that relate only to individual material groups.

Disclosures pursuant to Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation)

Context and introduction

The European Commission aims to channel more capital into sustainable economic activities with a targeted action plan. The EU Taxonomy Regulation represents an important building block of this action plan and is intended to play a significant role in helping Europe achieve its goal of climate neutrality by 2050 and the objectives of the Green Deal, EU's green growth strategy. It has introduced a uniform EU-wide classification system for environmentally sustainable economic activities together with corresponding disclosure obligations.

The EU Taxonomy comprises six environmental objectives to identify environmentally sustainable activities:

1. Climate change mitigation (CCM)
2. Climate change adaptation (CCA)
3. The sustainable use and protection of water and marine resources (WTR)
4. The transition to a circular economy (CE)
5. Pollution prevention and control (PPC)
6. The protection and restoration of biodiversity and ecosystems (BIO)

An economic activity is considered environmentally sustainable within the meaning of the EU Taxonomy Regulation if it:

- contributes substantially to one or more environmental objectives;
- does not significantly harm (DNSH) any of the above-mentioned environmental objectives;
- is carried out in compliance with minimum social safeguards for, among other areas, occupational safety and human rights; and
- complies with technical screening criteria established by the European Commission for each environmental objective and activity.

In the Group Report 2025, HOCHTIEF reports on the percentages of taxonomy-eligible and taxonomy-aligned economic activities in accordance with the European Commission's requirements for all six environmental objectives.

HOCHTIEF's approach

The screening of EU Taxonomy requirements is undertaken by the HOCHTIEF Group companies on a project level. Projects' information is obtained directly from the internal project management systems. Based on the different criteria applicable for the identified taxonomy-eligible economic activities, HOCHTIEF Group companies evaluate the taxonomy-alignment of their respective projects.

Taxonomy-eligibility analysis

To identify taxonomy-eligible activities, each HOCHTIEF activity is checked against the requirements of the EU Taxonomy. Specifically, HOCHTIEF business activities that meet one of the activity descriptions listed in the delegated acts of the EU Taxonomy are considered as taxonomy-eligible. Conversely, if an activity is not covered by the regulations or does not meet the descriptions for activities defined by the European Commission, it is considered as taxonomy-non-eligible.

Double-counting is avoided by assignment to one single activity. The economic activities identified are divided into "taxonomy-eligible", "eligible-to-be-enabling" ("E"), and "eligible-to-be-transitional activities" ("T").

Taxonomy-alignment analysis
HOCHTIEF's identified taxonomy-eligible activities are then assessed for taxonomy-alignment taking into account the technical screening criteria.

As in previous years, taxonomy-alignment is assessed at project level using a digital solution developed by HOCHTIEF's innovation company, Nexplore, where the technical screening process is transposed into specific taxonomy questionnaires for each economic activity. This enables users in Group companies to carry out the verification of the EU Taxonomy standards for their respective projects. For each project, the tool guides the user through activity-specific questionnaires, based on the technical screening criteria covering the substantial contribution and DNSH screening, in order to obtain feedback on whether a project meets all regulatory requirements from the EU and can therefore be counted as taxonomy-aligned. Additionally, supporting documentation and evidences for the questionnaires are uploaded to the tool and archived centrally. The tool is used also for the internal validation and confirmation processes. The minimum social safeguards are also formulated throughout the questionnaires. A confirmation of company policies is mandatory, which includes the HOCHTIEF Code of Conduct and Code of Conduct for Business Partners, HOCHTIEF's Human Rights Corporate Management System, and other directives – for example Group Directives on Anti-Bribery, Anti-Discrimination, Anti-Harassment and Anti-Bullying or Taxes. (Please find more information on these topics in the Own workforce and Governance sections.)

After completing the taxonomy screening for a Group company, the tool produces a report listing taxonomy-aligned projects and activities as well as the environmental objectives to which they make a substantial contribution.

Interpretations and definitions are centrally coordinated by HOCHTIEF Corporate Headquarters. These are based, among others, on the clarifications provided by the Technical Expert Group (TEG) on sustainable finance, the technical annexes to the final report on the EU Taxonomy, and the "Frequently asked questions" published by the European Commission, which are also incorporated into the tool.

KPI calculation and results
For 2025, HOCHTIEF reports on the proportion of revenues, capital expenditure (CapEx), and operating expenditure (OpEx) associated with taxonomy-eligible and taxonomy-non-eligible economic activities as well as taxonomy-aligned and not taxonomy-aligned economic activities. All six environmental objectives are included.

These key performance indicators (KPIs) were determined for 2025 using the same methodology as in 2024. In January 2026, the Delegated Act of July 4, 2025 simplifying reporting under the EU Taxonomy Regulation came into force. This offers the option of continuing to apply the regulations applicable as at 31 December 31, 2025 for the financial year 2025. This option is being exercised, meaning that, among other things, the reporting templates used in the previous year will remain unchanged. Significant changes in the KPIs result in particular from changes in the scope of consolidation. These mainly include the deconsolidation of Flatiron and the initial consolidation of Dornan (see Basis of Consolidation in the Notes to the Consolidated Finanacial Statements). For activities 7.1 "Construction of new buildings" and 7.2 "Renovation of existing buildings", the prior-year figures for taxonomy-aligned revenues (CCM 7.1: 1.5% and CCM 7.2: 0.6%) and OpEx (CCM 7.1: 1.3% and CCM 7.2: 0.0%) were adjusted because, upon retrospective review, a DNSH criterion was not met in certain projects.

Corresponding shares of revenues, CapEx and OpEx have been directly allocated to individual projects which, in turn, are allocated to individual activities. The allocation to economic activities follows an analysis based on Group-wide accounting under IFRS 15, as stipulated in the European Commission Notice C/2023/305. IFRS 15 sets out criteria for the recognition of revenue on the basis of the performance obligations satisfied by the reporting entity, including cases in which multiple performance obligations constitute one single bundle to which revenue is entirely allocated. Those IFRS 15 criteria are to be followed to determine how to allocate revenues to different economic activities when multiple performance obligations are satisfied for the same customer or group of customers. In this respect, the overall project can consist of individual project elements, such as small road sections in connection with our railway projects, engineering services in the construction preparation phase or smaller technical installations in construction projects. These project elements certainly might also fulfill individual

taxonomy criteria, but direct allocation is only possible if a project is composed of individual performance obligations or several definable sub-projects. The allocation of the revenues from these HOCHTIEF activities to different economic activities under the EU Taxonomy follows the analysis that has been made in the consolidated financial statements in accordance with IFRS 15, i.e. depending on whether the goods and services are distinct or not. If the goods and services are distinct, the revenue is allocated to the corresponding, underlying economic activities.

Revenues are defined for this purpose as net sales according to IFRS, as reported in the Consolidated Statement of Earnings, and hence relate only to fully consolidated entities and joint operations. This means that entities accounted for using the equity method or as investments recognized in other comprehensive income are not included. The proportion of revenues accounted for by taxonomy-eligible and taxonomy-aligned economic activities is reported in this connection in relation to the sales figures in the Consolidated Statement of Earnings. Further information on the sales figures is provided in the Notes to the Consolidated Statement of Earnings (Sales). CapEx is calculated on a gross basis, excluding remeasurements, depreciation, amortization, or impairments. It includes expenditure on non-current intangible or tangible assets, including assets acquired as part of asset deals or share deals, as shown in the Consolidated Balance Sheet. For further information on CapEx, please see the Notes to the Consolidated Balance Sheet (Intangible assets, Property, plant and equipment, and investment properties). The proportion of CapEx KPIs is calculated as the part of CapEx derived from taxonomy-eligible and taxonomy-aligned activities, divided by total CapEx. In this calculation, the considered capital expenditures are not part of a CapEx plan. OpEx comprises non-capitalizable expenses recognized in the Consolidated Statement of Earnings, such as research and development, building renovation measures, maintenance and repair, as well as leasing and all other direct expenses from the maintenance of property, plant and equipment to ensure operational readiness of taxonomy-eligible and taxonomy-aligned assets. Further information on OpEx is provided in the Notes to the Consolidated Financial Statements (Other operating expenses, Lease liabilities). OpEx ratios are determined by dividing identified EU Taxonomy-related OpEx by total OpEx.

The KPIs are determined by the HOCHTIEF Group companies at project level. Following the assessment for taxonomy-eligible and taxonomy-aligned projects, the Group companies have gathered related information using the ERP systems that document all revenues, CapEx and OpEx for projects. Determined taxonomy-related KPIs and activities are aggregated at HOCHTIEF Group level.

The tables below represent the templates mandated by the European Commission and show the percentage shares of taxonomy-eligible and taxonomy-non-eligible economic activities, including taxonomy-aligned and not taxonomy-aligned activities, by revenue, CapEx, and OpEx.

Proportion of revenue from products and services associated with taxonomy-aligned economic activities – disclosure covering fiscal year 2025

Conclusions

Providing a sustainable and quality infrastructure plays a crucial role in the context of all six environmental objectives and is one of HOCHTIEF's guiding principles as one of the world's leading infrastructure groups with respect to sustainability.

HOCHTIEF continues responding to the demands of public and private clients to develop sustainable infrastructures, which are aiming at mitigating or adapting to the impact of climate change, promoting the sustainable use and protection of water and marine resources, driving the transition to a circular economy, supporting pollution prevention as well as protecting and restoring biodiversity and ecosystems. To this end, HOCHTIEF's Sustainability Plan 2025 is aligned with the activities identified by the EU in its Taxonomy as drivers of a decarbonized and sustainable economy.

Social information

ESRS S1
Own workforce

This section contains disclosures on HOCHTIEF's material IROs related to the company's own workforce. In our double materiality assessment, we have identified eight impacts (S1-PI1 to S1-PI4, S1-NI1 to S1-NI4), one opportunity (S1-O1), and one risk (S1-R1) in this area. These IROs are listed in the IRO table in the ESRS 2 section, together with disclosures on their location in the value chain, time horizon, and the nature of impacts. Disclosures on the directives and frameworks referred to in this section are also to be found in the ESRS 2 section.

Approach, policies, and processes

The actual and potential impacts of our strategy relate to employees working on our projects and in the service units within our own activities. They apply to the entire duration of an individual's employment—and also beyond, since employment relationships have consequences in terms of retirement and health provision. Likewise, potential occupational safety and health impacts on employees are not limited to the duration of the employment relationship.

Non-employees are included under the effects of our strategy to the extent that we reference them in the disclosures in this section. We refer in this regard to non-employees deployed at HOCHTIEF companies as temporary workers, and self-employed workers on our projects.

Own workforce

The Group's workforce comprises all employees in an employment relationship with a HOCHTIEF Group company that is consolidated in the Consolidated Financial Statements, irrespective of whether they are white-collar or blue-collar employees. This also includes employees who work in joint operations or joint ventures of the HOCHTIEF Group, provided that they have employment contracts with a fully consolidated company that is party to a joint venture or joint operation. The Group's workforce additionally includes non-employees who are self-employed or people provided by undertakings primarily engaged in employment activities.

Material impacts were identified in the double materiality assessment for 2025 conducted by HOCHTIEF. HOCHTIEF's assets and business activities along the value chain were assessed for actual and potential impacts, risks, and opportunities. A detailed description of this process, together with the identified material impacts,the material risk, and the material opportunity, is provided in the ESRS 2 section.

Our fundamental strategic approach and the management of the material impacts, opportunity, and risk are contained in the HOCHTIEF Group directives and HOCHTIEF policies. These are presented below under S1-1 and additionally in the context of the identified material impacts, the opportunity, and the risk.

Our strategy takes into account the interests of our employees from the outset. We will make future changes to our strategy in line with how the interests of our workforce develop. We derive actions and targets based on the interests of our employees.

S1-1

Our policies are based on our business activities. These include construction, construction management and other services on projects and in service units, where HOCHTIEF companies provide the services with their employees. This means that our employees contribute significantly to our business success. Their interests, views, and rights inform our policies in connection with the following strategic approaches:

- In the Group directive on Human Rights Governance, we have laid down obligations to respect and monitor human rights by means of due diligence processes.

- The Human Rights Statement of Principles expressly addresses matters and processes in relation to own employees. Another binding Group-wide framework is the HOCHTIEF Sustainability Plan 2025.

  In our Human Rights Statement of Principles and the above-mentioned Group directive on Human Rights Governance, we take account of internationally recognized standards, including the UN Guiding Principles on Business and Human Rights, the ILO Core Labor Standards, and the OECD Guidelines for Multinational Enterprises.

We rigorously pursue the aim of providing safe and healthy workplaces. The policies on health protection and the safety of our own employees are set out in the following frameworks:

- Group directive on Occupational Safety, Health, Environmental and Climate Protection: This Group directive stipulates responsibilities and requirements for occupational safety, health, and environmental and climate protection for HOCHTIEF Aktiengesellschaft. It pursues the overarching strategy of providing for legally compliant organizational structures and processes in order to prevent accidents and near-misses with potential impacts on the safety and health of employees/third parties as well as on the environment and the climate, and to record and analyze any accidents and near-misses that do occur. The directive does not distinguish with regard to physical or mental health.

- HOCHTIEF Sustainability Plan 2025: With regard to occupational safety, this addresses strategic focus areas aimed at preventing and reducing work accidents and ensuring high, recognized standards of occupational safety.

- The working environment focus area in the HOCHTIEF Sustainability Plan 2025 additionally overlaps with the occupational safety and health focus area with regard to mental health.

The HOCHTIEF strategy is substantiated by incorporating the above-mentioned occupational safety matters into the HOCHTIEF Sustainability Plan 2025.

- Rejection of child labor: HOCHTIEF does not tolerate illegal child labor, any form of exploitation of children or young people, and/or slavery, in accordance with the provisions of ILO Convention No. 138 on Child Labor.

  This policy is set out in the HOCHTIEF Code of Conduct and the Human Rights Statement of Principles. The policy on remedial action is detailed in the previously mentioned Group directive on Human Rights Governance.

- We reject discrimination, regardless of age, gender, disability, ethnic origin, religion or sexual orientation. The Group directive on Anti-Discrimination, Anti-Harassment, and Anti-Bullying prohibits discrimination and harassment. This policy is also enshrined in the HOCHTIEF Code of Conduct and likewise finds expression in the HOCHTIEF Sustainability Plan 2025 (“Workplace diversity”). The policy is further elaborated by an international working group of experts from the personnel departments.

- Employees need to be able to safeguard their interests. The strategic basis for this is the HOCHTIEF Code of Conduct and the Group directive on the Compliance Organization. A significant part of the HOCHTIEF Code of Conduct also relates to the right to organize and the right to collective bargaining.

- In accordance with local laws, we ensure that works councils and trade unions are able to represent employee interests in our operational processes. This form of transparent cooperation in a spirit of trust is documented in the HOCHTIEF Code of Conduct.

- Well-qualified employees are key to success in our business segments. The HOCHTIEF companies offer their employees individual development plans as well as a wide variety of professional and personal development opportunities. This policy is reflected in the HOCHTIEF Sustainability Plan 2025 under the heading of “Training, talent, and recruitment.”

- We provide flexible working models in support of positive work-life balance and work satisfaction. This strategic approach follows from the HOCHTIEF Sustainability Plan 2025, under “Working environment.”

Our living wage benchmarking approach is documented in the following Executive Board resolutions:

- Executive Board resolution on benchmarking a living wage in the European units. This resolution in 2021 provided for the benchmarking of a living wage for our own workforce in the European units using the Anker methodology. The benchmark for calculation of the living wage is the needs of a family with one child, based on the costs of food, clothing, accommodation, healthcare, and education.
- On the basis of a further Executive Board resolution from 2022, the living wage calculation was extended beyond the European units to include employees of Turner and CIMIC in the reporting year. Responsibility for living wage calculations lies with the HOCHTIEF companies. The calculations are performed annually under the responsibility of local personnel departments and reviewed by the HOCHTIEF Aktiengesellschaft Human Resources corporate department. It has not yet been possible to calculate a living wage at Leighton Asia because—in contrast to the situation at the European units—the publicly available sources are insufficient to support the calculation methodology used.

We will develop policies for non-employees once we have more detailed information about non-employees in terms of their numbers and the geographic locations where they are engaged in our business segments.

S1-2

We seek constructive dialogue with own workers (employees) and workers' representatives in order to engage with them. In this connection, we take account of the material positive and negative actual or potential impacts of our activities in relation to working conditions as well as equal treatment and equal opportunities for all.

The following processes are used:

- Compliance with statutory participation processes for codetermination in the German HOCHTIEF companies and the Czech and Polish companies of HOCHTIEF Infrastructure: Local works councils must be involved in accordance with local laws in matters relating to wage structuring, working times, the protection of vulnerable groups, and the agreement of training measures. Compliance with collective bargaining agreements as well as occupational safety and health are likewise subject to statutory monitoring responsibilities. Employees across the Group are engaged in the planning of related activities in occupational safety committees.

  In addition, the European Works Council represents the interests of employees from the various countries. This body is consulted at least once annually on matters that may affect employees across Europe. The Labor Director of HOCHTIEF Aktiengesellschaft attends the meetings of the European Works Council and ensures that it is properly informed and advised.

- Direct dialogue between employees and their superiors: For approximately half of all employees, employee interviews with superiors are held in the Group companies at least once a year. This provides a direct opportunity to bring up concerns and ideas as well as to find and agree upon constructive solutions there and then. Responsibility for conducting such interviews lies with superiors in each HOCHTIEF company. We do not track the effectiveness of actions agreed in these interviews as we are confident that what is agreed directly between superiors and employees will be put into effect with a high degree of commitment on both sides.

  At HOCHTIEF Group company Turner in the United States and at the European units, employee surveys are generally conducted every two years and in some cases at other intervals. These include employee feedback on topics such as occupational safety, mental health, compliance, and individual matters relating to professional development and wellbeing. Similar questions feature in employee surveys at Australian Group company CIMIC.

  We engage with workers and worker representatives by assigning human resources from HOCHTIEF companies. Several international working groups on social matters have been established at HOCHTIEF in the course of implementing the HOCHTIEF Sustainability Plan 2025. These generally have two members each from Human Resources at HOCHTIEF Aktiengesellschaft, HOCHTIEF Infrastructure, Turner, and CIMIC, and meet every three months. The working groups have been established for the various thematic areas of the HOCHTIEF Sustainability Plan 2025 (Health and Safety; Working Environment; Workplace Variety; Training, Talent, and Recruitment; and Social Activities). We generally strive to take the interests of all employees into account in relation to impacts. The working groups additionally take into account the perspective of vulnerable employee groups in relation to their specific thematic areas. With regard to women, for example, the working groups focus on the medium-term targets set out in the HOCHTIEF Sustainability Plan 2025 in relation to senior management positions and engineering trainees. These sustainability targets are presented under the heading "Workplace variety." The working groups also take into account the perspectives of employees in different age groups. In this regard, the HOCHTIEF Sustainability Plan 2025 includes the sustainability target of promoting diversity in teams and closer collaboration between generations under the heading "Workplace variety."

The Health and Safety working group, comprising experts from the above-mentioned companies, takes all employee groups equally into account as a matter of policy. Furthermore, the Human Rights Focus Group, established in 2023, continued to consult on human rights issues and processes in the reporting year, under the chairpersonship of the Chief Human Rights Officer. The Human Rights Focus Group is generally composed of up to two members each from the corporate departments Legal, Compliance, and Human Resources at HOCHTIEF Aktiengesellschaft. In addition, up to two representatives each take part from Procurement and Human Resources at HOCHTIEF Infrastructure GmbH. The focus group coordinates, in relation to the European companies, human rights topics that we address in this section of the report.

S1-3

As a matter of policy, we want our activities to have a positive impact and to avoid any negative impacts on employees. Should negative impacts nevertheless occur within the Group, we provide employees with the following channels to raise concerns and report matters in relation to their working conditions or their equal treatment and equal opportunities:

- Continuous process as part of HOCHTIEF's Human Rights Corporate Management System: We identify the human rights risks arising in our business activities that may impact our own employees as stakeholders. Under the Group directive on Human Rights Governance, the managements of Group companies are responsible for ensuring that functional departments are appropriately involved in the human rights and environmental risk analysis in order to identify, assess, and prioritize such risks and that they take action to implement the human rights principles and prevent human rights risks. In fulfilling these responsibilities, company managements are supported by the Group corporate departments and their own corporate functions, such as Procurement and Occupational Safety. The Human Rights Corporate Management System is reviewed and its effectiveness assessed annually by the Chief Human Rights Officer by reviewing and documenting the appropriate implementation of statutory due diligence obligations.

- Whistleblower systems that allow concerns to be openly raised with HOCHTIEF, on both a centralized and a decentralized basis, via an online platform, a hotline, or email: These provide a direct channel for employees to raise concerns and report issues. Submissions can also be made anonymously and we assure whistleblowers full protection against any reprisals. In a formalized process, HOCHTIEF companies ensure that all critical issues reported are investigated and appropriately dealt with so that suitable remedial measures can be taken. The process similarly provides for whistleblowers to be involved in follow-up and to receive feedback. Reported matters continue to be worked on until they are classified as resolved. Ease of access is facilitated by making the whistleblower systems publicly available, readily accessible, and transparent. Whether our own employees are aware of the systems and trust in them is assessed in the companies on a decentralized basis and is not tracked centrally.

- The effectiveness of our whistleblowing system is regularly confirmed by an internal audit conducted by Corporate Auditing that last took place in 2024 and will take place again in 2026. In addition, an external surveillance audit was successfully conducted in the 2025 reporting year and led to certification of the European HOCHTIEF companies.

- The ISO 45001 standard in use at HOCHTIEF and equivalent standards emphasize the importance of engaging with employees in decision-making processes that affect their health and safety. Among other aspects, this includes a process for reporting near misses.

Actions and targets

S1-4 I S1-5
Working conditions

Adequate wages

Adequate wages comprise rules-based pay at or above the minimum wage required by local law (S1-PI1).

In all business activities, HOCHTIEF's success is based among other factors on the satisfaction of our employees. Adequate wages are a significant factor here, as they enhance financial stability in relation to living expenses and better retirement provision. HOCHTIEF has identified adequate wages on the basis of applicable rules and regulations as a material matter (S1-PI1). Conversely, a negative impact arises if no adequate wages are paid that meet employees' needs in light of national economic and social conditions.

The adequate wage represents the basic minimum standard that results from country-specific requirements. We also take the living wage into account. Unlike an adequate wage, which is based on legal requirements, a living wage is the wage paid for regular working hours (excluding overtime) that is intended to cover the basic needs of employees and their families.

The HOCHTIEF companies are responsible for the annual adequate wage calculations, which are performed throughout the Group.

Our actions and their effectiveness

No action has been taken in relation to adequate wages as this is unnecessary in light of the full coverage.

All employees were paid an adequate wage corresponding to at least the locally applicable legal minimum wage in the reporting year.

In the reporting year, we reviewed and confirmed the living wage calculation methodology, which exceeds the adequate wage requirements. Depending on the country, it is based on the Anker methodology, use of the MIT calculator, or benchmarking collectively agreed wages against the statutory minimum wage. Decisions on action to be taken with regard to a living wage are made within the Group companies. At HOCHTIEF's Czech company, for example, the outcomes of the living wage review were taken into account in the January 2025 pay increase.

Both for adequate wages and the living wage, data analysis is performed by the respective HOCHTIEF companies. The analysis is verified by the Human Resources corporate department using the reported data.

With the above short-run measures, we aim to ensure that the outcomes of living wage reviews are taken into account in pay adjustments at each company. These measures also help to stabilize post-retirement pension benefits in the long term.

Our targets

We have not yet specified measurable targets as we have once again achieved full coverage with regard to adequate wages.

Collective bargaining, including rate of workers covered by collective agreements

The defined material topic relating to the application of collective bargaining agreements (S1-PI2) by HOCHTIEF companies is addressed by the HOCHTIEF Code of Conduct.

Responsibility for implementing this strategic approach generally lies with employees who decide whether to join a union.

Our actions and their effectiveness

HOCHTIEF takes the following short- and medium-term action in support of the identified material matter:

- Collective bargaining negotiations in the German units and at CPB Contractors in Australia. In the German units, codetermination representatives take part in collective bargaining.
- Application of collective wage agreements at CIMIC and Thiess in Australia
- Application of collective agreements for blue-collar employees at Turner
- At all European units, collective agreements are fully applied or incorporated by reference in employment contracts, in accordance with the collective bargaining arrangements and the legal framework.

The effectiveness of our measures is confirmed by the numerous agreements we have entered into with the collective bargaining parties. Time horizons are based in each case on the planned duration of negotiations with the trade unions. The negotiations are conducted with the involvement of the management of the companies concerned and, where required, employees of operational units and personnel department staff. Responsibility for verifying the application of collective agreements lies with the codetermination bodies in accordance with local laws.

In the reporting year, the European Works Council conducted a comparison between the provisions of collective bargaining agreements and the statutory provisions for employees not covered by a collective bargaining agreement. No disadvantage was identified in the comparison.

With regard to collective bargaining coverage and social dialogue in the European Economic Area (EEA), we have determined that the working conditions of 86% of employees at HOCHTIEF companies in Europe are already subject to collective agreements. With regard to our European units, we therefore seek to maintain a trusting and transparent working relationship with our codetermination and collective bargaining partners as well as to incorporate the arrangements that affect our employees' working conditions into binding agreements. Collective agreements also apply at CIMIC. In addition to the coverage provided by collective agreements, employee representatives are responsible for representing the interests of 99.4% of employees in the European companies. In addition to codetermination at the operational level, HOCHTIEF has a European Works Council, established pursuant to legal requirements. The above data was collected on a decentralized basis in the relevant operating companies.

Our targets

We have not set any targets in relation to the identified material impact as we have established an adequate framework with the existing policies.

Work-life balance

The strategic approach with regard to a positive working environment described under S1-1 includes the identified impact relating to the provision of flexible working models in the interest of work-life balance (S1-PI3). Another matter that we classify under the general heading of “Working environment” in the HOCHTIEF Sustainability Plan 2025 is the impact on employees assigned to work on construction sites away from home (S1-NI1).

Responsibility for implementation lies with the HOCHTIEF companies and, within them, primarily with the relevant personnel departments. Matters relating to the promotion of a positive working environment are discussed and developed in an international working group comprising experts from the personnel departments. Specific time horizons do not follow from the policy as the matters are addressed on an ongoing basis.

Our actions and their effectiveness

Action to be taken is identified in the various companies according to any processes in place as well as in accordance with applicable law. It is generally taken at short notice in order to respond swiftly to employee needs. Flexible working models in the form of mobile working are offered in the HOCHTIEF Group companies Turner and CIMIC, as well as in the German units. Parental leave is offered at Turner and CIMIC, irrespective of whether or not this is required by law. Turner has policies on hybrid working in order to grant employees greater flexibility as to their choice of workplace.

For employees working on construction sites away from home, project work has a negative impact on work-life balance. This can, for instance, take the form of limited privacy or reduced opportunities for leisure activities. To counter this, a collective agreement has been entered into at the German units for employees to be provided with single accommodation at all times. Subsidized leisure activities are additionally available. Turner has wellness programs that are also open to project employees. Additionally, Turner carried out a mental health campaign on construction sites during the reporting year. Employee assistance programs at all HOCHTIEF companies provide support for employees in various life situations, such as support with childcare.

The effectiveness of these activities is measured in the companies on the basis of employee turnover. The development of employee turnover is also assessed in a decentralized manner. Under the HOCHTIEF Sustainability Plan, it serves as an indicator of the working environment and job satisfaction. Turnover rates are specified and monitored by the companies. On the basis of employee turnover, the companies take action under their own responsibility which can have a positive impact on the working environment and employee satisfaction.

Our targets

We have not yet specified any targets at present in relation to the material impacts identified. As part of their regular deliberations, an international working group of experts from the companies’ human resources departments discuss whether the actions taken need to be modified or targets formulated.

Health and safety

We are convinced that there can be a connection between mental health and a positive working environment. Such a working environment notably includes fair, safe, and healthy working conditions that support employee wellbeing and reduce stress. This is why we believe that digital disconnection (separation from the company's IT-related systems) (S1-NI2) makes a significant contribution to a positive working environment. This impact is addressed by the policies referred to in S1-1. These do not distinguish with regard to physical or mental health. Moreover, the impact relates to the health and safety of both white-collar and blue-collar workers and applies equally to both groups of employees. The impact we have identified in relation to the risk of accidents (S1-NI3) on construction sites also applies to white-collar employees deployed in projects who include site and project managers. With the above policies, we pursue a primarily preventive strategy and also act to avoid legal costs and reputational harm as a result of health and safety incidents (S1-R1).

On behalf of the Executive Board of HOCHTIEF Aktiengesellschaft, the Human Resources corporate department reviews the HOCHTIEF units' implementation of the occupational safety and health-related content of the Group directive on Occupational Safety, Health, Environmental and Climate Protection. The Human Resources corporate department also keeps the Executive Board informed, furnishing regular updates on the development of the corporate metrics specified for the HOCHTIEF Group. Responsibility for verifying compliance with the directive lies with the units and with managerial staff responsible for occupational safety, who report in turn to the Health and Safety department.

An important role with regard to fine-tuning the directive and the HOCHTIEF Sustainability Plan 2025 is played by the international Health and Safety working group, which meets on a quarterly basis. In the same forum, experts from the various functional departments for occupational safety and health and from the Human Resources corporate department discuss and contribute to ongoing efforts regarding the identified material matters, among others. This work is generally not subject to specific time horizons as we view occupational safety and health as part of a continuous improvement process with no hard deadlines.

Our actions and their effectiveness

When deciding on action to be taken, we focus on prevention and behavior-based safety (BBS). All HOCHTIEF companies conduct occupational safety training for employees in order to alert them to hazardous situations and thus prevent work accidents. Occupational health and safety management systems that are regularly certified to ISO 45001 or to similar standards help ensure that the relevant safety standards are implemented consistently in all units. The companies identify suitable preventive measures for all work areas in the course of risk analyses. These are evaluated and updated for each project.

Preventive activities during the reporting year included initiatives to promote mental health at subsidiaries Turner and CIMIC and at the German companies. Among other things, the units introduced employee assistance programs. These provide support with difficult individual family situations and with psychological stress experienced by people in connection with their employment. Moreover, Turner launched a campaign including toolbox talks at project sites to raise employees' awareness of the importance of mental health.

We want to continue analyzing the possibilities for digital disconnection (separation from the company's relevant IT systems), as we see links with mental health in this regard. However, we have not yet identified specific actions at this stage.

Protective equipment is also crucial to employee safety. In the operational units, standardized ordering processes ensure that necessary personal protective equipment is available in order to counter negative impacts such as accidents caused by tripping or falling, as well as head injuries due to falling objects at our project sites. The wearing of protective equipment also counteracts health impacts due to sun exposure, temperature extremes, dust, or exhaust fumes. At HOCHTIEF's German units, we supplemented safety provision during the reporting year with the introduction of five-point PPE (helmet, goggles, gloves, hi-vis clothing, and safety shoes).

Instruction and training is provided throughout the Group to keep employees continuously informed about occupational safety matters and to raise awareness in this regard. Additionally, employees are made aware of occupational safety issues thanks to Group-wide activities and campaigns. The focus of these campaigns varies on a regular basis. Activities include Safety Stand-Downs at Turner and an Occupational Safety and Health Day in Europe.

Since our primary target is to provide safe and healthy workplaces, implementing the above actions also helps us counteract the risk of potential compensation payments to employees as a result of workplace accidents. The effectiveness of action taken is tracked using metrics established within the Group in direct relation to the lost time injury frequency rate (LTIFR). The percentage of employees who operate under internationally recognized occupational safety certifications is also surveyed on a regular basis.

The effectiveness of the various preventive measures is verified by the safety experts in the units.

Our targets

In the HOCHTIEF Sustainability Plan 2025, we have set ourselves short-, medium-, and long-term targets to further promote a safe working environment. Our targets relate to accident-free project execution and ensuring that there are no fatalities among our own employees and subcontractors in any of our activities. These targets do not meet the MDR-T requirements of the ESRS. The above measures contribute to promoting safety in our workplaces.

We had no fatal accidents involving our own workforce in the reporting year. We report the targets referred to outside of the ESRS reporting standard. We also want to track the success of our measures based on the lost time injury frequency rate and counteract any negative effects.

In the HOCHTIEF Sustainability Plan 2025, we set short-, medium-, and long-term targets for the lost time injury frequency rate (LTIFR of own workforce) in order to reduce the negative impacts of lost-time work accidents. HOCHTIEF has accorded special importance to occupational safety matters for many years by establishing the LTIFR as the most significant non-financial performance indicator. This is an entity-specific metric that is communicated outside of the ESRS reporting (for further information, please refer to the Group structure and business activities section). Annual LTIFR targets are based on forecasting, while long-term and interim targets are specified in the HOCHTIEF Sustainability Plan 2025. These include improving the LTIFR across the Group to 1.04 by 2025, and a long-term LTIFR target of 0.9 by 2030. The LTIFR for the Group was 0.71 in the reporting year, compared to 0.66 in the prior year (for further information, please refer to the Group structure and business activities section). The target in the HOCHTIEF Sustainability Plan 2025 was thus exceeded.

Another target relates to promoting the positive impact of occupational safety certifications on the prevention and reduction of work accidents. This target is for 100% of all employees to work in an occupational safety-certified environment in accordance with ISO 45001 or with comparable internationally recognized occupational safety certifications. Data has also been collected for 2024 and 2025, as the target for these years was similarly 100%. Target achievement in 2025 was again 99.8%, following 99.8% in 2024. The underlying data was collected on a decentralized basis in the relevant operational units using the figures as of the December 31, 2025 reporting date.

Responsibility for implementing the above-mentioned targets lies with the companies in the HOCHTIEF Group.

Equal treatment and opportunities for all

Training and skills development

The expertise, dedication, and talent of our own employees are key success factors for HOCHTIEF. This makes the provision of training and skills development a major element of the policies referred to in S1-1. The HOCHTIEF Sustainability Plan 2025 provides a conceptual approach in this connection and addresses the identified material impact under the heading of “Training, talent, and recruitment” (S1-PI4).

Responsibility for implementation lies with the HOCHTIEF Group companies. Human resources experts from HOCHTIEF’s international units regularly discuss the onward evolution of the policy in a working group. This is an ongoing process.

One element of the identified material impact comprises professional development interviews. These are also used to communicate the HOCHTIEF Code of Conduct, which embodies the values underlying our conduct and emphasizes transparency, a culture of mutual trust, and equality of opportunity as important elements of our corporate culture.

Under the HOCHTIEF Code of Conduct, responsibility for implementing professional development interviews with employees lies with the managerial staff of each HOCHTIEF company. By setting the “tone from the middle,” middle management amplifies the values and requirements embodied in the HOCHTIEF Code of Conduct.

Our actions and their effectiveness

HOCHTIEF companies offer training and professional development programs to provide effective support in relation to the identified material impact. Professional development programs must meet the following efficiency requirements: Professional development programs must be aligned with the business activities in each segment. The range of professional development programs must be supplemented with seminars for managers and high potentials in order to ensure succession planning. In addition, training must be offered on environmental sustainability topics and on diversity. Rather than measuring the efficiency of professional development measures against predefined criteria, we track it on the basis of the content of each company’s professional development program. We check whether the seminar content is tailored to the needs of the companies, for example in terms of their operational business requirements. Efficiency of the action taken is additionally assessed on an individual basis in the German and American HOCHTIEF companies using feedback from program participants.

In the reporting year, various training courses with an engineering focus or focused on recent lines of business—such as data centers—were made available to all HOCHTIEF Group employees through the ACS University. As part of an ongoing process, the ACS University is also implementing special professional development programs aimed at top managers and high-potential employees. The ACS University’s Executive Leadership Program (ELP) launched in November 2024 will culminate in an in-person event in March 2026 at which participants will deliver strategic project presentations in the presence of the top management of the ACS Group companies. The ELP is for top managers within the HOCHTIEF Group.

Independently of the ESRS standard, we also promote the professional development interviews with employees through the following measures:

- In the German companies, annual structured interviews with superiors on the basis of prescribed guidelines within the HOCHTIEF Group. These interviews also cover ESG subject matter.
- Regular, two-yearly employee surveys with uniform focus on commitment and company affiliation
- Performance interviews with employees at CIMIC and Turner

The effectiveness of direct dialogue between supervisors and employees is not generally tracked by the HOCHTIEF companies. For white-collar employees, however, we track the number of professional development interviews held. The process is implemented in the Group companies as follows:

- The employee survey held at the European units includes a question on whether the afore mentioned annual interviews were conducted.
- At Turner, employee interviews held are tracked in the learning management system.
- CIMIC records employee interviews on a decentralized basis in the operational units, using forms.
- At Thiess, employee interviews are recorded using a reporting system similar to that at Turner.

Our targets

To advance the material positive impact (S1-PI4) identified, HOCHTIEF has set the short-term target of further expanding the professional development programs for engineering professions, top managers, and high potentials through the ACS University.

In addition, with the HOCHTIEF Sustainability Plan 2025, we are pursuing the medium-term target of offering special training programs for young talents to facilitate their advancement.

In the Future Lab program, the German units target high potentials from all occupational groups and managers[1] engaged in developing specific thematic clusters and task areas in order to actively support the HOCHTIEF Group's strategic development.

CIMIC offers mentoring programs to promote the development of young talent through collaboration with experienced leaders.

With regard to our further target of promoting employee training on sustainability, please refer to the relevant disclosures in the environmental section.

The aforementioned targets do not meet the MDR-T requirements of the ESRS reporting standard.

Measures against violence and harassment in the workplace

In the policies set out in S1-1, HOCHTIEF has identified the impact and the opportunity related to occupational safety and freedom from discrimination and harassment in the workplace (S1-NI4 and S1-O1).

Our actions and their effectiveness

HOCHTIEF has established a variety of communication channels to uncover and counteract potential shortcomings in the above areas at an early stage. These include the option for employees to report matters and, if they wish, to do so anonymously. Under a HOCHTIEF procedural instruction, the channels apply to all Group companies.

Responsibility for implementing the communication channels lies with the HOCHTIEF Group companies as part of their own compliance management systems. Managers in Group companies liaise regularly with Corporate Compliance in order to respond to developments and make adjustments as necessary.

[1] These groups are defined by the companies and are subject to the potential assessments in the respective units.

HOCHTIEF has specified further measures that will take effect in the short and medium term. This action is primarily preventive in nature, aiming to proactively minimize risks and prevent actual violations. Anti-discrimination training is offered throughout the Group and is mandatory in the European units as part of the e-learning module on the Code of Conduct. Under a zero-tolerance policy, HOCHTIEF follows up every tip-off and potential violation, and analyzes them for possible consequences in terms of employment law and compensation law.

HOCHTIEF provides positive incentives in order to motivate employees to report, voluntarily and without coercion, any suspicion of violence or harassment in the workplace. This is communicated, for instance, in training courses and in the rules of procedure for the HOCHTIEF whistleblower system, as well as in personal discussions with Corporate Compliance. Questions about employees' willingness to report matters were included in the 2024 employee survey. The findings did not show any need for improvement in 2025.

The HOCHTIEF Code of Conduct encourages all HOCHTIEF employees to be proactive and to report potential compliance violations, as this makes it possible to mitigate or prevent potential impacts or harm. Employees do not face any penalty or reprisal within the company for complying with the law and the provisions of the Code of Conduct.

We also see the implementation of the measures described above as an opportunity to combat unequal treatment and harassment and thus become a more attractive employer for qualified professionals. This enables us to improve output and productivity, and thus increase earnings.

Our targets
At present, we have not set any targets in relation to the material impact. We consider the action taken to be sufficient.

S1-6
Characteristics of the undertaking's employees

The data reported below is taken from HOCHTIEF's standardized annual reporting. Quantitative data collection is based on various human resources information or payroll accounting systems at Group companies. The aggregated data is collected using standardized questionnaires and compiled centrally on a quarterly or annual basis, in accordance with the intra-year reporting cycle. The total number includes white-collar employees, blue-collar employees, apprentices, work-study students, and interns. Exceptions to the total number of employees are listed below the tables.

Total employees[1] by head count and gender as of December 31, 2025

With regard to the number of employees reported in the financial statements, please refer to the average number of employees (61,304.75).

Gender	Number of employees (head count)	White-collar employees	Blue-collar employees
Male	50,929	21,532	29,397
Female	10,589	8,309	2,280
Other	1	1	0
Not reported	–		
Total employees	**61,519**	**29,842**	**31,677**

[1] The total number includes white-collar employees, blue-collar employees, apprentices, work-study students, and interns. Apprentices, work-study students, and interns are categorized as white-collar and blue-collar employees as appropriate.

Note: The underlying data was collected on a decentralized basis in the relevant operating companies.

Number of employees in countries where the undertaking has at least 50 employees representing at least 10% of its total number of employees, as of December 31, 2025

Country	Number of employees (head count)
Australia	**19,391**
USA	**14,102**
India	**11,724**
Indonesia[1]	**4,630**
Germany[1]	**3,654**

[1] Country not subject to the criteria of the reporting standard as it employs less than 10% of HOCHTIEF's total workforce.

Note: The underlying data was collected on a decentralized basis in the relevant operating companies.

Employees by contract type, broken down by gender (head count) as of December 31, 2025

Number of employees (head count)	Female	Male	Other[1]	Not disclosed	Total
Number of employees (head count)	10,589	50,929	1	0	**61,519**
Number of permanent employees (head count)	9,687	34,919	1	0	**44,607**
Number of temporary employees (head count)	902	16,010	0	0	**16,912**
Number of non-guaranteed hours employees (head count)	327	1,729	0	0	**2,056**

[1] Gender as specified by the employees themselves.

Note: The underlying data was collected on a decentralized basis in the relevant operating companies.

Information on employees by contract type, broken down by region[1] (head count) as of December 31, 2025

Number of employees	Americas	Australia-Oceania	Asia	Europe	Total
Number of employees (head count)	15,279	19,505	19,987	6,748	**61,519**
Number of permanent employees (head count)	15,051	17,235	6,112	6,209	**44,607**
Number of temporary employees (head count)	228	2,270	13,875	539	**16,912**
Number of non-guaranteed hours employees (head count)	6	2,050	0	0	**0**

[1] Regions relate in all cases to continents. The number of non-guaranteed hours employees corresponds to a subset of employees with permanent and temporary contracts and thus does not represent a third subgroup of the total number.

Note:The underlying data was collected on a decentralized basis in the relevant operating companies.

Employee turnover (exits) 2025

	Number of employees
Exits	**14,467**

Note: The underlying data was collected on a decentralized basis in the relevant operating companies and includes all commercial, engineering, and blue-collar employees with a permanent employment contract. Employees with temporary contracts who left voluntarily or due to dismissal, retirement, or death in service, are also included in the exits. The total exits figure includes employees who left voluntarily and exits due to dismissal, retirement, or death in service.

Rate of employee turnover 2025[1]

	%
Turnover rate	**23.6**

[1] Number of exits (employees leaving voluntarily and exits due to dismissal, retirement, or death in service)/reporting year average head count

Note: The underlying data was collected on a decentralized basis in the relevant operating companies.

The turnover rate reflects our segments and workforce structure. In contrast to 2024, the number no longer includes exits of temporary employees. In 2024, the departure of temporary employees at the regular end of their employment was counted as a relevant reason for leaving and such exits were hence included in the numerator. This has been corrected in line with ESRS and temporary employees leaving at the regular end of their employment are no longer included in the numerator. We have also changed the methodology for the denominator compared to 2024 and now use the average number of employees. Conversely, in the prior year, we used the opening head count as the denominator. The corrected figure for 2024 is 23.5% (originally 40.2%).

In addition, we have adjusted the data basis compared to the prior year with regard to blue-collar CIMIC employees in India as this group of employees qualifies as temporary workers. In 2024, they were counted as permanent employees.

S1-8
Collective bargaining coverage and social dialogue within the EEA

Reporting on collective bargaining coverage and social dialogue

	Collective bargaining coverage	Social dialogue
Number of employees	Employees—EEA (for countries with >50 employees representing >10% total empl.)	Workplace representation (EEA only) (for countries with >50 employees representing >10% total empl.)
Coverage rate	Not applicable (see notes)	Not applicable (see notes)
0-19%		
20-39%		
40-59%		
60-79%		
80-100%		

Notes:
No European Economic Area (EEA) country in which HOCHTIEF has a presence meets the criterion for the ESRS reporting standard of more than 50 employees and more than 10% of the total workforce.
The underlying data was collected on a decentralized basis in the relevant operating companies.

HOCHTIEF has a European Works Council as required by law. An additional agreement on representation by the European Works Council has not been concluded.

S1-9

Diversity metrics

The gender distribution at top management level and the age distribution among employees are presented in the following. The information in relation to top management level (senior management positions) relates to the first and second reporting level below corporate management in each company.

Proportion of employees at top management level (senior management positions) in the HOCHTIEF Group as of December 31, 2025

	Number of employees (Reference: SP 2025)[1]	% (Reference: SP 2025)[1]	Number of employees	%
Total	707	100.0	740	**100.0**
Men	579	81.9	617	**83.4**
Women	128	18.1	123	**16.6**

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Note: The underlying data was collected on a decentralized basis in the relevant operating companies.

Employees by age interval in the HOCHTIEF Group as of December 31, 2025

	Number of employees
under 30 years	**15,423**
30 - 50 years	**33,294**
over 50 years	**12,801**

Notes:
Table does not include the “other” category (one employee).
The underlying data was collected on a decentralized basis in the relevant operating companies.

S1-10

Adequate wages

100% of employees are paid adequate wages.

Note: The underlying data was collected on a decentralized basis in the relevant operating companies. The calculation basis corresponds to the definitions in the ESRS reporting standard.

S1-12

Persons with disabilities

Employees with disabilities by gender as of December 31, 2025

	%	Employees in the Americas and Europe
Total	5.3	**21,426**
Men	4.7	**16,297**
Women	7.1	**5,129**

Notes:
The disclosures are made subject to legal restrictions on the collection of data. Employees in Australia and Asia are not legally required to disclose their disability status, which is why the quota relates solely to the companies in the Americas and Europe.
Variations in local law were taken into account when collecting the data. For example, the processes for recognizing a severe disability in Germany differ from the processes in the USA. In the USA, all levels of impairment are taken into account.
The underlying data was collected on a decentralized basis in the relevant operating companies.

S1-13

Training and skills development metrics

Employees who participated in regular performance and career appraisals, broken down by gender (%)

	%
Total	**47.0**
Men	**41.3**
Women	**74.2**

Notes:
The underlying data was collected on a decentralized basis in the relevant operating companies.
White-collar employees take part in regular performance and career appraisals. This is often not the case for blue-collar employees. The percentage nevertheless relates to all employees. See table under S1-6, "Total number of employees by head count and gender", ("White-collar employees" and "Blue-collar employees" columns).

Average number of training hours per employee by gender in 2025

	2025 (Reference: SP 2025)[1]	Average number of training hours
Total	23.1	**23.8**
Men	23.2	**24.2**
Women	22.6	**21.6**

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Notes:
Training hours for blue-collar employees are not recorded in the companies' learning management systems. The underlying data was collected on a decentralized basis in the relevant operating companies. In relation to blue collar workers (Turner, CIMIC, and Thiess), the following calculation methodology was used for estimation: extrapolation for the training hours. The above-mentioned extrapolation is based on mandatory occupational safety training at the operational units of Turner, CIMIC, and Thiess. The total figure was extrapolated from the number of blue-collar employees and the duration and frequency of the mandatory training.

In addition, the following assumptions were made: At Turner, the total number of training hours was weighted by gender based on the average number of employees; for Engineering and Construction in Germany, training hours for salaried and blue-collar employees that were not recorded in the central learning management system were extrapolated based on the duration of the corresponding training measure and the number of employees involved.

S1-14

Health and safety metrics

	2025 (Reference: SP 2025)[1]	%
Percentage of employees who are covered by the undertaking's health and safety management system based on legal requirements and/or recognized standards or guidelines	99.8	**99.8**

[1] The companies Thiess and Dornan are not included in the disclosures in accordance with the Sustainability Plan 2025, as they were not part of the HOCHTIEF scope of consolidation when the Sustainability Plan was adopted in 2021. Flatiron is still included in reporting in accordance with the Sustainability Plan 2025 as it was part of the HOCHTIEF scope of consolidation in 2022.

Notes:
The underlying data was collected on a decentralized basis in the relevant operating companies using the figures as of the December 31, 2025 reporting date.
The reported standards for occupational health and safety management systems (ISO 45001, VCA, or AMS Bau) are certified by accredited institutions such as BSI Group or DQS GmbH.

Work-related accident and illness metrics

	Number/rate
Number of fatalities as a result of work-related injuries and work-related ill health	**0**
Number of fatalities as a result of work-related injuries and work-related ill health with regard to workers in the value chain	**1**
Number of recordable work-related accidents[1]	**283.1**
Rate of recordable work-related accidents	**2.28**
Number of cases of recordable work-related ill health	**51**
Number of days lost due to work-related ill health[2]	**1,009.5**
Number of days lost due to work-related injuries and fatalities[3] from work-related accidents	**5,077.4**

[1] With regard to the number of recordable work-related accidents, we refer here to all work-related accidents that led to an injury and subsequent medical treatment (total recordable cases/TRC). These are shown in the above table.
[2] Due to legal restrictions on data collection for Engineering and Construction, the days lost are based on an assumption derived from a health report produced by a health insurance company ("Gesundheitsreport – Arbeitsunfähigkeit 2025"). This also forms the basis for the assumption of days lost at CIMIC. The methodology was changed compared to 2024 based on the above assumptions. Due to legal restrictions on data collection at Turner, no lost days can be recorded for notifiable work-related illnesses.
[3] Fatal work accidents are recorded at HOCHTIEF if the fatality does not occur on the day of the accident.

Notes:
The underlying data was collected on a decentralized basis in the relevant operating companies.

S1-15

Work-life balance as of December 31, 2025

The percentage of own employees entitled to take family-related leave (maternity leave, paternity leave, parental leave, and carers' leave), and the percentage of entitled employees that took family-related leave (by gender) are presented in the following.

In the European units, all employees are entitled to family-related leave by law.

Employees entitled to family-related leave as of December 31, 2025

	Number of employees	Share of total number of employees[1]
Entitled employees	61,518	100%

[1] The percentage relates to employees entitled to maternity and parental leave in accordance with local law in each country.

Note: The underlying data was collected on a decentralized basis in the relevant operating companies.

Family-related leave taken in the HOCHTIEF Group in 2025

Number of employees	Women	Men	Number of employees
Total[1]	1,303	3,827	5,130
Maternity and parental leave	410	1,241	1,651
Nursing care leave	893	2,586	3,479

[1] With regard to the information on maternity leave and parental leave, it should be noted that we have a high proportion of predominantly male blue-collar employees; see S1-6. As a percentage of the total number of eligible employees, 12.3% of women and 7.5% of men took family-related leave, corresponding to 8.4% of the total workforce.

Note: The underlying data was collected on a decentralized basis in the relevant operating companies.

S1-16
Remuneration metrics (pay gap)

Gender pay gap in the HOCHTIEF Group in 2025

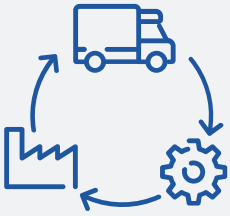
	%
Gender pay gap[1]	-11.5

[1] Calculation for each gender: gross total of the remuneration components of all employees divided by the corresponding sum total paid hours (including leave and public holidays, in accordance with local arrangements). The resulting hourly rates by gender are then used in the following ratio: 100% (average gross hourly pay level of male employees minus average gross hourly pay level of female employees, divided by average gross hourly pay level of male employees times 100). The gross total of the remuneration components of all employees from the payroll results for the entire year; employees who joined or left during the year are included with their actual gross total and corresponding paid hours.

Notes:
Definition of remuneration components: fixed salary, payments under collective agreements, variable components -> STIP, LTIP, gratification, bonuses, incentives
The underlying data was collected on a decentralized basis in the relevant operating companies. The gender pay gap indicator must be viewed in the context of the employee structure (see S1-6 Employees by gender) and the regional locations of the HOCHTIEF units (see S1-6 Employees by region). The pay gaps shown in the table are mainly due to the fact that, because of the Group's diverse activities, skilled workers with different specializations and seniority levels work at different locations.
Further points to note include an 18.9% larger proportion of male blue-collar employees compared to 2024 and the fact that the workforce is concentrated in Australia and Asia.
The calculation methodology has changed compared to 2024: In 2025, paid hours were used as the divisor, thus removing the need to use an assumption in the reporting year as was done in the prior year.

S1-17
Incidents, complaints, and severe human rights impacts

In the reporting year, 82 cases of discrimination and 403 grievances on other topics were received via the HOCHTIEF whistleblower systems. Complaints include all complaints received by HOCHTIEF, including from external contact points. There were no material fines, sanctions, or compensation payments in connection with confirmed incidents. No severe human rights incidents (forced labor, human trafficking, or illegal child labor) were identified in the reporting year. Hence, there were no related fines, sanctions, or compensation payments. The underlying data is collected decentrally in the respective operating companies.



ESRS S2
Workers in the value chain

This section contains disclosures on HOCHTIEF's material IROs related to workers in the value chain. In our double materiality assessment, we have identified three impacts in this area (IROs S2-PI1, and S2-NI1 to S2-NI2). These IROs, which relate to our business activities, are listed in the IRO table the ESRS 2 section, together with disclosures on their location in the value chain, time horizon, and the nature of impacts. Disclosures on the directives and frameworks referred to in this section are also to be found in the ESRS 2 section.

Approach, policies, and processes

We expect our business partners in the upstream and downstream value chain to comply with ethical principles in their business activities. For us, this also means that they recognize social responsibility toward their workers.

This is the basis for our policies, which we have formulated in our binding Code of Conduct for Business Partners.

The actual and potential impacts of our strategy relate to workers in the upstream and downstream value chain and to workers in our own operations.

Workers in the value chain

Our disclosures relate to the following workers, who may be affected by the material impacts relating to our own operations and the value chain, as well as by products, services, and our business activities:

1. People who work for entities in the upstream value chain or in our own operations at our operating locations but who are not part of the HOCHTIEF workforce, i.e., who are not self-employed workers or workers provided by third-party undertakings primarily engaged in employment activities.

2. People who work for HOCHTIEF in the upstream value chain in the production or supply of products relevant to our activities (such as steel, concrete, timber, cement, aggregates, asphalt, and glass).

3. People working for entities in the downstream value chain (e.g., employees of subcontractors engaged with clean-up or disposal work after project completion).

4. Workers who (within the prior categories) are particularly vulnerable to negative impacts, such as trade unionists, young workers, or women.

We do not distinguish between the above groups in relation to the material impacts we have identified, as the impacts can affect all workers equally regardless of specific characteristics or circumstances.

S2-1

Our policies are based on our business activities. These include construction, construction management and other services on projects and in service units. Value chain workers are also deployed in this connection. Hence, these workers contribute to our business success. Their interests, views, and rights inform our policies. The Code of Conduct for Business Partners is based on internationally recognized frameworks that explicitly require respect for fundamental human and labor rights. This approach ensures that the interests of our subcontractors' employees—in particular their right to safe and fair working conditions—are systematically taken into account.

We ensure that the interests, views, and rights of value chain workers inform our strategy by pursuing the following strategic approaches within the HOCHTIEF Group:

- In our Human Rights Statement of Principles, HOCHTIEF commits to making commensurate efforts to avoid adverse impacts on the human rights of individuals involved in our global operations, such as our value chain workers. Both in the Statement of Principles and in the Group directive on Human Rights Governance, we take account of internationally recognized standards—in particular, the UN Guiding Principles on Business and Human Rights, the ILO Core Labour Standards, and the OECD Guidelines for Multinational Enterprises—and describe our due diligence processes for the active prevention of human rights violations. The Statement of Principles was adopted by the Executive Board and is being implemented under the responsibility of the specialist departments of the Group companies.

- HOCHTIEF requires all joint venture partners and subcontractors (collectively "business partners") to provide their employees with a safe and healthy working environment. Business partners are obliged to have procedures in place to identify and evaluate health and safety risks in the context of their activities and to prevent, detect, and mitigate those risks. This policy is set out in the HOCHTIEF Human Rights Statement of Principles and is also enshrined in our HOCHTIEF Code of Conduct for Business Partners. All Group companies are thus required to make reasonable efforts to respond, in accordance with that directive, to human rights matters such as incidents and potential violations. In the event of any risks and/or violations, business partners are called upon to communicate them to HOCHTIEF and work with HOCHTIEF to seek suitable solutions. This includes disciplinary measures against employees or third parties, as well as the possibility of compensation for any harm incurred by those affected. The HOCHTIEF Code of Conduct for Business Partners was adopted by the Executive Board and is implemented under the responsibility of each business partner.

- In addition, under our Code of Conduct for Business Partners and the Group directive on Occupational Safety, Health, Environmental and Climate Protection, our business partners along the value chain are required to enable their employees to work safely and, to that end, provide them with the necessary equipment. The Group directive on Occupational Safety, Health, Environmental and Climate Protection was adopted by resolution of the Executive Board and is also being implemented under the responsibility of the Group companies.

- We reject all forms of human trafficking, forced labor, and illegal child labor. This policy is documented in the HOCHTIEF Code of Conduct for Business Partners. Remedial action is detailed in the previously mentioned Group directive on Human Rights Governance and the Code of Conduct for Business Partners. In Europe, our Procurement Directive additionally addresses the policy regarding suppliers and subcontractors from high-risk countries.

- We want to help ensure that adequate remuneration policies are applied also to workers along the value chain. This strategic approach is set out in the HOCHTIEF Code of Conduct for Business Partners. Our business partners must are responsible for ensuring that their employees' wages and benefits are fair and comply with applicable national and local laws as well as with contractual agreements.

- Our commitment to a working environment free of discrimination likewise includes value chain workers. The Code of Conduct for Business Partners requires business partners to oppose any form of discrimination, bullying, or harassment. They are required, within the scope of prevailing law, to commit to preventing all forms of discrimination, bullying, or harassment as well as to ensure equal treatment and equal opportunities for employees, applicants, and business partners. Furthermore, they are called upon to create an atmosphere of respectful mutual relations and to counteract any direct or indirect discrimination.

- Occupational safety and health training is a prerequisite for safe working. The Code of Conduct for Business Partners includes the requirement for our business partners to train their employees sufficiently before they start work.

S2-2

We engage with value chain workers mainly through representatives, as direct engagement would generally be highly involved and time-consuming. In this connection, we take account of the material positive and negative actual or potential impacts of our activities in relation to working conditions as well as other work-related rights.

HOCHTIEF implements the following processes:

- We regard the following HOCHTIEF departments and experts as representatives of these employee groups: the Procurement and Occupational Safety and Health departments. These departments have processes and procedures that also cover value chain workers.

- Procurement ensures that, across all units, business partners acknowledge the Code of Conduct for Business Partners. In this way, Procurement, as a key player in project execution, makes an important contribution to ensuring the mitigation of any potential negative impact of our business activities on material working conditions for value chain workers.

- In each Group company, prequalification must be obtained with regard to occupational safety, health, and environmental protection before any contract is awarded. This prequalification is also a requirement of the ISO 45001 standard. The results are critical to the contract award decision and the ongoing working relationship with a contractor.

- As part of ESG risk management, Procurement works with external partners in supplier selection to support a supply chain risk analysis with regard to ESG matters. Part of this process is a media screening, which identifies and evaluates published information both on risks and on violations related to the payment of wages as well as the health and safety of workers along the value chain. The process is applied in the European units.

S2-3

HOCHTIEF uses due diligence processes to counter identified risks and/or violations of the standards of the Code of Conduct for Business Partners. These due diligence processes are provided for in the above-mentioned Code of Conduct. HOCHTIEF thus relies on communication, transparency, and the readiness of our business partners to collaborate in remediating negative impacts.

In the event that negative impacts for value chain workers arise within the Group, we have established the following processes and channels to raise concerns and report matters in relation to their working conditions:

- Continuous process as part of HOCHTIEF's Human Rights Corporate Management System: In an annual assessment, we identify the human rights risks arising in our business activities that may also impact value chain workers. Under the Group directive on Human Rights Governance, the managements of Group companies are responsible for ensuring that functional departments are appropriately involved in the human rights and environmental risk analysis in order to identify, assess, and prioritize such risks and that they take action to implement the human rights principles and prevent human rights risks. In fulfilling these responsibilities, they are supported by the corporate departments and/or functions of their company. We consider this approach to be effective, as it follows a mandatory, formalized process.

- Whistleblower systems that allow concerns to be openly raised with HOCHTIEF, on both a centralized and a decentralized basis, via an online platform, a hotline, or email: These provide a direct channel for value chain workers to raise concerns and report issues. Submissions can also be made anonymously and we assure whistleblowers full protection against any reprisals. In a formalized process, HOCHTIEF companies ensure that all issues reported are carefully investigated and appropriately dealt with so that suitable remedial measures can be taken. The process similarly provides for whistleblowers to be involved in follow-up and to receive feedback. Reported matters continue to be worked on until they are classified as resolved. Access is facilitated by making the whistleblower systems publicly known, accessible, and transparent. Whether value chain workers are aware of the systems and trust in them is assessed on a decentralized basis in the operating companies and is not tracked centrally as this is the responsibility of the companies themselves. At HOCHTIEF Infrastructure GmbH, value chain workers on projects in Europe are additionally informed about the whistleblower system by means of fliers containing QR codes.

An external surveillance audit, conducted for the third year running, led in the 2025 reporting year to certification of the European HOCHTIEF companies to ISO 37002 (Whistleblowing management system).

Actions and targets

S2-4 I S2-5

Since identifying and assessing potential negative impacts on workers in the value chain is an ongoing process, we are continuously developing our approaches. In doing so, we pay particular attention to appropriate actions to prevent and mitigate potentially material negative impacts and initiatives that can create additional positive effects.

Working conditions

Adequate wages

The prerequisite for fair pay is the payment at all times of the applicable minimum wage under local law.

Our actions and their effectiveness

In German units, legal requirements stipulate that workers in the subcontractor chain must be paid appropriately, that means, they must receive the statutory minimum wage. To this end, HOCHTIEF companies request confirmation from these employees that they are being paid the minimum wage. At the European level, the effectiveness of the fair remuneration concept is reviewed through project- and branch-related audits, which are conducted at least twice a year on the basis of interviews.

The Dornan companies that joined the Group in the reporting year have not yet been audited. Moreover, in our European units, we already carry out risk-based extended prequalification for suppliers from countries with an increased risk of human rights violations according to a United Nations assessment. Fair wages payment practices are recorded in the respective questionnaire. The aspect of adequate wages also features in contract negotiations in the European units and human rights risk analysis within the Group. In addition, it is regularly addressed in various training formats.

We are not yet able to verify the effectiveness of our actions Group-wide.

Though, our actions are openly communicated through regular publication in our Group reports. With this transparency, we want to set an example and in this way contribute in the short and medium term to encouraging our business partners across the Group to also review and, if necessary, adjust their pay structure with a view to ensuring adequate wage levels. Please refer to the information in the Own workforce section under S1-4/S1-5: Working conditions—Adequate wages. In collaboration with the HOCHTIEF companies, we intend to develop additional methods to verify and ensure the even greater effectiveness of our policy in the future.

Our targets

We aim to promote the payment of adequate wages throughout the value chain to an even greater extent. However, we have not yet formulated any targets as we wish to further assess the implementation of the activities described above.

Health and safety

In terms of strategy, the matter we have identified as material (S2-NI1) follows from the Group directive on Occupational Safety, Health, Environmental and Climate Protection and the HOCHTIEF Code of Conduct for Business Partners. In addition, under our Code of Conduct for Business Partners, our business partners along the value chain are required to enable their employees to work safely and, to that end, provide them with the necessary equipment. We operationalize the policies set out under S2-1 with the core focal area that we have identified: occupational safety risks from potential accidents at our contractors (S2-NI1). In addition, the HOCHTIEF Sustainability Plan 2025 addresses strategic focus areas aimed at improving occupational safety performance (the accident frequency) for value chain workers.

Our actions and their effectiveness

More than 99% of HOCHTIEF projects are delivered in accordance with certified occupational safety and health management systems. These apply also to our business partners.

Value chain workers are briefed on project-related safety and health hazards as well as operating procedures before starting work.

Where multiple contractors are underway in parallel on a construction site, safety coordinators must be engaged in addition to the usual safety experts. In this way, we aim to rule out overlapping hazards.

Occupational safety risks are preferably minimized by technical and organizational means. Next, based on risk assessments, personal protective equipment (PPE) specified at the start of a project is supplemented as needed with specific items such as fall prevention equipment. Hence, protective equipment geared to project requirements has a positive impact on health and safety. In order to create a safe working environment, it may also be necessary to supplement technical and organizational protective measures with PPE. Where contractors are supported in the provision of PPE, instruction is given on the proper use of the equipment.

Construction projects carry a high risk of accidents. That means precise analysis of potential hazards before commencing work is of paramount importance. Contractors identify trade-specific risks as part of risk analysis. Where necessary, HOCHTIEF conducts supplementary project-specific risk analyses. HOCHTIEF works closely with contractors to ensure that they take all project-specific hazards into account in their risk analyses. Occupational safety documents such as risk analyses, assembly instructions, and proof of instruction are submitted to HOCHTIEF by contractors at the commencement of project execution.

Additionally, occupational safety matters are discussed in regular project meetings, attendance of which is mandatory for contractors. In this way, we have implemented an approach at our German units for training employees of our business partners in order to further promote our preventive occupational safety standards.

At Turner and CIMIC, mandatory occupational safety training is provided for subcontractor employees. Participation is compulsory.

On-site implementation is verified in regular inspections by safety experts, construction managers, project managers and, where applicable, safety coordinators. In some countries, local occupational safety law requires public inspectorates to take part in health and safety inspections.

Our targets

Our short-, medium- and long-term target is accident-free project delivery and to have no fatalities among subcontractors in all our activities. These targets are not reported in accordance with the ESRS. They are also enshrined in the HOCHTIEF Sustainability Plan 2025. We are fully aware that accidents always cause suffering and, according to severity, can have far-reaching consequences for the family and friends of the victims as well as for others working on the project. It is irrelevant to distinguish here between own workers and value chain workers.

In 2025, there was one fatality among subcontractors. This makes it all the more important for us to have formulated the improvement of the accident rate at our contractors—by way of more training and increasing health and safety awareness—as a medium-term qualitative target in our Sustainability Plan 2025. While we did not engage with value chain workers or their representatives in setting this qualitative target, it is publicly and thus transparently communicated. Since we currently do not have a complete overview of the contractor level, we have not yet been able to set target values for the target progress. We are currently tracking the development of this topic with Turner and CIMIC for the subcontractors directly commissioned by the companies.

Other work-related rights

We are committed to a policy of keeping a particularly close watch for potential human rights violations in the procurement of materials from high-risk countries (S2-NI2). The policies set out under S2-1 make reference to this. Human rights due diligence obligations, such as the avoidance of child and forced labor, must be complied with.

Our actions and their effectiveness

HOCHTIEF has implemented a comprehensive, multi-level risk management process in procurement. This is designed to identify social and environmental sustainability risks as well as violations at an early stage and to mitigate these through suitable prevention and remedial measures—such as targeted training—in dialogue with the respective business partner. This risk management process covers various factors, including a contractual obligation to comply with our HOCHTIEF Code of Conduct for Business Partners, supplier self-assessments, sustainability assessments by external partners, monitoring of global media, and internal assessments after completion of performance. The outcomes of the individual risk management steps are included in our supplier and subcontractor selection process. When procuring services and materials from high-risk countries, there is an elevated risk of corruption and human rights violations. That is why, in Europe, we carry out enhanced prequalification for the relevant suppliers that is tailored to the respective risk areas.

HOCHTIEF endeavors to work primarily with local suppliers and subcontractors based in the vicinity of our project sites. In this way, we aim to ensure short transportation distances and strengthen local economies.

The inclusion of ESG criteria and clauses in our supply chain management—for example, by requiring adherence to the Code of Conduct for Business Partners or training on ESG matters—we promote sustainable practices, cooperation, and shared interests in the economy.

Managing suppliers and subcontractors is the responsibility of the procurement departments at the operating companies.

Our targets

We have not set any quantitative targets yet as we aim to coordinate our targets in the context of our international business activities with the HOCHTIEF Group companies.

ESRS S3
Affected communities

This section contains disclosures on HOCHTIEF's material IROs related to affected communities. In our double materiality assessment, we have identified five impacts in the area of affected communities (IROs S3-PI1 to S3-PI3 and S3-NI1 to S3-NI2). These IROs are listed in the IRO table in the ESRS 2 section, together with disclosures on their location in the value chain, time horizon, and the nature of impacts. Disclosures on the directives and frameworks referred to in this section are also to be found in the ESRS 2 section.

Approach, policies, and processes

Dialogue with the community; responsibility

Our business is a people business as it brings us into close contact with numerous stakeholder groups. This means that stakeholder involvement—whether relating to individuals or groups—plays an important role at HOCHTIEF. We are in constant dialogue with a wide range of stakeholder groups and constructively address their various demands to take these into account in our work. Our aim here is to systematically track and give strategic consideration to major requirements and expectations in our processes. This is why we engage with stakeholders and invite them to contribute actively in various ways. Stakeholders who live in the vicinity of our projects and are directly affected by our activities in the public arena are of particular importance in this regard. Since we share responsibility also for their safety, we strictly comply with legal requirements for their protection.

Affected communities

With projects that we carry out in the heart of society, our contracting work is the basis of our strategy for engaging with affected communities. This brings us into close contact with communities who are potentially or actually affected by the impacts of our business activities—particularly in terms of their views, interests, and rights. Wherever we work, our activities impact the economic, social, and cultural rights of the local communities potentially or actually affected by our projects.

Our impact on affected communities results from our business models and generally extends beyond the duration of construction and project execution—especially when our work involves modifying infrastructure and thus local surroundings on a lasting basis or where we assume the long-term operation of a project.

Affected communities include:

- Residents in the vicinity of our projects
- In the USA, Canada, and Australia, this includes Indigenous peoples

Our strategy for engaging with affected communities follows from our business models. In accordance with our business models, the information, engagement, and consultation process in relation to affected communities commences right from the planning phase—especially in cases where HOCHTIEF companies operate as contractors for a project under a contract. Fundamental questions about planned structures and their impact on affected communities are generally clarified in advance as part of the statutory approval process. We are committed to communicating transparently and providing community stakeholders with all necessary information about each project and its impact.

In our business activities, we aim as a matter of policy to implement projects that benefit affected communities by, for example, improving infrastructure and the local economy.

S3-1

Protecting affected communities is a key concern at HOCHTIEF and we are committed to executing all projects such that they are safe for people and ideally benefit the community. HOCHTIEF's strategic approach and management of material matters and impacts related to the economic, social, and cultural rights of affected communities and their safety are set out in the following cross-cutting HOCHTIEF Group directives and policies (for further information, please refer to ESRS 2 under Directives and frameworks; this includes information on scope, accountability, and impact on the value chain).

The following directives constitute the framework for managing material matters related to affected communities across the Group and aid the implementation of identified IROs.

- Donations and Sponsoring: Donations and sponsorship activities support the implementation of impacts in relation to HOCHTIEF's social engagement.
- Social Engagement: Through our corporate citizenship activities—including donations and sponsorships—we aim to help improve the economic situation of people in need and contribute to the safe development of infrastructure for affected communities. In addition, the Social Engagement directive is the basis for engagement with Indigenous groups. Local law additionally applies as a binding basis for engagement with Indigenous communities.
- In accordance with the above policies, HOCHTIEF concentrates its sponsorship activities on two focal areas: "educating and promoting young talent" and "designing and preserving living spaces." The two focal areas are also in line with United Nations Sustainable Development Goals 4 (Quality Education) and 11 (Sustainable Cities and Communities).
- Occupational Safety, Health, Environmental and Climate Protection: The requirements of this directive apply from the planning phase onward and hence also relate to construction site safety. As a fundamental policy document, it addresses the material impact in relation to construction site safety within its scope of application. At the same time, it complements our strategic commitment to improving quality of life and advancing sustainable development in communities.
- Human Rights Governance: This specifies obligations at a fundamental level to respect and monitor human rights and stipulates efforts to actively prevent human rights violations by means of due diligence processes. Part of the policy is the stipulation that Group companies take remedial action in the event of violations.

The following HOCHTIEF frameworks also apply:

- The management systems at operating companies contain stipulations regarding construction site safety.
- The Human Rights Statement of Principles expressly addresses matters and processes in relation to affected communities.
- The HOCHTIEF Sustainability Plan 2025 is a binding Group-wide framework.
- Through mandatory implementation of the HOCHTIEF Code of Conduct and the HOCHTIEF Code of Conduct for Business Partners, we lay down binding standards for business partners to ensure that our employees as well as our subcontractors and business partners respect the rights of third parties in areas such as human rights and the environment.
- The Group strategy published regularly in HOCHTIEF's financial and Group reports determines the businesses in which HOCHTIEF operates.

These guidelines are binding throughout the Group, and their implementation is mandatory in the companies of the HOCHTIEF segments. All directives contain clear and unambiguous specifications and process descriptions for monitoring compliance.

Our Australian Group companies also have specific inclusion plans for Indigenous peoples, which complement the Group directives and guide the teams in CIMIC's project activities in Australia.
Additionally, CIMIC Group companies CPB Contractors, UGL, Sedgman, and Thiess have Reconciliation Action Plans to encourage Indigenous people to take part in and benefit from local training, employment, and business opportunities.

These plans also cover the development of partnerships with Indigenous people's organizations and businesses to foster supplier diversity, actively promote appreciation of Indigenous cultures, and support inclusion. The action plans aid in complying with legal requirements such as the New South Wales Aboriginal Procurement Policy and the Infrastructure Legacy Program, as well as with specific customer requirements regarding the inclusion of Indigenous groups.

At Turner in the USA, one focus of the social inclusion activities is promoting supplier diversity. With its nationwide Turner School of Construction Management, the company offers free courses for small and underrepresented businesses. Participants build long-term relationships, establish networks, and learn how to position their businesses in the market. The Community and Citizenship team at Turner is responsible for promoting economic and professional participation, supporting social initiatives at project sites, and building long-term partnerships with local community organizations. In Canada, Clark Builders has a Progressive Indigenous Relations Strategic Plan that addresses the needs of Indigenous people in communities. An Indigenous Relations Working Committee develops proactive plans, practices, and policies. The Committee's mandate is to promote activities across the following areas: Indigenous cultural awareness, education, and respect within Clark Builders; recruitment, training, and mentoring of Indigenous team members; project development support and realization for Indigenous community infrastructure needs; inclusive and supportive procurement practices for capacity building with Indigenous community subcontractors and suppliers; and development of long-term Indigenous community partnerships and sustainable economic development opportunities.

S3-2

We seek constructive dialogue with communities as well as their legitimate representatives and proxies in order to engage with them. In this connection, we take account of material positive and negative actual or potential impacts of our activities.

This allows us to promote quality of life and sustainable development in communities through our business activities as well as through donations and volunteer activities.

Protection of community interests with regard to construction site safety in urban areas is, in contrast, generally governed by law. This includes requirements on public safety, restrictions on unauthorized access, structural inspections, and the exclusive use of officially approved construction materials. Consultation on issues relating to

construction site safety in communities is usually conducted via authorities and local governments or the building owner.

HOCHTIEF applies the following processes for inclusion:

- Adherence to legally required, democratically based stakeholder participation processes—for example, in the context of plan approval procedures. These are generally completed long before the actual contract award to a construction company or joint venture. It is only in subsequent processes—in a competitive dialogue procedure, for instance—that companies are able to become involved in complex publicly tendered contracts.
- Early contractor involvement contract models, in which the parties work together from an early stage with stakeholders in the surroundings of a project, are standard practice at HOCHTIEF and actively contribute to risk management, including in contracting work for the private sector.

The processes referred to are always project-specific and vary in terms of the project phase, nature, and frequency of engagement. Generally, operating in consultation with the client, a HOCHTIEF company enters into regular dialogue with affected communities when it becomes an active party to a project. Responsibility for this process lies with the management of the subsidiaries concerned.

As engagement with communities in the planning, approval, and execution phases, as well as on safety matters, is already comprehensively provided for by law, HOCHTIEF does not have a general process or specific requirements for engaging with special groups. For instance, it must be ensured that people can safely pass construction sites and that no unauthorized persons have access to them. Responsibility for implementing construction projects in terms of safety lies with the management of our units.

HOCHTIEF uses a range of project- and situation-specific channels and formats for communication purposes. These include information events, direct communication for residents, websites and social media channels, press releases, and stakeholder dialogues. In this way, we specifically reach out to affected and interested stakeholders and their representatives, inform them, and receive, analyze, and respond to their feedback. Communication channels such as our whistleblower system are accessible at all times. This can be used to submit tip-offs, suggestions, and grievances. We follow up on all issues raised in a formalized process and where necessary develop measures to provide lasting remedy.

Particularly at our subsidiaries in the USA and Australia as well as increasingly in Europe, community managers liaise between the company concerned, clients, business partners, and local stakeholders. They maintain direct contact with stakeholders, hear concerns, and have them addressed in the company. Community managers fine-tune the strategy for engaging with stakeholders and the community. This includes the establishment of two-way communication. Community managers chair information and engagement events and respond to concerns. Lessons learned in the process are passed on to project management, clients, and supervisory authorities. Close cooperation with communities leads to local initiatives on the part of our subsidiaries or project teams, which we generally implement with locally established non-profit organizations.

We also regularly contribute around our sites with donations, sponsorship, and volunteering projects. These activities are likewise organized on a decentralized basis at HOCHTIEF, with the operating companies having their own budgets for the purpose. The operating companies coordinate the activities with the responsible management, and the HOCHTIEF Executive Board is involved in projects that span the entire Group. In our community work, we attach special importance to long-term partnerships based on the needs and perspectives of the local population.

In view of HOCHTIEF's project-based business and the markets in which we operate, Indigenous peoples are the sole group at present for whom special provisions and measures for particularly vulnerable groups apply.

In our activities in Australia, the USA, and Canada, we already take into account the special rights of Indigenous groups as stakeholders where possible in the run-up to our projects. This includes respecting their right to free, prior, and informed consent. This takes place in close consultation with clients and covers matters relating to cultural, intellectual, religious, and spiritual property, lands, and territories, as well as relevant legal and official

requirements. Special-purpose project plans are thus compiled in many cases for construction projects undertaken by CIMIC Group companies.

By way of example, these plans provide for the hiring of Indigenous workers or the inclusion of Indigenous groups in procurement processes. At CIMIC Group company CPB Contractors, for instance, this purpose is served by the CPB Contractors Aboriginal Business & Social Enterprise (ABSE) database. In Canada, Clark Builders applies inclusive procurement practices in capacity building among Indigenous subcontractors and suppliers. The company is a member of the Canadian Council for Indigenous Business's (CCIB) Aboriginal Procurement Champions Group and has achieved the CCIB Bronze Partnership Accreditation in Indigenous Relations. The free, prior, and informed consent of Indigenous groups is ensured by compliance with legal requirements.

Our subsidiaries' teams are generally involved in the implementation of these initiatives. This additionally includes the observance of specific, culturally significant days of the year, festivals, and rituals, and the protection and preservation of cultural sites of significance to Indigenous peoples. In this connection, the HOCHTIEF companies maintain direct contact with representatives of the various Indigenous groups in order to ensure ongoing engagement.

S3-3

As a matter of policy, we seek to avoid negative impacts on affected communities wherever possible.

Regarding the material, negative potential impact identified by HOCHTIEF with regard to safety concerns of communities when building in urban areas (S3-NI1), we apply existing processes where necessary to remediate or help remediate any impacts.

- Safety impacts are constantly monitored and evaluated in our occupational safety management system. We systematically analyze any incidents to identify suitable measures to prevent future impacts.
- Group-wide expert exchange promotes best practices in construction site safety.
- Our whistleblower systems also allow external stakeholder groups to communicate concerns directly to us on a decentralized basis via various channels, including online platforms, hotlines, and email addresses. The availability of these systems is supported by the companies' IT systems. This is a service offering; we do not track awareness of it. Submissions can be made anonymously if desired, and we assure full protection against any reprisals. Information received is examined and processed in a structured process, and suitable remedial action is developed and implemented. Whistleblowers receive feedback upon request and are involved in the subsequent process. Cases are not closed until a solution has been found.

With regard to the identified material, negative potential impact due to insufficient protection of Indigenous rights through lack of participation (S3-NI2), HOCHTIEF applies the following procedures:

- Implementation of and adherence to the specific Reconciliation Action Plans at CIMIC Group companies
- Inclusive employment and training programs
- Involvement of local companies by providing employment opportunities

To furnish clear and comprehensive information to all affected communities—including Indigenous groups—and ensure their participation and promote sustainable community development, we implement the following processes:

- Continuous process as part of HOCHTIEF's Human Rights Corporate Management System: We identify the human rights risks arising in our business activities that may impact stakeholders, including affected communities.
- Accessible whistleblower systems for the reporting of all concerns and matters by external groups, as described above.

  An external surveillance audit was once again successfully conducted in the reporting year and resulted in certification of the European HOCHTIEF companies.

Actions and targets

S3-4 I S3-5
Communities' economic, social, and cultural rights

Socioeconomic conditions of local communities; security-related impact

Our activities also give rise to positive impacts in our communities (S3-PI1 and S3-PI2), specifically in the form of
- an improved and sustainable environment for communities through, for example, the provision of modern transportation infrastructure or state-of-the-art educational, medical, and cultural amenities,
- promotion of young talent and professional training within communities, and
- social projects that actively contribute to securing communities in everyday life.

Inadequately secured urban construction sites can also adversely affect the socioeconomic conditions of local communities and lead to negative impacts—including accident risks for surrounding communities (S3-NI1). We aim to make construction sites safe for all nearby stakeholders and passers-by.

Our actions and their effectiveness

Our work with affected communities focuses on the needs and concerns of people in the vicinity of each project. We take the following specific action to this end:
- Verification of construction site safety—for example, through regular inspections
- Application of expert knowledge in the field of occupational safety and health in site meetings with safety professionals
- Use of innovative digital processes in areas such as construction logistics to help ensure safe and predictable construction progress and thus also prevent potential negative impacts on communities
- Implementation of community outreach programs for inclusive employment and contracting opportunities
- Implementation of local initiatives with organizations in the vicinity, many of which grow into longstanding partnerships
- Funding projects based on donations and sponsorship
- Volunteering by employees in the vicinity of our projects and branches or offices

In this connection, we regularly invest funds as a permanent partner in a cross-cutting volunteering and Group sponsorship project with the Fika NGO (formerly Bridges to Prosperity (B2P)). These activities come under our sponsorship focus "designing and preserving living spaces." In employee volunteering projects, we build bridges in remote regions in order to give people safe and better access to key infrastructure such as schools, hospitals, and markets. Within this collaboration, HOCHTIEF specifically aims to support people in regions where the Group itself does not operate. Through our business activities and social corporate citizenship, which also includes donations and sponsorship, we can not only improve the economic situation within communities, but also make infrastructure safer. As an example, this is highlighted by the cross-cutting Fika project.

Donation and sponsorship activities at HOCHTIEF are organized on a decentralized basis in line with the structure and project-driven geographical spread of our subsidiaries. The operational entities have their own budgets for social activities, which they coordinate with management. Volunteering activities are also generally organized on a decentralized basis. HOCHTIEF's Executive Board is involved in all cross-cutting projects at Group level.

Activities in connection with construction site safety are implemented in the short to medium term, depending on project duration. Their effectiveness is likewise tracked at project level in the course of construction. This is the responsibility of management in each case. Checks, inspections, and safety walks by safety officers on construction sites allow the effectiveness of the actions to be verified. Occupational safety and health experts work together with the teams that design and implement our projects to ensure project safety at all times. By deploying these human resources, HOCHTIEF contributes significantly to the safety of communities. Depending on the project, safety measures may also be specified in collaboration with other parties such as joint venture partners.

Social engagement activities are generally implemented also on a decentralized basis. Their effectiveness is measured according to the type of activities involved, but is not tracked at a higher level due to their largely decentralized nature. We make sure our activities are effective by using processes that allow us to swiftly identify and address negative impacts. The provision of resources for dedicated community management by staff specialists is one example of a direct, measurable contribution to successful engagement and sustainable development with regard to affected communities; donation and sponsorship budgets are another.

We use in-house training—on topics such as the HOCHTIEF Code of Conduct—and targeted awareness-raising campaigns to make our employees more aware of human rights issues, including with regard to the rights of affected communities. These activities pave the way for systematically pursuing the continuous development of our social responsibility.

No action in relation to severe human rights incidents impacting affected communities or individual stakeholders was necessary in the reporting year because no incidents were reported.

Our targets

We do not specify any quantitative or qualitative targets at present in relation to the identified material impact concerning construction site safety on Group level.

Individual quantitative and qualitative targets are frequently set as part of our project activities. Based on the cross-cutting Group directives, these address sustainability matters. The effectiveness of the activities for target achievement and performance measurement are tracked on a decentralized basis at project level. Potential areas for improvement are also identified locally. On account of this local approach, the activities are not aggregated or evaluated at Group level.

In the HOCHTIEF Sustainability Plan 2025, we had set ourselves the medium-term Group-wide target of increasing our donations and sponsorship budget by 3% annually from 2022 to 2025. While the budget for 2024 without—Thiess and Dornan—was approximately EUR 6.4 million on a comparable basis to the Sustainability Plan, the budget for 2025 was approximately EUR 6.7 million based on the scope of consolidation in the reporting year. We focus on activities within our funding priorities that promote SDGs 4 and 11. Our subsidiaries decide on the appropriation of funds as part of their decentralized stakeholder management approach as well as in accordance with the Group directives. We have not yet set any further targets since the end of the reporting year.

Additionally, we had set the further medium-term qualitative target of promoting employee volunteering campaigns on SDGs 4 and 11 across the Group by 2025; this target also relates directly to affected communities. We are focusing here on our companies in Europe, where corporate volunteering is not yet a long-established part of the corporate culture. The activities are tracked qualitatively via an internal Group-wide reporting system.

Our international corporate working group continued its activities in 2025 for the improvement of data collection on the impacts of our actions. Now that the 2025 plan horizon has ended, we will identify any potential improvements in light of the content of the new Sustainability Plan.

Rights of Indigenous peoples

Free, prior, and informed consent

Our actions and their effectiveness

Negative impacts can arise through failure to involve and inform local communities (S3-NI2), which could negatively impact the rights of Indigenous peoples. Group companies CIMIC and Turner implement various actions to counter this.

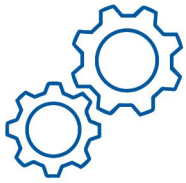
Our companies in Australia and North America maintain a constant and active focus on effective communication and engagement with Indigenous groups (S3-PI3). These communication-based initiatives help identify the action needed to effectively address negative impacts. Actions already established in the reporting period and with a short- to medium-term time horizon include:

- Partnerships with Indigenous organizations that support Indigenous participation in employment and business opportunities, such as CareerTrackers, the Clontarf Foundation, and Supply Nation at CIMIC
- Provision of skills and employment programs that improve the professional qualifications of the Indigenous population and facilitate access to the labor market
- Creation of opportunities to support and encourage participation in local sports and cultural activities
- Creation of opportunities for Indigenous suppliers to participate in contracting projects
- Information and cultural awareness training for Group employees
- Implementation of mandatory Reconciliation Action Plans for engagement with Indigenous groups
- Implementation of corporate inclusion policy for Indigenous groups by community managers in the United States

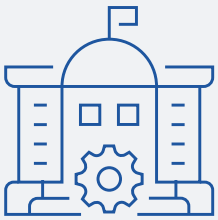
Here, too, effectiveness is measured according to the type of activities involved, but is not tracked centrally due to their decentralized nature. Scope for improvement is also identified on a decentralized basis.

Our targets

With the above project-specific activities, we aim to ensure that local communities are involved and well-informed. Consequently, we have not set any targets in this regard. We intend to continue our work with Indigenous groups in the established manner.



Governance information



ESRS G1
Business conduct 2025

This section contains disclosures on HOCHTIEF's material IROs related to governance. In our double materiality assessment, we have identified 11 impacts (G1-PI1 to G1-PI5 and G1-NI1 to G1-NI6), three risks (G1-R1 to G1-R3), and one opportunity (G1-O1). These IROs are listed in the IRO table in the ESRS 2 section, together with disclosures on their location in the value chain, time horizon, and the nature of impacts. Disclosures on the directives and frameworks referred to in this section are also to be found in the ESRS 2 section.

Approach and policies

Governance and compliance are key to delivering on our corporate principles at HOCHTIEF. Through appropriate measures, including training and process improvements throughout the Group, we aim to avoid breaches of applicable law and corporate policies as well as the associated risks and consequences, and to increase awareness of proper conduct among all employees.

G1-1

HOCHTIEF's business conduct is value-driven and based on our guiding principles: We stand for integrity, accountability, innovation, delivery, and sustainability. The guiding principles serve as a roadmap. They demonstrate the values that inspire how we act at HOCHTIEF—in our daily work, both internally and externally. We promote our corporate culture among the workforce through targeted training, particularly on the value-oriented content of the HOCHTIEF Code of Conduct. Furthermore, we regularly update our training programs to ensure a high level of acceptance of our corporate culture among all employees.

HOCHTIEF has implemented a tax directive across the Group to improve its tax transparency. Further information on the directives and frameworks referred to is provided in the ESRS 2 section. The global orientation of the HOCHTIEF Group also calls for a focus on global strategic goals in terms of taxation, such as avoiding inequality between countries when taxes are not paid at the locations where the actual economic activity takes place (G1-NI3). This strategic orientation is intended to secure the Group's continued existence as a going concern (G1-PI1).

The development of our Group-wide Code of Conduct, involving all segments, is the result of regular intra- and interdepartmental workshops and of the harmonization of our corporate culture. Internal and external audits and certifications in the European and U.S. segments likewise help to review our corporate culture. CIMIC addresses any resulting recommendations that are of relevance there.

Involving the various segments in fostering the corporate culture—through the Code of Conduct, for example—helps us maintain a success-driven approach. Backed by its experience, technical excellence, and innovative solutions, HOCHTIEF realizes projects worldwide that our clients find compelling and that benefit society (G1-PI3). In doing so, we make efficient use of existing resources. Our employees' knowledge, dedication, and motivation pave the way for our success. In return, HOCHTIEF offers them secure and challenging jobs. Part of this is the financial stability in the business activities carried out by HOCHTIEF, which serve as the basis for the workforce's activities. In this way, the HOCHTIEF Group generates sustainable earnings while at the same time creating value for its shareholders (G1-PI3 and G1-NI1).

As a global infrastructure group, HOCHTIEF operates in countries with differing social and legal systems. Risks and business practices vary as a result. As a matter of course, we uphold applicable international agreements such as those on the protection of human rights, anti-corruption, and sustainability (G1-PI3).

The Compliance management system (CMS)

Corporate Compliance has developed a preventive compliance management system (CMS) with targeted measures to effectively prevent rules violations. This lays the groundwork for the CMS systems deployed at the remaining operating companies (such as Turner and CIMIC). The CMS addresses the focus areas of anti-corruption, antitrust law, anti-money laundering, prevention of terrorism, commercial criminal law in general, and human rights due diligence. Its structure is based on the IDW PS 980 auditing standard issued by IDW, the Institute of Public Auditors in Germany, and on international standards ISO 37301 and ISO 37001. The CMS also incorporates the ten Principles of the United Nations Global Compact.

Overall responsibility for compliance lies with the CEO of HOCHTIEF Aktiengesellschaft, who is supported in this regard by the Chief Compliance Officer and Corporate Compliance. The compliance officers/managers each report on a regular basis to the Chief Compliance Officer, who in turn reports once annually to the Supervisory Board Audit/Sustainability Committee. Upholding our compliance requirements is the responsibility of all managerial staff and employees.

Our aim is to establish good, successful, long-term business relationships. Due-diligence reviews are conducted throughout the Group before entering into business transactions. In Europe, Corporate Compliance screens potential joint venture partners in a clearly defined selection process. Approval is additionally subject to integrity and competition law criteria. The other segments also use IT-assisted programs to support the business partner screening process. The CMS covers not only our own employees but also the value chain. This is reflected, for example, in the grievance mechanism, which is accessible for and can be used by all third parties and is a key element in the proper functioning of the CMS. A stakeholder analysis ensures that the CMS takes account of stakeholder engagement (G1-PI4).

The HOCHTIEF Code of Conduct is the central element of our CMS. The code clearly and concisely sets out our binding rules of conduct and applies globally to all HOCHTIEF Group employees (G1-O1). For instance, HOCHTIEF adheres to the anti-corruption principles published by international organizations such as the International Chamber of Commerce and Transparency International.

HOCHTIEF is also a longstanding member of the UN Global Compact, whose tenth principle deals with working against corruption. The HOCHTIEF Code of Conduct provides guidance for our business activities. In keeping with our guiding principle of integrity, HOCHTIEF introduced its first Code of Conduct as early as some 20 years ago. The Code of Conduct represents the Group's values and underscores management's commitment to operating in conformity with the law, rules, and regulations. This expectation applies to all HOCHTIEF Group companies. The HOCHTIEF Code of Conduct, which was already updated in 2024, was developed and coordinated by Corporate Compliance within the HOCHTIEF Group companies in an extensive consultation process and approved by the entire Executive Board. It thus serves as an overarching umbrella for all HOCHTIEF Group companies, which in turn have implemented their own codes of conduct. Corporate Compliance has drafted and communicated various directives to elaborate on the values and requirements set out in the HOCHTIEF Code of Conduct. They are communicated as a rule on the HOCHTIEF intranet and through bilateral coordination processes.

Whistleblower management

HOCHTIEF implemented a whistleblower management system several years ago, which encompasses a case management system as well as a grievance mechanism. The grievance mechanism provides various reporting channels. In 2021, this grievance mechanism was supplemented with a web-based whistleblower system that is available both internally and externally to employees and third parties. This is subject to ongoing refinement and revision in line with the whistleblower protection legislation (G1-R1). When a whistleblower report is received, it first undergoes a plausibility review and the necessary measures are then taken to investigate.

If allegations are substantiated, they are presented to the Compliance Committee, which draws its membership from various specialist functions. The selection of functions represented on the Compliance Committee ensures that there is a good basis for consultation on any issues that may arise. A set of rules of conduct for the Compliance Committee covers topics such as its composition, its specific role in investigating matters, and ensuring an independent investigation in the event of personal involvement. For Europe, the Corporate Compliance investigator in each matter is organizationally separate from the management chain involved in order to ensure independence. The Compliance Committee consults on the course of action to be taken.

In a globalized economy, companies bear responsibility both within their own operations and along their supply chains. This includes complying with legal obligations and avoiding risks, such as corruption, violations of competition laws, and environmental and human rights violations. HOCHTIEF is committed to ensuring that no human rights violations occur at any of our Group companies or at any of our suppliers or business partners (G1-PI4).

Other reporting channels are available in addition to the digital system. Furthermore, an external attorney has been retained for several years now as ombudsman to receive tip-offs, complaints, and concerns. The ombudsman can be contacted both from within Germany and from abroad (G1-PI5). Concerns can additionally be raised in person with Corporate Compliance, the relevant compliance managers, Corporate Auditing, or the respective superior (G1-NI2).

Another pillar of the CMS is employee training. For the European units, regular training is provided, explaining the details of the reporting channels as well as how whistleblower reports are handled and investigated. All information is additionally available to employees on the intranet. This information is also contained in the HOCHTIEF Code of Conduct e-learning program, which is rolled out annually for HOCHTIEF in Europe. To ensure that they can handle reports appropriately and competently, case managers in the European units receive targeted internal and external training. Case managers are individual members of staff at Corporate Compliance and the compliance managers of the various units. There are significantly fewer case managers in total than compliance managers. This ensures that as few people as possible have knowledge of whistleblower reports.

Whistleblowers are fully protected against any reprisals. HOCHTIEF does not exert any pressure, coercion, or reprisals against whistleblowers or against anyone else who contributes to promoting compliant behavior at HOCHTIEF, and exercises zero tolerance of such actions by third parties. The same applies to threatened or attempted reprisals. HOCHTIEF protects all whistleblowers who do not report false information willfully or with gross negligence against direct and indirect reprisals of any kind based—however remotely—on the whistleblower's report. We ensure that no one incurs any disadvantage in the company or in business transactions for acting in compliance with the rules. All information on the rules of procedure for the HOCHTIEF whistleblower system is publicly available on the website and, in the case of European units, on the intranet. The HOCHTIEF whistleblower system is available in numerous languages and meets the requirements of Directive (EU) 2019/1937.

HOCHTIEF follows up on and investigates all whistleblower reports submitted. We have procedures to investigate business conduct incidents promptly, independently, and objectively—including incidents of corruption and bribery. Case managers investigate all matters in compliance with the procedural principles of confidentiality, anonymity, presumption of innocence, and protection against reprisals. Whistleblowers receive a confirmation of receipt within seven days at the latest, except in the case of reports submitted in the web-based system, which confirms receipt upon submission.

A whistleblower can speak at any time with the responsible case manager or with other persons involved by Corporate Compliance. This provides an opportunity to discuss the facts of the case and expectations regarding prevention and remedial measures, including the possibility of amicable dispute resolution. HOCHTIEF notifies whistleblowers of the status of the matter and action taken within three months, provided that this does not compromise internal investigations or the rights of persons concerned. Other functional departments are involved wherever this is deemed expedient to conducting a full investigation.

Functional departments that handle non-compliance-relevant whistleblower reports decide independently on follow-up action, in compliance with the procedural principles. They keep Corporate Compliance abreast of the state of proceedings by way of regular written information. In the case of whistleblower reports submitted anonymously using the web-based system, communication with the whistleblower is conducted exclusively with Corporate Compliance using a secure mailbox. The above information can be found in the HOCHTIEF Whistleblower System Rules of Procedure, on the Europe-wide HOCHTIEF intranet as well as in the investigation manual for internal use in the European companies. The other operating companies maintain corresponding intranet pages to ensure communication of their whistleblower systems.

All whistleblower reports received are treated identically, irrespective of the subject matter. First, a plausibility review is conducted. A check is then made whether information is already available on the matter, such as from prior whistleblower reports. If a matter is compliance-relevant, Corporate Compliance takes over the investigation and initiates appropriate action. The results are discussed in the Compliance Committee, as described above under "Compliance management system." Specific recommendations for (follow-up) action are presented at this stage. Finally, the relevant management decides what recommended action to take. Any necessary adjustments to the CMS—such as more frequent checks—are initiated, implemented, and communicated by Corporate Compliance. The adjustments are incorporated into training and thus passed on to training participants.

If a whistleblower report relates to Corporate Compliance itself, Corporate Auditing handles the investigation. This avoids any conflict of interest. The Chief Compliance Officer, together with the Head of Corporate Compliance and the Chief Human Rights Officer, reports once annually to the Supervisory Board Audit Committee via the Compliance Report. This report also contains information on whistleblower reports received, the related investigations, and action taken. The Executive Board is likewise provided with regular compliance briefings which include information on reported matters.

Operational implementation: Training

HOCHTIEF believes that diverse training formats are an important tool for improving corporate management and strengthening corporate culture (G1-NI6). Corporate Compliance has developed a comprehensive training policy for the European units. This determines the topics to be covered—such as the HOCHTIEF Code of Conduct, antitrust law, human rights aspects, or data protection—and the training intervals (weekly, annually, biennially, or as the need arises). The policy also specifies the risk groups to be trained (for instance, all active employees, or employees with heightened antitrust risk) together with the training formats (online, e-learning, or classroom-based). It is reviewed annually at the beginning of each year and updated as necessary. Moreover, the policy defines at-risk groups and functions, i.e. groups and functions particularly susceptible to specific risks such as corruption and bribery. Comparable training programs are also established at the operating companies.

Functions-at-risk are those functions deemed to be at risk of corruption and bribery as a result of their tasks and responsibilities, where there are instances of actual or potential contact with third parties that present active and passive bribery opportunities. To take local differences into account, this definition also includes similar departmental and function names (such as Purchasing, Managing Directors, or Senior Management). One hundred percent of functions-at-risk received training in the designated cycle through various training modules, such as Code of Conduct e-learning, specific training for high-risk functions, and similar.

The core component of the training concept is e-learning on the Code of Conduct at each unit. All employees are required to complete this training[1]—irrespective of their job and risk profile. Completion is tracked and documented on the e-learning platforms on a specific cut-off date. The training takes about 45 minutes and covers all core topics of the Code of Conduct (such as bribery and corruption, data protection, human rights). This training takes place annually, and every two years at CIMIC. At CIMIC, the e-learning courses on the Code of Conduct are supplemented by additional specific training courses for high-risk functions.

Risk-specific training—on antitrust law or conduct during searches—is subject to a preliminary risk-based review.

Cybersecurity

A particular risk may arise for our clients and business partners with a negative impact on their right to information security and cybersecurity (G1-NI4).

Cybersecurity policies and actions

Cybersecurity is part of our IT strategy and is embedded in our IT Directive by way of the Information Security Policy. The policy approach is likewise publicly documented in our information security guidelines. These frameworks have been approved by the Executive Board of HOCHTIEF Aktiengesellschaft. They are mandatory throughout the Group and their implementation is binding for all HOCHTIEF companies. In implementing policies and actions, HOCHTIEF adheres to the requirements of ISO 27001 and thus the requirements for a structured information security management system (ISMS). The policies and actions are continuously fine-tuned in consultation with the relevant stakeholders (such as our own workforce, business partners, and clients). Positions, committees (such as the IT Steering Committee), and processes (such as for exception requests and concept approval requests) have been established to this end. These ensure that all requirements (relating, for example, to operations, investment spending, or information security) are addressed in a structured manner, taking the material impacts into account. We use the following processes for this purpose:

[1] Every active white-collar employee (does not include blue-collar employees, interns, and inactive employment relationships (in the case, for example, of parental leave, sabbatical, or long-term illness)).

- Consideration of clients and business partners in information security management
- Risk assessment and risk minimization in supply chain management
- A defined process for designing, implementing, and updating a risk-appropriate and cost-effective information security policy
- Communicated processes for risk evaluation in the case of policy exception requests
- Implementation monitoring for security measures
- Fail-safe provision

Implementation is tracked by processes to monitor the specified actions (IT monitoring).

We focus on prevention to counteract risks. The first line of defense at HOCHTIEF is security by design. This involves the use of technical measures where the implementation process ensures a safe working environment on the basis of system design or configuration. Where recourse is made to organizational measures, these are subject to structured, documented procedures backed up with checks and balances. The measures are flanked by technical analysis systems.

Employee training on cybersecurity is also geared to common and current threats.

Lessons learned from emerging developments are continuously incorporated into internal security objectives and/or the Information Security Policy.

Initiatives implemented throughout the Group in the reporting year to protect against cybersecurity risks include the following:

- Structured requirements-management processes, including the management of information security risks (check list, involvement of specified departments, risk assessment, etc.)
- In-house phishing campaign to identify specific action such as a need for employee training
- Automated and manual penetration tests to detect security vulnerability in Internet-facing systems
- Mandatory training for all employees on general information security topics, plus ad-hoc information in the form of newsletters and intranet articles on current threats
- Continuous automated detection of vulnerabilities in Internet-facing systems, with reporting to support structured response processes
- Patch management on the basis of structured technical and organizational processes
- Attack detection and tracking solutions in operation
- Attack surface minimization by using technical measures for global blocking of entry points
- Use of technical means to minimize access to recognized and permitted systems or identities (for example, conditional access or MFA)
- Assessment of cybersecurity risks extended to include business-critical suppliers and business partners
- Structured reporting of business-critical security incidents

G1-3
Preventing corruption and bribery

HOCHTIEF has developed various processes to prevent incidents of corruption or bribery as far as possible. These include a binding Anti-Bribery Directive and mandatory awareness training. Corporate Compliance monitors adherence to compliance requirements by means of regular compliance and audit checks at branches and projects. Some of these audits are carried out with the involvement of the Data Protection Officer; in some cases, joint audits are conducted in cooperation with Corporate Auditing. Projects and branches are selected for audit on a risk basis. Audit planning is conducted annually.

A cornerstone of preventing and detecting corruption and bribery at HOCHTIEF constitutes diverse training programs coupled with the HOCHTIEF whistleblower system (for details, please refer to section G1-1).

The Code of Conduct e-learning courses mentioned above also cover corruption and bribery, among other topics. HOCHTIEF considers this training to be so important that all employees must complete it annually (every two years in the case of CIMIC), irrespective of their job and risk profile. Corruption and the prevention of bribery are key topics. To ensure that all employees are aware of the special gravity of these topics, the e-learning platforms in the Group companies each track statistics as per a specific cut-off date. The topics of corruption and bribery prevention are likewise covered in training delivered by other methods.

The Executive Board and the Audit Committee of the Supervisory Board of HOCHTIEF Aktiengesellschaft are briefed on compliance issues at least once a year via the Compliance Report. In the event that cases of corruption or bribery are identified, relevant information is provided to the Executive Board and the Supervisory Board Audit Committee in the Compliance Report. This information is additionally presented in a meeting of the Audit/Sustainability Committee. Furthermore, the Executive Board and Supervisory Board are kept apprised by the Chief Compliance Officer of HOCHTIEF Aktiengesellschaft of any additional discussion points, changes in the compliance landscape, emerging topics, or regulatory requirements that need to be met. No further training courses were held.

This includes briefings for the Executive Board and the Supervisory Board on the implementation of the HOCHTIEF whistleblower system supporting the investigation of any allegations of corruption and bribery.

G1-4
There were no convictions for corruption or bribery offenses in 2025 (G1-R3).

On the basis that a former CIMIC employee back in 2010 failed to take reasonable precautions to ensure that information provided to directors of CIMIC was not misleading, on January 29, 2026, such former CIMIC employee has been ordered to pay a penalty of AUD 1,000 on a single count (for more details please see the Risks and opportunities section).

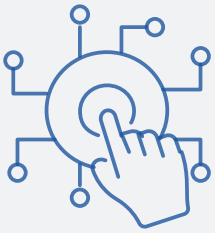
HOCHTIEF implements measures against corruption and bribery throughout the Group. These include business partner screening, anti-corruption training, and contractual clauses. The measures are intended to minimize the potential risk of fines and reputational damage (see above). Nevertheless, the CMS is subject to an annual effectiveness review to identify risk areas and, if necessary, implement appropriate measures. The aim here is to prevent corruption and bribery violations, as well as any prosecutions (G1-R2).

G1-6

Due to the various different legal systems in which HOCHTIEF operates and its heterogeneous business structure, there are no standard payment terms across the HOCHTIEF Group (G1-NI5). The various segments are thus able to meet the legal requirements in their respective jurisdiction. The benchmark is the HOCHTIEF Code of Conduct and the Code of Conduct for Business Partners, which require fair treatment of business partners. Individual segments have also implemented (standard) payment terms of their own in their general terms and conditions or policies. HOCHTIEF does not yet intend to develop Group-wide standard terms of payment. All payment practices—HOCHTIEF does not distinguish between SMEs and other partners—continue to depend on negotiations and contractual terms.

Each business unit also has processes in place to prevent late payments in various forms. For the European units, due dates are entered in SAP and tracked in a workflow. This serves as the basis for ensuring timely payment. The Group takes an average of 16 days to pay an invoice from the date when the contractual or statutory term of payment starts to be calculated. This total figure reflects the number of days taken to pay at each Group company weighted by the companies' respective shares of Group sales. The figures for the number of days taken to pay at CIMIC and Turner are based on extrapolation from extensive sampling.

There are no legal proceedings currently outstanding for late payments across the Group.



Innovation and digital transformation

In our double materiality assessment with regard to the company-specific matter of innovation and digital transformation, we have identified three impacts (H1-PI1 to H1-PI2 and H1-NI1) and one opportunity (H1-O1). These IROs are listed in the IRO table in the ESRS 2 section, together with disclosures on their location in the value chain, time horizon, and the nature of impacts. Disclosures on the directives and frameworks referred to in this section are also to be found in the ESRS 2 section.

Approach and policies

Significant strategic relevance of innovation and digital transformation

We harness innovation and digitalization to drive change in our businesses. This is why digital transformation of our activities plays a pivotal role for HOCHTIEF, offering tools and technologies that enhance efficiency, sustainability, and quality across the entire value chain. Digital twins, for example, enable detailed and resource-efficient planning and execution. This optimizes the utilization of resources in both the planning and construction phases as well as in the later phase of use, maintenance, and deconstruction/end-of-life. Advanced technologies such as Internet of Things (IoT) sensors, telematics, and analytics aided by artificial intelligence (AI) further enhance our processes, reducing costs and enabling the creation of smarter, more environmentally friendly projects. Another important goal is to improve occupational safety and health. We harness digital tools to cover safety aspects in the various project phases in order to identify risks and hazards at an early stage and take preventive action. This lets us create safer conditions for our employees and project partners. Digital solutions play a crucial role in promoting the circular economy, facilitating the reuse of materials, and enabling the design of structures that are easier to repurpose, disassemble, and recycle at the end of their life cycle.

Collaboration is key to driving this digital transformation. The early involvement of HOCHTIEF as a contractor combined with strong collaboration with clients and other parties involved in our projects enables the creation of innovative, customized solutions that address specific project challenges. By fostering a cooperative approach, we can accelerate the adoption of sustainable practices, mitigate risks, and find innovative solutions. This approach also presents an opportunity to shape the future of the industry and society. HOCHTIEF is committed to driving change in our industry by developing innovative approaches, contributing to research initiatives, and collaborating with other market players.

Innovation and digital transformation in the HOCHTIEF Group

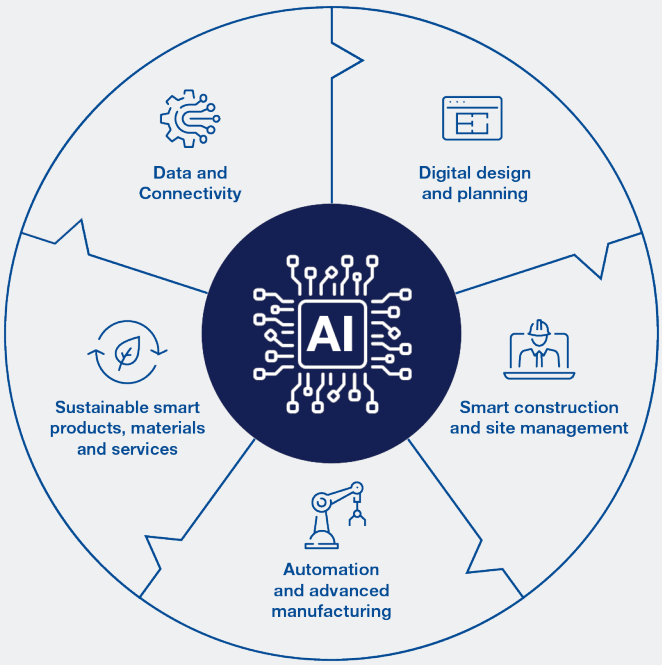
HOCHTIEF is committed to a forward-looking strategy that addresses impacts on environmental, social, and governance (ESG) aspects while capitalizing on opportunities and managing risks. This approach is designed to secure a long-term competitive edge and drive sustainable goals across the entire value chain. Besides cooperation, innovation and digitalization are the integral enablers of the HOCHTIEF Sustainability Plan 2025, unlocking opportunities and facilitating a successful transformation.

The HOCHTIEF Sustainability Plan 2025 spans the entire life cycle—from project planning, design, and construction to operation, maintenance, and end of life. This 360-degree approach is relevant to all business activities and markets, integrating innovation and digital transformation in all project phases in order to enhance efficiency, sustainability, and stakeholder value.

Objectives of innovation and digital transformation

As a leading global provider of engineering-led, end-to-end infrastructure solutions in North America, Australia, and Europe, with a presence in fast-growing strategic markets such as the AI, digital, and technology sectors, HOCHTIEF has the capability to implement and drive innovation within its projects and across the industry. Digital solutions and technologies have a positive impact on sustainability by, for example, enhancing occupational safety and the traceability of construction materials.

This helps drive decarbonization and establish more efficient processes across the entire project life cycle. Collaboration with all stakeholders paves the way to executing and running projects reliably, economically, and sustainably. By incorporating these innovations, HOCHTIEF hones its own competitive edge and unlocks new areas of business. In this way, the company contributes to the transformation of the construction and infrastructure industry toward greater sustainability, resilience, and future-readiness.



Organization of innovation and digital transformation at HOCHTIEF

Strategy is the responsibility of the HOCHTIEF Executive Board; implementation is coordinated closely with the operational units. Specific innovation work is directly embedded in project activities at HOCHTIEF, ensuring an optimum response to the needs of our clients and other stakeholders. This lets us address project-specific challenges with the best possible solutions, drawing on the experience and expertise of our operational units. Implementing innovation calls for management commitment, a structured, systematic approach, and the willingness to invest. Innovation is driven by all our employees and we aim to empower them to innovate where they work. We actively involve our partners in fine-tuning our activities.

Our subsidiary Nexplore is increasingly gaining traction as an independent digital solutions provider. In the area of virtual construction, demand for processes such as digital twinning and Building Information Modeling (BIM) is expected to continue increasing rapidly until they become a benchmark in the future. Nexplore is charged with incorporating such processes into suitable use cases and construction projects. The digital processes already provide insights and knowledge in the planning phase that help pinpoint potential challenges and mitigate risks. They serve to precisely forecast a project's life cycle and plan the work and processes involved, thus generating sustainable added value. In the area of BIM, we have already established HOCHTIEF ViCon, a unit of HOCHTIEF Engineering, as a leading provider of virtual construction services.

We work both centrally and regionally with partners in science and research as well as with industry peers to promote issues of importance to our sector. As an active member of the European Network of Construction Companies for Research and Development (ENCORD), HOCHTIEF engages in future-focused sectoral dialogue.

An Innovation Group comprising members from across the Group enhances coordination and implementation, while working groups on areas such as Machinery, Materials, Health and Safety, and Supply Chain share best practices and develop solutions. We systematically promote innovation by actively seeking collaboration with start-ups and successfully adopting their solutions. Furthermore, we work in industry-wide R&D networks comprising partners from science, research, and industry to advance the most innovative approaches and incorporate them into our processes.

Looking ahead, innovation and digital transformation will be the remit of a newly established corporate department. This will focus on transforming information and communication technology systems, developing AI solutions for the Group and the infrastructure industry, and delivering efficiency gains with lasting added value. The aim is to accelerate the digital transformation across the Group and create a more connected, efficient, and future-proof organization.

Actions and targets

The main measures being put into action are described in the following. These are representative of all business activities in the HOCHTIEF Group. Due to their project focus, the actions presented do not have a clear end point, but are deployed continuously in HOCHTIEF's operating regions over the short-, medium-, and long-term time horizons referred to in the ESRS 2 section. They address all innovation and digital transformation-related impacts, risks, and opportunities identified as material for the HOCHTIEF Group. Responsibility for implementation lies with the HOCHTIEF units.

Implementation of Group-wide innovation summits (H1-PI2, H1-O1)

HOCHTIEF is fostering innovation and digital transformation across the Group by implementing various actions to encourage networking, knowledge sharing, and collaboration. One key element consists of regular innovation summits at Turner. These provide a platform for discussing the latest technologies, ideas, and best practices. This nurtures a culture of innovation throughout the company. In 2025, the theme of the 10th Innovation Summit was "Empowering Transformation."

International working groups bring together teams of experts from different regions to develop cross-divisional solutions and overcome common challenges. In addition, workshops and targeted innovation forums facilitate the discussion of practical approaches and promote interdisciplinary knowledge transfer. AI, information and communication technology (ICT) systems, and innovation also played a major role at the Group-wide Executive Leadership Meeting. The aim here was to share a common vision for the use of AI solutions, state-of-the-art ICT systems, and innovative approaches, and to embed that vision throughout the Group.

Ideas management system (H1-PI1, H1-O1)

HOCHTIEF's ideas management system creates the scope for innovation and continuous improvement by encouraging active employee participation. In this way, it is possible to identify and develop creative approaches and solutions and integrate them efficiently into projects and processes. Regular awards for the best proposals boost the motivation to participate and strengthen the company's innovative drive. Overall, the ideas management system helps encourage sustainable and efficient solutions that enhance the company's competitiveness and business success while fostering ecological and social responsibility.

The Ideas Room serves as an internal ideas hub at HOCHTIEF. The platform offers employees the chance to publicize their ideas and best practices. In a structured process, these are evaluated and followed up by Group experts. The ten best ideas are singled out for awards.

Academic partnerships:
Sponsorship, scholarships, and awards for graduates (H1-PI2, H1-O1)

HOCHTIEF supports and promotes universities and colleges by offering scholarships, sponsorships, and awards. This collaboration fosters the sharing of knowledge and innovations between higher education institutions and industry. HOCHTIEF provides support in various ways, including grants and mentoring for high-achieving students. As a member of the RWTH Campus, HOCHTIEF is actively involved in the development of innovative construction and infrastructure projects. Successful examples include joint projects in the Center for Building and Infrastructure Engineering (CBI) aimed at making technologies more efficient and driving new trends. The Executive Leadership Program at ACS University is also affiliated with the IESE Business School at the University of Navarra.

Deployment of artificial intelligence (AI) (H1-PI1, H1-PI2, H1-O1)

HOCHTIEF is using artificial intelligence (AI) to drive digitalization and promote efficiency as well as sustainability along the entire value chain. Our AI-based solutions help us optimize processes along the entire value chain and meet increasing demands in terms of quality and sustainability. We apply AI-based solutions to analyze consumption data in order to match invoices for materials with delivery notes and improve financial control processes. AI and AR technologies improve the construction process by enabling precise site monitoring, material identification, and digital documentation. We use AI-powered analytics to monitor roads in order to detect damage early on, optimize maintenance, and prolong road life.

Edgital is the digital companion for all processes related to the life cycle of road infrastructure. The HOCHTIEF subsidiary has developed a software solution to inventorize, assess, and manage infrastructure assets at a glance. Using AI-driven technologies, Edgital enables regular, objective assessment of current road condition, thus facilitating long-term road maintenance. In 2025, Edgital was awarded the Innovation Prize by DVWG, the German Transport Science Society.

TOUGH Training is an interactive training software developed by HOCHTIEF to enhance occupational safety in the construction industry. By integrating gamified learning experiences, TOUGH Training lets employees securely apply and grasp safety guidelines, construction techniques, and best practices in a risk-free, controlled setting. The primary focus of TOUGH Training is on enhancing employees' safety by enabling them to experience and learn about dangerous situations and processes in a virtual world. This approach not only improves learning retention but also ensures that employees are well prepared to tackle real-world challenges safely and efficiently. The software is used both in-house at HOCHTIEF and by clients throughout Europe. TOUGH Training also garnered the eLearning Award 2025.

An application developed by Nexplore combines cutting-edge AI technology with a protected data environment. The tool enables employees to quickly and accurately access relevant information and expert knowledge without the risk of inadvertently disclosing sensitive data. Other AI applications are also in use at HOCHTIEF. Test and pilot groups are looking at the specific ways to use AI for efficiency gains in various tasks. This underscores the strategic use of innovative technologies to safeguard HOCHTIEF's knowledge advantage in the long term and to optimize internal processes.

Skills development and training programs (H1-NI1, H1-PI2, H1-O1)
To actively shape the digital transformation and get all employees on board on this journey, HOCHTIEF is deploying wide-ranging skills development and training programs. The aim is to continuously build digital skills, promote safe and secure use of new technologies, and enable employees to meet the needs of a changing world of work over the long term. This includes training on newly introduced software, systems, and digital work platforms as well as further training for specific applications and everyday tools. Practical content is also included—such as tips on making efficient use of digital applications, including social media and communication platforms. These measures aim to systematically build digital skills, alleviate insecurity in using new technologies, and promote the equal participation of all employees in the digital transformation.

Our targets

The thematic area of innovation and digital transformation is integral to HOCHTIEF's Group-wide strategy. Accordingly, Group-wide targets[1] were included for this area in the HOCHTIEF Sustainability Plan 2025. They apply to all business activities and regions of operation that were part of the HOCHTIEF Group at the time the Sustainability Plan 2025 was adopted.

We aim to stimulate innovation and develop sustainable products and services (H1-PI1, H1-PI2, H1-O1)
The target of fostering innovation and developing sustainable products and services is of pivotal importance to HOCHTIEF as it lays the cornerstone for long-term competitiveness in a changing market. The construction industry is facing growing pressure to reduce its ecological footprint and respond to the demand for efficient, resource-saving solutions. Innovation and sustainability are the key factors in overcoming these challenges and at the same time offering clients added value. For HOCHTIEF, this means delivering future-ready solutions based on the nonstop development of new technologies and processes in areas such as digital transformation or the integration of sustainable materials. This innovative drive not only strengthens our market position but also makes a significant contribution to achieving global climate targets and promotes the construction industry's transformation to greater sustainability.

HOCHTIEF continued to work hard on achieving this objective during the reporting year and notched up various new project successes. These once again included major orders in the renewable energy sector, such as grid upgrades and energy storage systems. New mobility concepts were another activity area for HOCHTIEF in the reporting year, including the delivery of new charging infrastructure and innovative mobility projects. With projects such as the YEXIO data centers, we are expanding our product range to provide a comprehensive and sustainable package for the fast-growing digital infrastructure market. Our capability portfolio continues to feature sustainable services such as the TOUGH Training virtual training offering. Target achievement is verified through structured monitoring in the form of both external assessments, such as sustainability ratings, and continuous feedback. The feedback comes from operational units via, for example, Group-wide working groups or technical conferences.

Turner Ventures, the Group-wide investment program for future-oriented startups, further boosts our innovative capacity. Collaborating with startups that develop solutions for decarbonization, digital processes, and sustainable materials allows us to test and validate innovative technologies in real-world projects from an early stage. In this way, we accelerate the adoption of beneficial innovations and reinforce our position as a leader in promoting efficiency and sustainability in the construction industry.

[1] These are commitments from the sustainability plan, but not measurable targets within the meaning of the ESRS.

Another milestone in our innovation and sustainability strategy is the expansion of our strategic partnership with Vulcan Energy to deliver Europe's largest project for the production of sustainable lithium for electric vehicles. The lithium plant deploys completely fossil-free extraction and processing, combining state-of-the-art lithium extraction technologies with renewable energy. This innovative solution marks a decisive step forward in driving the energy transition, reducing European dependence on critical raw materials, and shaping the future of the European mobility transition.

Propose sustainable solutions in the bidding or preconstruction phases of at least 50% of construction projects by 2025 (H1-PI1, H1-PI2, H1-O1)

Our target of proposing sustainable solutions in the bidding or preconstruction phases of at least 50% of construction projects by 2025 is a key step by HOCHTIEF toward fostering innovation and digital transformation in construction. In the early planning phase, digital technologies such as Building Information Modeling (BIM) and digital twinning offer the opportunity to simulate and optimize sustainable solutions effectively.

Integrating this type of tool enables HOCHTIEF to consider environmentally friendly and resource-saving solutions right from the start of a project and ensure that they are implemented efficiently. This target not only supports the company's sustainable development but also sharpens our competitive edge and HOCHTIEF's position as an innovative industry leader contributing to the future viability of the construction sector.

To increase the proportion of projects delivered sustainably, we incorporate our sustainability strategy and targets into our dialogue with clients. We share our accumulated global expertise with clients to deliver innovative ideas and utilize it for the sustainable execution of each project. We also aim to propose sustainable solutions as an alternative in instances where clients do not initially request them. Early contractor involvement gives us significant leverage to propose sustainable solutions for clients in the early project phases. We aim to further intensify these efforts to propose sustainable alternatives to clients. Target achievement is tracked by our internal reporting system.

Metrics

Volume of new orders for clients in high-tech market segments[1] within the HOCHTIEF Group

The volume of new orders for clients in high-tech market segments in 2025 is a critical metric for HOCHTIEF because these projects make a substantial contribution to the company's business overall and are a focus of our business model. They are not only of considerable economic importance, but also play a key role in fostering innovation and the digital transformation in the construction industry. In addition, every structure built for clients in high-tech market segments helps to drive innovation and digital transformation. This metric is also linked to the material positive impact (H1-PI1) in terms of contributing positively to the development of innovations within society at large. The exacting requirements of these markets, notably in respect of quality, speed, and our clients' complex expectations, make the use of innovative digital methods indispensable to implementing our projects. We recorded a sharp increase in new orders in the reporting year, primarily attributable to a significant rise in new orders in Turner's data center segment.

Volume of new orders[2] for clients in high-tech market segments within the HOCHTIEF Group (EUR billion)

	2025
HOCHTIEF Group	**20**

[1] A. Energy transition: renewable energy, batteries, lithium, nuclear; B. Digital infrastructure: data centers, semiconductors, mobile communications, railway technology and infrastructure system; C. New sustainable mobility: electric vehicles; D. Social infrastructure: biopharmaceuticals
[2] Contract value of new projects and change orders

BASF LABORATORY SCHWARZHEIDE, GERMANY

After a construction period of just over two years, HOCHTIEF has handed over the laboratory building in the Lusatia region on schedule. The new building stands for state-of-the-art technology, sustainable solutions, and partnership-based cooperation.

Looking ahead

HOCHTIEF's strategy has positioned the Group as a well-placed global provider of engineering-led, end-to-end infrastructure solutions. In particular, we have advanced to become a leader in rapidly expanding strategic growth verticals including the AI, Digital & Tech sector as well as Energy (including Nuclear), Critical Minerals and Defense, where demand for advanced infrastructure continues to accelerate. This momentum builds on our long-established, locally embedded presence in core infrastructure markets in North America, Australia and Europe, which remains the foundation of our competitive strength and our ability to scale into these next-generation markets as a life-cycle partner. (For further information, please see the Markets and operating environment section; for the outlook for HOCHTIEF Aktiengesellschaft under German GAAP, please see under "HOCHTIEF Aktiengesellschaft (Holding Company): Financial Review under German GAAP (HGB)"). At the same time, we prioritize cash-backed profitability and pursue a rigorous risk management approach. Our businesses are flexible, allowing management to quickly adapt to varying market conditions.

Active and disciplined capital allocation is a high priority, and we continue focusing on attractive shareholder remuneration as well as investing in strategic growth opportunities to create sustainable value for all stakeholders.

Analysis of performance in 2025 relative to the prior-year outlook[1]

HOCHTIEF has achieved a significant increase in performance in 2025. During the reporting period, the HOCHTIEF Group generated an operational net profit of EUR 789 million, up 26% year on year (2024: EUR 625 million reported), thus significantly above the top end of the Group's initial guidance range for FY 2025 of EUR 680 – 730 million (i.e. up to +17%). In November 2025 HOCHTIEF raised its FY 2025 guidance to EUR 750–780 million (i.e. up to +25% yoy), which was also exceeded. Nominal net profit of EUR 902 million achieved in 2025 included net EUR 113 million positive one-off effects, especially from the Flatiron-Dragados transaction in Q1 2025.

The HOCHTIEF Group's net debt position amounted to EUR 97 million as of December 31, 2025, an improvement of EUR 23 million year on year (net debt position 2024: EUR 120 million), and thus better than the expectations published a year ago. The net debt position is after the EUR 393 million dividend payment and a EUR 762 million net impact from M&A activities. These M&A activities include the acquisitions of Dornan by Turner, the investment in German lithium producer Vulcan, an Abertis capital increase and the deconsolidation of Flatiron and a partial divestment of UGL Transport at CIMIC, and have been fully offset by the strong cash flow performance, which included a EUR 346 million inflow from working capital in the year.

In 2025, the Lost Time Injury Frequency Rate (LTIFR) was 0.71 and thus stable at the previous year's level (0.66). Once again, we achieved a figure that is significantly better than the forecast of 1.04 made for 2025. Despite the volatility of this indicator, a positive trend has been evident in recent years. This positive development is based on a decline in accidents across all segments. The consistent further development of safety training with behavior-based prevention approaches has made a significant contribution to this.

During the reporting period, HOCHTIEF further fostered its comprehensive commitments from the Sustainability Plan 2025 with international working groups developing and supporting specific measures for the commitments made across all ESG dimensions. For example, the Group has implemented its decarbonization roadmap (net zero pathway) with several measures, such as the Embodied Carbon Initiative.

[1] For further information, please see the Financial Review section.

Overall assessment of future developments

HOCHTIEF's year-end 2025 order backlog stood at EUR 72.5 billion—an end-of-year record. This corresponds to an increase of 7% year on year or 18% on a comparable basis, fx-adjusted basis. Fundamentals are expected to remain sound in 2026 for the activity level in the relevant markets for HOCHTIEF (also see the Markets and operating environment section).

The overall outlook is therefore solid and reflected in our expectations for the key performance indicators in 2026 for HOCHTIEF Group and for HOCHTIEF Aktiengesellschaft. Exchange rates applied to the forecast are close to the spot rates at the end of 2025.

For the Group, we expect an operational net profit in the range of EUR 950–1,025 million for 2026, subject to market conditions. This represents an increase of 20-30% yoy compared to a 2025 operational net profit of EUR 789 million. HOCHTIEF expects to achieve a similar net cash position at the end of 2026, after an expected dividend payment of EUR 513 million (EUR 6.60 per share as proposed, see below), and adjusted by any further M&A activities and net working capital changes.

We are committed to establishing a strong safety culture throughout the Group and continuously raising awareness of health and safety. We are aware that accidents are influenced by a wide range of factors and that a sustainable reduction in accident frequency must always be assessed in terms of the long-term trend. In view of the positive development in recent years, we expect this favorable trend to continue and are aiming for an LTIFR of 0.9 for 2026, in line with the long-term target set out in the Sustainability Plan.

Dividend

Shareholder remuneration remains a priority for HOCHTIEF. The proposed dividend of EUR 6.60 per share (was EUR 5.23 per share for the previous financial year 2024) represents a dividend payout ratio of 65% of operational net profit.

Opportunities and Risks Report

At HOCHTIEF, business segments and projects vary in terms of nature, volume, duration, complexity, and the engineering challenges they present. In light of this, one of the Group's key success factors is opportunity and risk management that is closely geared to our business activities and places the focus on individual project operations. (For an overview of current market opportunities, please see the Markets and Operating Environment and the Goals and Strategies sections.) We also regularly address non-financial topics, their impacts, and relevance, among other things through our materiality analysis.

HOCHTIEF's established risk management system embraces all layers of the organization and defines directives, responsibilities, processes, and instruments. Opportunities and risks are assessed at an early stage and suitable measures developed to take advantage of opportunities as well as for effective risk reduction. This covers both financial and non-financial aspects.

We keep constant track of developments in the markets and regions relevant to the Group and give due account to such developments in corresponding planning activities. If influencing factors in a project or segment develop differently than assumed prior to this time, this could have an impact on HOCHTIEF's key performance indicators and possibly alter the growth figures predicted for a given year or consecutive years.

The financial position and financial performance of HOCHTIEF Aktiengesellschaft as management holding company are ultimately determined by the assets of the Group companies and their ability to generate sustained positive earnings contributions and positive cash flows. The risk profile of HOCHTIEF Aktiengesellschaft is therefore essentially the same as that of the Group. The reporting of the companies to HOCHTIEF Aktiengesellschaft consequently comprises the basis for assessment of the Group position.

Group-wide risk and opportunity management

Our Group-wide risk management system[1] is made up of various individual components. The overarching framework is provided by directives that are continuously reviewed and adapted as necessary with regard to changing legal requirements—in particular the directives on risk management[2] and risk reporting within the Group. Group-wide standards—on subjects such as occupational safety and health, social standards, and rules on conduct and compliance such as the Code of Conduct—also contribute toward minimizing risk. Finally, these Group-wide measures are complemented by the segments' and operational units' individual systems, processes, and organizational instructions that allow for the detailed identification, assessment and management of opportunities and risks in the respective markets. (For more information, see the description of the process to identify and assess material impacts, risks and opportunities in the ESRS 2[3] section of the Sustainability Statement).

The Executive Board, the Supervisory Board, and the Audit/Sustainability Committee are regularly informed about potential material control deficiencies and the effectiveness of the established controls. No material discrepancies were known to management in 2025 has in recent years, in the context that would call into question the adequacy and effectiveness of the Company's risk and opportunity management.[4]

Definition of risks and opportunities

HOCHTIEF defines "risk" as an event with a potential impact on the expected values of relevant budgeted key financial performance indicators in relation to corporate goals. Risk in this context primarily relates to events with potential impacts on profit before tax, on tax, and on liquidity. For a transparent presentation, individual risks are

[1] The content described here also serves as evidence of compliance with the disclosure requirements pursuant to ESRS 2 GOV-5 36 a-e as well as IRO-1 53 e.
[2] The risk management policy is available on www.hochtief.com/sustainability/materiality.
[3] The Sustainability Statement is not part of the statutory audit of the annual and consolidated financial statements under Section 317 of the German Commercial Code (HGB).
[4] The content of this paragraph is not part of the statutory audit of the annual financial statements and consolidated financial statements in accordance with Section 317 of the German Commercial Code.

classified into risk categories; these were revised in the 2025 reporting year as part of a review of the Group directives.

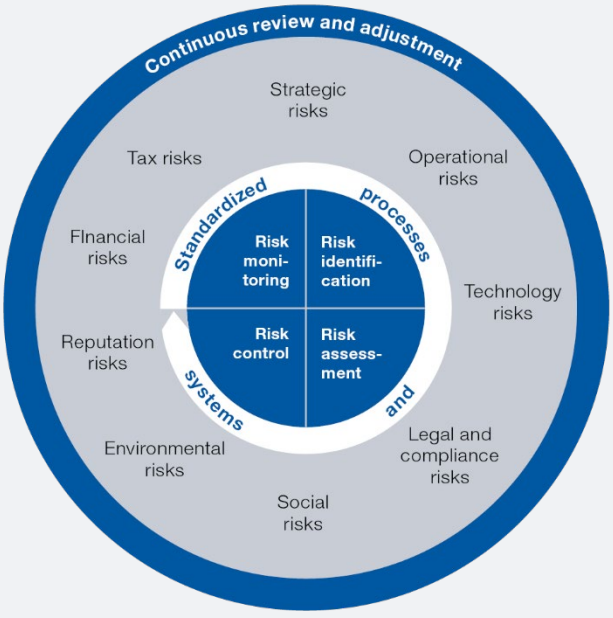
The following categories of risk are analyzed in risk management in a detailed bottom-up process that have a direct or indirect impact on business activities in the HOCHTIEF Group:

- Strategic risks
- Operational risks
- Technological risks
- Legal and compliance risks
- Social risks
- Environmental risks
- Reputation risks
- Financial risks
- Tax risks

In our assessment, we generally also take into account risks that arise for our stakeholders from our products and services.

Additionally, we simultaneously analyze and actively develop the opportunities that present themselves for our projects and markets. We define an “opportunity” as potential future developments or events that could lead to a positive deviation from the Group’s forecasts or objectives. Identifying and exploiting opportunities can make an important contribution to maintaining and extending our market position.

Risk management with risk categories



Risk management in HOCHTIEF's segments

All HOCHTIEF segments are an integral part of the HOCHTIEF risk management system and continuously improve their individual risk management in their respective market environments.

Turner and CIMIC are integrated into HOCHTIEF's risk management system. The Risk Management Steering Committee at Turner assumes a key role, coordinating and overseeing all risk-related issues. A specially developed risk control matrix allows Turner to identify and—where necessary—monitor potential process risks from an early stage. Business unit-level risk analysis is also compiled on a quarterly basis and the findings aggregated into a "risk memorandum." The Turner Engineering Group provides support in the avoidance of project risks.

CIMIC—like the other HOCHTIEF operational units—practices risk management as the identification, assessment, and treatment of risks with the potential to materially impact its operations, people, and reputation, the environment and communities in which it works, and its financial prospects. Risks are monitored on an ongoing basis and a quarterly risk report is submitted to the CIMIC Board. It is coordinated with CIMIC's business activities, embedded within existing processes, and aligned to corporate objectives, both short and longer term. Given the diversity of its operations as well as the breadth of its geographies and markets, CIMIC faces a range of risk factors that have the potential to affect the achievement of business objectives. As in all other segments, risk management at CIMIC is subject to the HOCHTIEF Group directive on risk reporting.

The Engineering and Construction segment encompasses the activities of HOCHTIEF Europe and of the non-controlling interest FlatironDragados in North America. At HOCHTIEF Infrastructure, which is responsible for the construction business in Europe, the risk management is splitted into five groups: Bid and Project Control (assisting operational units in all aspects of bid preparation, and supporting operational units in risk monitoring); Data Protection and Information Security (implementing and monitoring information security); Dispute Resolution and Litigation (providing project management for dispute handling); the Technical Quality Control Group (reducing technical risks and improving project execution); and Quality Management (QM) (development, documentation, and further improvement of processes for our operating business; internal and external QM audits; continuous improvement process (CIP); best practices; and lean construction).

HOCHTIEF PPP Solutions, which delivers design, finance, build, and operate services for transportation and social infrastructure projects on a public-private partnership (PPP) basis, has implemented a risk management system for systematic risk identification, assessment, and control. Opportunities and risks are regularly analyzed in the core acquisition, execution, and divestment processes. Active risk control reduces the potential impact with corresponding measures. The range of defined measures is broad. Depending on the potential risk, they may include, for example, working actively with the client to develop an alternative technical solution, insurance against risk, or additional risk provisioning. Risk management is part of the quality management system introduced by HOCHTIEF PPP Solutions for continuous improvement of projects and services and for systematic process optimization.

Opportunity management is primarily a function of strategic management and the decentralized continuous improvement process. In order to spot opportunities and act on them at an early stage, we keep a very close watch on our markets and their development. Notable opportunities for the HOCHTIEF Group include acquisitions and increased levels of investment in our core markets.

Risk culture

The Executive Board is responsible for risk management. The Executive Board is responsible for implementing and ensuring measures for identifying, prioritizing, managing, and controlling relevant corporate risks—in close coordination with the management of the operating units and with the support of Corporate Controlling and Risk Management. HOCHTIEF pursues the continuous improvement of risk management as a key strategic goal. The importance of risk management and HOCHTIEF's strategic approach are developed further in international working groups and communicated to employees. We thus offer initial and further training on selected risk management areas in-house and place great importance on employee participation in such training.

HOCHTIEF has a remuneration system with fixed and variable components which is regularly reviewed. A key component of this system are risk-related metrics and targets against which employees' performance can be measured on the basis of individual performance agreements tailored to each employee's job profile and responsibilities. The Group provides a wide range of systems and tools enabling employees to identify potential risks for HOCHTIEF, escalate them, and take action when necessary.

Additional evidence of successful application of opportunities and risk management at HOCHTIEF is provided by HOCHTIEF's certification according to ISO 9001:2015, which also takes into account how opportunities and risks are handled.

HOCHTIEF Insurance Broking and Risk Management Solutions

As the Company's in-house insurance broker, HOCHTIEF Insurance Broking and Risk Management Solutions GmbH is responsible for coordinating the insurance-related risk management for the HOCHTIEF Group's segments and is consequently an integral part of Group-wide risk management. This company is directly held by HOCHTIEF Aktiengesellschaft. The company's objective is to protect the consolidated balance sheet with adequate insurance covers for the HOCHTIEF Group's manifold projects and activities at a minimal total cost of risk. Localized risk management at the operational units is further supported by aggregated information obtained through collection and analysis of data as part of Group-wide insurance reporting processes.

Thanks to insurance solutions, both for transportation infrastructure projects and for social, urban, digital and energy infrastructure projects, the relevant insurable risks are covered both before and during the construction phase as well as in the operating phase. The comprehensive insurance concepts focus on the provision of proper insurance cover for property damage and financial losses. Instruments that typically serve this purpose not only offer liability insurance but also builders' risk insurance and all-risk property insurance. In addition to HOCHTIEF Group units, project insurance cover also extends to external companies, notably project partners, owners, and end users.

The reinsurance company Stonefort Reinsurance S.A. provides additional products and services to optimize the Group's risk and cost structure and for external clients. Rating agency AM Best once again rated the financial strength of Stonefort Reinsurance S.A. as "A-" (Excellent) in 2025.

Opportunity and risk reporting

A Group-wide directive governs the uniform application of risk reporting. It encompasses risk reporting and communication, describes the structure and procedures, and lays down the risk reporting framework. This risk reporting process supplements operating risk management as part of the Group-wide processes for controlling risk. The directive is updated as needed, most recently in 2025.

Financial and non-financial risks[1] are incorporated into the planning and forecasting process. In a multi-stage process, the operating and holding companies collate their risk exposures and assess them together with segment managements and controlling departments. Relevant risks are then submitted to Corporate Controlling and Risk Management, stating the potential impact of a risk on earnings and liquidity in the current and two subsequent years, the risk category, the possible time scale, the probability of occurrence, and any measures already taken to avert and reduce the risks identified. The resulting risk situation goes into a final risk report

[1] Non-financial risks in accordance with ESRS are addressed in the ESRS 2 section of the Sustainability statement.

compiled for the Executive Board. This includes performing risk aggregation based on the introduction of Monte Carlo simulation, including the calculation of a value-at-risk for the Group and a regular risk-bearing capacity test. Regular reports on the Group's current risk situation are also provided to the Supervisory Board's Audit/Sustainability Committee. At the same time, HOCHTIEF has in recent years, in the context of sustainability reporting requirements, intensively addressed potential opportunities and risks with a longer-term perspective (further information can be found in the description of the process for identifying and assessing material impacts, risks and opportunities of the ESRS 2 section[1] of the Sustainability Statement). The results of the working groups are reported to the Executive Board and Supervisory Board on an ongoing basis.

Scenarios, correlations, and sensitivities

Risk scenarios compiled on a case-by-case basis present potential impacts on HOCHTIEF and correlations between risks, and make it possible to perform sensitivity analyses. The risk situation is continuously monitored using the tools available and—independently of regular updates—material changes are reported without delay (internal ad-hoc reporting). A key element of risk management at HOCHTIEF in this connection is the Investment Committee, which provides advance assessment of the risks for HOCHTIEF associated with planned capital expenditure, divestments, and investments requiring approval. In this way, such risks are avoided or at least reduced. This serves to provide standard criteria and processes ensuring that all decisions are made on the basis of identical approved principles. Project size and complexity are important criteria for the type and scope of risk analysis.

Oversight by Corporate Auditing

Corporate Auditing is an independent internal audit function responsible for monitoring business processes and risk management with regard to compliance with the law, regulations, directives, internal control systems, and corporate objectives. Ad-hoc special audits supplement the risk-based audit program.

To this end, Corporate Auditing has extensive and unrestricted powers of information and examination within the Group. It is an independent internal institution which performs audits on behalf of the HOCHTIEF Executive Board in the business segments, Group companies, project companies, and third-party entities for which it has contractual auditing powers, and which supports the Executive Board in this regard and in its managerial role with independent analyses, assessments, and recommendations. Corporate Auditing reports to management and the Executive Board on each audit and, in summary form, to the HOCHTIEF Audit/Sustainability Committee.

Corporate Auditing aims to protect corporate assets, to assess the reliability of individual areas of the risk management and monitoring systems, and to contribute toward improving those systems as well as toward cost efficiency in internal business processes.

Our Group companies Turner and CIMIC additionally have their own independent audit units. Audit findings are used to further optimize risk management and notably the early detection and control of risk. The processes operated by Corporate Auditing follow international auditing standards and undergo regular independent quality assessments.

[1] The Sustainability Statement is not part of the statutory audit of the annual and consolidated financial statements under Section 317 of the German Commercial Code (HGB).

Internal control system at HOCHTIEF

Our internal control system (ICS)[1] is based on the principles, guidelines, and measures applied at HOCHTIEF for the organizational implementation of Executive Board decisions. It is geared to ensuring and documenting the fitness for purpose and effectiveness of the system for mitigating all material operating and financial corporate risks as well as for reducing these risks to a level that is appropriate for the Company. HOCHTIEF developed the ICS on the basis of the globally recognized Internal Control—Integrated Framework (COSO Framework) issued in 2013 by the Committee of Sponsoring Organizations of the Treadway Commission, adapting the framework to the Company's needs. The Framework defines the elements of a control system and sets the benchmark for assessing the adequacy and effectiveness of an ICS.

Internal control system in relation to non-accounting processes[2]

The adequacy and effectiveness of the internal control system (ICS) is ensured by measures and controls adapted to HOCHTIEF's business activities. The necessary controls are then defined and documented. Since the beginning of 2023, Group-wide formal requirements have been implemented in the form of uniform risk control matrices that also cover non-financial business processes. Regular spot checks are made by the process owners and Corporate Auditing to assess the effectiveness of the controls. These form the basis of a self-assessment of control adequacy and effectiveness. Oversight of the ICS is the responsibility of Corporate Auditing, which reviews compliance with legal requirements and internal directives as well as performing effectiveness assessment.

A further element of the ICS is a compliance management system (CMS) reflecting the enterprise's risk situation. The aim of our compliance system (for further information, please see the Governance section) is to prevent corruption, antitrust infringements, and anti-money laundering (AML) violations from the outset. This is achieved by implementing a comprehensive CMS that includes the identification of and assignment of measures to compliance risks and is subject to continuous monitoring and improvement. Among other aspects, our focus here is on regular workforce training as well as on adopting suitable processes and systematic controls. It is thus the job of the compliance organization to put organizational precautions in place so as to secure compliance with prevailing law and in-house compliance requirements on the part of the Company, its decision-making bodies, and the workforce.

The Executive Board, the Supervisory Board, and the Audit Committee are regularly informed about potential material control deficiencies and the effectiveness of the established controls. No material discrepancies were known to management in 2025 that would call into question the adequacy and effectiveness of the ICS in relation to non-accounting processes.

Internal control and risk management system in relation to the financial reporting process

Proper and reliable financial reporting is of key significance in making management decisions as well as in providing information to stakeholders and the public. The reporting includes the Annual Financial Statements of HOCHTIEF Aktiengesellschaft, HOCHTIEF's Consolidated Financial Statements, and the Combined Management Report. Risk analysis and control definition work carried out at the beginning of the process identifies significant control deficiencies for the accounting and financial reporting processes and for other processes in material companies, organizational units, and Group functions. Risks associated with the Group financial reporting process are dealt with in the following ways at the HOCHTIEF Group: IFRS Accounting Guidelines, which are updated annually, ensure uniform accounting recognition and measurement throughout the Group. Annually updated German Commercial Code (HGB) accounting guidelines also have to be followed for German Group companies. Subsidiaries—in close consultation with Corporate Accounting—are responsible for adhering to the Group-wide accounting policies in their financial statements.

Accounting for financial instruments is carried out in consultation with the Corporate Finance department. This ensures the reliability and accuracy of the figures used.

[1] The content described here also serves as evidence of compliance with the disclosure requirements pursuant to ESRS 2 GOV-5 36 a-e.
[2] This section on the internal control system in relation to non-accounting processes is not part of the statutory audit of the annual financial statements and consolidated financial statements according to § 317 German Commercial Code (HGB).

The measurement of derivative financial instruments is additionally supported by a treasury management tool established throughout the industrial and banking sectors. HOCHTIEF also makes use of external service providers—for example, for the assessment of pension obligations.

The correct performance of capital, liability, expense, and income consolidation as well as interim profit elimination is aided by software-supported preparation of the consolidated financial statements and systems for validating the figures generated. If there is nonetheless any need for clarification in specific instances, the matters are investigated and remedied by Corporate Accounting. The consolidation system utilized by the Group is access-protected. This ensures that employees are only able to access the data of relevance to them. The consolidation system is regularly reviewed by Corporate Auditing.

In the process of preparing the annual and consolidated financial statements, European Single Electronic Format (ESEF) compliance—among other things—is ensured by the use of a disclosure management system in combination with an authorization system; this is also reviewed by Corporate Auditing.

The Executive Board, the Supervisory Board, and the Audit/Sustainability Committee are regularly informed about potential material control deficiencies and the effectiveness of the established controls. No material discrepancies became known to management in 2025 that would call into question the adequacy and effectiveness of the Company's internal control and risk management system. We continuously improve our ICS and RMS on the basis of internal or external audit results.[1]

The members of the HOCHTIEF AG Executive Board take the necessary oath of office as part of the financial reporting process. In doing so, they confirm that the applicable accounting standards have been complied with and that the Annual and Consolidated Financial Statements convey a true and fair view of the Group's earnings, financial position and net assets and that the Group Management Report, which is combined with the Management Report of HOCHTIEF Aktiengesellschaft, presents the course of business, including the business results and the Group's position, in such a way that a true and fair view and that the significant opportunities and risks associated with the Group's expected development are described.

Sustainability statistics, which relate to the HOCHTIEF Sustainability Plan 2025 and serve to meet the requirements of non-financial reporting under the German Commercial Code (HGB), are collected, processed and analyzed Group-wide—as a rule within each year—using software-based tools. These include qualitative and quantitative information on all relevant sustainability topics. Analysis of the data is the responsibility of the respective functional departments. The results are incorporated both in annual Group reporting and in the continued development of activities relating to the Sustainability Plan. (For further information on sustainability, please see the Sustainability Statement[2].)

Classification of opportunities and risks

Binding definitions of risk categories ensure uniform and transparent presentation. Risk assessment and reporting serves to quantify risks with regard to potential impact and probability, after accounting for any action taken. Expected value is defined as probability of occurrence times potential impact on financial position and financial performance. The aggregated risks in the current and two subsequent years in the risk categories set out in the following are classified according to expected value as "low" (potential impact EUR 0–250 million accumulated over three years), "medium" (potential impact EUR 250–500 million accumulated over three years), or "high" (potential impact over EUR 500 million accumulated over three years). The expected value of the potential impact relates both to profit before tax and to liquidity, in each case compared to the corresponding budgeted figures. These two key figures are directly linked to the two most important key performance indicators of net cash and operational net profit.

[1] The content in this section is not part of the statutory audit of the annual financial statements and consolidated financial statements in accordance with Section 317 of the German Commercial Code.
[2] The Sustainability Statement is not part of the statutory audit of the annual and consolidated financial statements under Section 317 of the German Commercial Code (HGB).

The definition of risk applied in the HOCHTIEF Group encompasses financial and non-financial risks together with their impacts. For the internal reporting process, it is immaterial whether a reportable risk is based on financial or non-financial aspects. A reportable deviation in terms of net loss amount and expected value is given as soon as the value is above the respective reporting limits. In this way, material risks—within the meaning of Section 315c (2) in conjunction with Section 289c (3) Sentence 1 No. 3 and No. 4 of the German Commercial Code—that are likely to have a substantial negative impact on non-financial aspects are taken into account. Risks whose impact is below the reporting threshold are only included if they have a large potential impact on non-financial aspects or if the financial impact is likely to be large but currently unquantifiable.

With regard to the non-financial aspects in accordance with the German Commercial Code, sustainability management is decentralized at HOCHTIEF but centrally supervised by Corporate Department Sustainability. Non-financial aspects of our operations are controlled and monitored by HOCHTIEF's Chief Sustainability Officer. Also the Corporate Headquarters functional departments analyze the risks relevant to the thematic areas in connection with their core responsibilities and within their target systems. Impacts on the environment and society, and the resulting risks and opportunities, are additionally processed at project level. Environmental and stakeholder management plans are thus standard tools in construction project execution.

Opportunities, too, are assessed for their impact on profit before tax and on liquidity. We see opportunities for HOCHTIEF above all in our core markets, where we actively evaluate growth potential primarily in our established market segments.

The overall risk exposure for the HOCHTIEF Group is determined by taking the sum total of the expected individual risk exposures and aggregating at Group level by segments and the stated categories. Opportunities are primarily established by closely observing markets and identifying available market potential in all segments served by the Group.

Opportunity and risk situation in the HOCHTIEF Group

The overall risk position identified at HOCHTIEF for 2025 principally relates to risks assigned to the individual categories as explained in the following.

Strategic risks

The HOCHTIEF Group's economic performance is closely tied to macroeconomic trends and business cycles in the countries and regions where HOCHTIEF operates. For further information on our markets and HOCHTIEF's positioning, please see the Markets and Operating Environment and Segment Reporting sections.

Market risks[1]

We closely monitor world economic and geopolitical developments in the regions and markets key to HOCHTIEF. HOCHTIEF's operations focus on attractive markets in North America, Australia, Southeast Asia and Europe. We occupy outstanding positions in our chosen segments worldwide. From this base, we continue to see good opportunities to further bolster our market position and core business in line with our goals and to create sustainable value for all stakeholders and generate improving cash-backed profitability.

Changes in the geopolitical situation may have negative long-term impacts on the global economy and may lead to decreased public investment spending. This may lower the long-term growth outlook in the markets key to HOCHTIEF and/or impair future business development. With its strong global presence centered on developed markets and its prestigious local operations, HOCHTIEF is well positioned to manage potential regional fluctuations and respond flexibly to risks of this kind.

[1] For further information on the HOCHTIEF markets, please see the Markets and Operating Environment section.

Ongoing political tensions could potentially have an impact on the global economy and trigger financial market shocks. While the Group has no operating business in the affected regions, these conflicts could impact the Group indirectly through factors such as rising commodity prices and, as a result, potentially higher energy and supply prices. Likewise, higher interest rates may impact the financial viability of construction investments of our clients. To compensate these effects in a constructive manner, HOCHTIEF strives to work with customers from an early phase onward in order to optimize project planning and design to manage these impacts equitably overall and ensure a fair balance of interests. Wherever possible, this includes the use of escalation clauses or the agreement of fixed prices with our suppliers in order to avoid input price fluctuations. This allows HOCHTIEF to reduce the risk to a negligible level.

Political uncertainties in Europe, political populism, and protectionism may have negative effects on the European economic region. In particular, tariff policy measures in a number of countries outside the European Union could have a negative effect on contract awards. Given the numerous state investment programs in individual European countries, we see very good opportunities, which we intend to continue capitalizing upon.

We the risks in connection with market risks as low.

Regulatory risk

Given our business activities and significant international presence, HOCHTIEF has to contend with risks arising from potential regulatory changes, at present particularly in the areas of tax and environmental protection.

Such risks can affect our key performance indicators and impact our earnings situation, notably in the case of projects lasting several years. HOCHTIEF continuously monitors national and international regulatory initiatives as well as any potential resultant changes which could affect the Company in the various markets.

We address the increasingly stringent legal requirements with regard to sustainability criteria and environment protection at operational level with energy-efficient and low-carbon solutions in building construction and civil engineering, which enable us to offer our clients sustainable solutions. HOCHTIEF is among the leading providers here and can make use of its strong market position. In addition, we are developing numerous measures to further improve our sustainability performance as part of our Sustainability Plan 2025. Environmental regulations can drive up operating costs in our projects, although these are generally passed on to clients.

We currently do not consider there to be any significant regulatory risks for HOCHTIEF within the framework of the above risk areas and therefore classify the risk as low. In addition, we are increasingly seeing business opportunities to apply our expertise to help clients meet increasing sustainability requirements.

Overall, we therefore assess strategic risks as low.

Opportunities from systematically pursuing the strategy

HOCHTIEF is a leading global provider of engineering-led, end-to-end infrastructure solutions in North America, Australia and Europe. The opportunities provided in those regions are actively targeted through strategic group initiatives where we combine our global footprint with local presence and engineering and technological know-how to maximize our value proposition and delivery capability. This enables us to further broaden our presence in rapidly expanding growth verticals, including the AI, digital, and technology sectors, as well as the energy, defense, and critical minerals markets. In these areas, we see considerable additional growth opportunities for the Group, driven by global megatrends that require major investments in the long term.

In addition, the Group has been a global leader in transport infrastructure and sustainable mobility for several decades. We also rate the outlook in this area as very positive, thanks to several infrastructure stimulus packages in key regions and favorable demographic trends.

The strategic delivery on the opportunities provided by the market is aimed at generating lasting value for all stakeholders. This is underpinned by the Group's long-standing commitment to cash-backed profitability and rigorous risk management. Our businesses are flexible, allowing management to quickly adapt to varying market conditions. Active and disciplined capital allocation is a high priority, and we intend to continue focusing on attractive shareholder remuneration as well as investments to reinforce our strategic position and to maximize the global value creation opportunities across our end-to-end solution offering.

Operational risks

Project and contract risks

The disciplined management of project and contract risks is a key driver of margin stability, backlog quality, and earnings resilience across the Group. Our long-standing engineering expertise, strong project execution capabilities, and structured governance framework enable us to manage the inherent complexity and duration of our projects in a controlled and value- oriented manner. Effective risk management is embedded throughout the project lifecycle and is continuously enhanced to reflect evolving market conditions and lessons learned.

We focus on selected, attractive markets where our technical know-how, project management and long-term local presence provide a competitive advantage and a sound basis for sustainable project delivery. We continuously evaluate market opportunities to ensure strategic alignment and an appropriate balance between risk and return, thereby supporting the overall quality and risk profile of our order backlog.

As a general principle, we seek to assume only those risk that we are able to actively manage and appropriately price. Therefore we apply a range of contractual models and structured risk mitigation tools tailored to the specific risk profile of each project. These include enhanced risk-sharing mechanisms with clients and partners, particularly with respect to inflation and supply chain disruptions. As a consequence, the share of lower-risk contract types with enhanced risk-sharing mechanisms in our order backlog has increased significantly over the last seven years to around 90% compared to around 65% at the end of fiscal year 2017.

While the normal design liability applies in relation to completed design and construction projects in some entities within the Group, certain entities within the Group have the normal contractor's liability in relation to construction contracts. This liability may include litigation by or against the Group and / or joint arrangements in which the Group has an interest. It is not possible to estimate the financial effect of these claims should they be successful.

Our aim is to avoid court cases wherever possible, nevertheless our business operations expose us to a number of risks in connection with lawsuits, claims, and regulatory proceedings. In some cases, the outcome of legal disputes and regulatory proceedings is hard to predict. By involving our legal departments at an early stage prior to legal proceedings, assigning specialized in-house teams to accompany such proceedings, and mandating experienced law firms, we ensure that process risks are mitigated wherever possible. In addition to the costs and expenses arising from proceedings themselves, the possibility of adverse rulings in individual cases cannot be ruled out. Provisions for ongoing litigation are recognized on the basis of estimated risk. We consider these accounting provisions to be sufficient.

In Germany, a collapse occurred in the Rastatt Tunnel project. HOCHTIEF is part of a joint venture for the construction of a tunnel as part of the Karlsruhe-Basel high-speed rail link for German rail track operator DB Netz AG. In August 2017, a damage occurred at the partially constructed tunnel, with the subsequent temporary closure of the existing rail link along the Rhine Valley. The joint venture and DB Netz AG agreed to identify the causes and responsibilities in an extrajudicial dispute resolution proceeding which is still ongoing.

In the CIMIC segment, CIMIC's wholly owned subsidiary, CPB Contractors, and its joint venture partner Hansen Yuncken, in a 50/50 joint venture (JV), were awarded the design and construction of the new Royal Adelaide Hospital for the South Australian State Government. The project experienced difficulties and delays arising from the complex interdependencies between the State's works and the JV's works and a dispute between the parties arose. The parties commenced an arbitration to resolve the dispute. The arbitration hearing is complete with closing submissions delivered in July and August 2024. The arbitration award is expected in 2026.

CIMIC's wholly owned subsidiaries, CPB Contractors and UGL Engineering, in conjunction with their joint venture partner (together the "M6 D&C JV"), were contracted to deliver the M6 Stage 1 motorway tunnel project for Transport for New South Wales ("TfNSW"). During the course of 2024, the project encountered differing and adverse ground conditions and geological issues not reasonably anticipated at time of tender. As a consequence, works in the affected areas were stopped. As a result of these geological issues, in May 2025 the M6 D&C JV determined the project cannot be completed as contemplated by the contract and, as such, the contract has been frustrated with the M6 D&C JV's obligations discharged by operation of law. This determination has been disputed by TfNSW. All tunnel construction activity has ceased. On June 30, 2025, TfNSW and the M6 D&C JV reached agreement to complete surface works under a new deed and those works are now largely complete. By an agreement dated 8 October 2025, TfNSW and the M6 D&C JV agreed to continue without prejudice discussions regarding the impacted tunnelling works to find an appropriate commercial resolution given the complex nature of the geotechnical events, including an assessment of whether excavation and tunnel construction is viable in the caverns area. Those without prejudice discussions continue. Revenue is recognized in relation to services provided and accrued commitments prior to the notice of frustration, including the demobilisation of the ceased tunnelling work. Whilst not expected, it is possible that the final outcome could vary depending on the outcome of ongoing discussions between the parties. The M6 D&C JV will continue care and maintenance activities on the site until June 30, 2026.

On February 13, 2012, CIMIC announced that it had reported to the Australian Federal Police ("AFP") a possible breach by the Leighton International business of its Code of Ethics that, if substantiated, may have contravened Australian laws. The matter has been, and in some cases continues to be, subject to the investigations below: In March 2014, the Australian Securities and Investment Commission ("ASIC") commenced a formal investigation into potential breaches of the Corporations Act relating to a number of matters being investigated by the AFP. In March 2017, ASIC advised CIMIC that its investigation has concluded and it will take no further action. On 22 May 2018, the UK Serious Fraud Office ("SFO") announced it has charged individuals, none of whom are CIMIC employees, and on June 26, 2018 announced it has charged a company, which is not a member of the CIMIC Group. On July 19, 2019 the SFO announced that one individual had pleaded guilty to charges. Following trials in 2020 and 2021 the individuals were convicted on some charges. However, some of those convictions have been overturned on appeal. None of the juries' guilty findings relate to charges involving the CIMIC Group company contracts. On March 1, 2019, CIMIC entered into an investigation agreement with the Department of Justice ("DOJ"). On October 30, 2019 the US DOJ announced that in March 2019 three individuals not employed by CIMIC pleaded guilty to a charge of conspiracy to violate the Foreign Corrupt Practices Act. On November 18,

2020 the AFP advised CIMIC that it had charged an ex-employee with alleged offences relating to foreign bribery and related matters and on February 23, 2021 the AFP announced it had brought an additional charge in relation to foreign bribery. On January 11, 2021 the AFP informed CIMIC that it had charged a second ex-employee with related offences. That employee has pleaded guilty to a charge of failing to take reasonable precautions to ensure that information provided to directors of CIMIC was not misleading. He has been ordered to pay a penalty of AUD 1,000. The AFP has also indicated it may charge a further ex-employee and that its investigations continue. CIMIC does not otherwise know when the charges will be heard or the outcome of any investigation. No CIMIC Group company has been charged. CIMIC continues to cooperate with all official investigations.

Based on the foregoing, we classify the risk arising from projects and contracts as low overall.

Investment risks

The investment process is governed at HOCHTIEF by an Investment Directive that defines the process, the approval procedure, and the applicable standards and instruments. As investment decisions are generally made under conditions of uncertainty, they frequently entail risk regarding the profitability of an investment—meaning the possibility of future cash inflows and returns from an investment project deviating negatively from the investment scenario, and hence of lower returns over the lifetime of the investment with an adverse impact on HOCHTIEF's financial position. Investment risk typically includes risk relating to mergers and acquisitions and to investments in companies over which HOCHTIEF does not have significant influence.

We classify overall investment risk as low.

Procurement risks

HOCHTIEF's procurement management ensures that only business partners—both subcontractors and suppliers—are selected that meet our high ESG standards. By maintaining a constant watch over the market and close contact with subcontractors, suppliers, and institutions, we ensure that we can quickly spot changes on the procurement market and respond accordingly.

In the U.S. part of the North American market, material prices and availability remained stable, with limited impact from tariffs so far. Steel, aluminum, and copper showed slight movements, while transportation and most chemicals are stable. The shortage of skilled labor continues, particularly in the mechanical and electrical trades, due to growth in the data center market. The increase in tariffs on Chinese electrical equipment, manufactured steel, and aluminum planned for early 2026 is expected to put pressure on MEP and facade systems.

In the Australian market, material prices as well as plant and equipment prices have remained largely stable or declined in 2025, with the exception of concrete and cabling, where prices have continued to rise. It is to be considered that the mainly local supply chain is largely immune to general geopolitical risks. The availability and cost of labor remain the main challenges for procurement and supply chains. Risk sharing and incentivized contract arrangements work well where they are available. The development and use of improved digital tools have helped to manage price variability risk across the operating company.

The European construction industry saw stable trends in material prices in 2025. At the same time, inflation and labor costs continue to exert pressure at the operational level. Driven by the emerging market for data centers in Europe, we are experiencing bottlenecks in mechanical and electrical trades, similar to those in the U.S.

In general, we address price increases and shortages affecting our business with proactive procurement management. Together with our clients and partners, we actively counter these developments and man-age them through our long-standing, strong position in key local markets and the use of risk-minimizing contract models. In the US market, we take the risk of tariffs into account at an early stage in our pricing and coordinate our procurement and advance planning to minimize these risks.

To identify ESG-related risks in our supply chain—in areas such as human rights or the environment—we regularly conduct risk assessments of our business partners and take targeted action to mitigate risk where necessary. Through our extensive business partner prequalification process and partner evaluation in projects both during and after project execution, we stay abreast of market developments as well as the technical and commercial capabilities of our partners. This also includes the sustainability performance of our subcontractors and suppliers.

Our proactive procurement management thus reduces business partner risk and creates alternatives to best meet the needs of our stakeholders. Based on the current global economic situation and anticipated develop-ments as well as on our comprehensive risk management process, we classify HOCHTIEF's overall procurement risk as low.

Overall, we classify HOCHTIEF's operational risk as low. We cannot preclude the eventuality that it may be nec-essary to recognize significant impairment losses on our subsidiaries and associated companies in isolated cases in the future, both in the consolidated financial statements and in the annual financial statements of HOCHTIEF.

Technological risks

HOCHTIEF addresses IT risks at all levels of the organization. Under Supervisory Board oversight and Executive Board responsibility, policies are implemented by an IT security function with the support of specialized security consultants and capable operational service providers. Continuous awareness training ensures compliance by employees in their everyday work. IT service categories are clearly set out in service certificates forming part of our service contracts. Compliance with technical availability, data security, and integrity requirements is ensured by stipulating measurable targets. Steps are taken to ensure adherence to the exacting standards required in the case of mission-critical systems. The deployment of cutting-edge hardware and software coupled with digital and physical access control protect data from unauthorized access. Critical data is kept in separate fire compart-ments inside certified data centers. Regular external penetration tests verify the ability of our firewall systems to withstand cyber attacks. Confidential data and files—for data storage and e-mail, for example—are protected by technical and organizational measures such as the use of encryption systems. We are also vigilant with regard to cyber crime and adapt our measures to the latest threats on an ongoing basis.

Our IT Security Directive, which applies to HOCHTIEF's segments, is continuously refined on the basis of the latest standards and with the support of experts, and is verified by audits both in Germany and internationally. This ensures that the requirements on data security, confidentiality, and availability are met.

Data protection

HOCHTIEF takes the protection of personal data very seriously—for employees, clients, and business partners alike—and consequently pays particular attention to ensuring high standards of data protection when processing such data. Consequently, HOCHTIEF has a well-developed data protection organization, with data protection officers in Germany, the Czech Republic, the United Kingdom, Poland, and Luxembourg. Data protection coordinators assist management in complying with the obligations under the EU General Data Protection Regulation (GDPR) and Group data protection requirements. They are appointed by their companies and work closely with the data protection officers in charge. Support with regard to data protection law is provided by the Legal department.

HOCHTIEF has laid down standards for the handling of personal data at HOCHTIEF Europe in a Group data protection directive as well as in work instructions. Alongside regular training for data protection coordinators and all employees, this covers internal audits to verify compliance with data protection requirements. HOCHTIEF provides information on data protection for all employees on the corporate intranet. Processing of personal data at each HOCHTIEF company is tracked in the record of processing activities.

Personal data is processed on the basis of suitable technical and organizational measures for data security. Where processing is outsourced to service providers, these are subject to a meticulous selection process and monitoring and verification rights secured in a contract processing agreement. HOCHTIEF's data protection coordinators, data protection officers, and Legal department are involved in the process leading to any such agreement. This ensures compliance with high standards of data protection whenever outside service providers are used. In accordance with undertakings they are required to sign by HOCHTIEF, service providers ensure that personal data is processed solely in accordance with statutory requirements.

HOCHTIEF expects all employees to comply with data protection requirements in their everyday work. In order to be able to respond quickly and appropriately in the event of a data breach, HOCHTIEF has implemented an incident reporting process that can also be used anonymously. Any internally reported data breaches are investigated with the involvement of the responsible data protection coordinators, data protection officers, the Legal department and, where necessary, the relevant IT departments. In individual cases, outside legal advice is sought. Without exception, all breaches are exhaustively investigated and assessed. Where applicable, they are reported to the competent supervisory authority within the period required by law. Close cooperation with the supervisory authorities in this regard is a matter of course for HOCHTIEF. Incidents are documented and—if necessary—concluded with an action plan to prevent repeat occurrences as far as possible.

HOCHTIEF has not had any notable data protection incident to date. Given the rapid pace of developments, as well as the many requirements that apply and are subject to ongoing revision, HOCHTIEF will continue to place a commensurate focus on data protection in the future.

We classify technological risks, including data protection risks, as low.

Legal and compliance risks

Complex large-scale projects can involve legal risks. Provisioning has been made where necessary for all risks known to HOCHTIEF associated with legal disputes that are ongoing or are anticipated, legal claims, and official procedures relating to individual large-scale projects.

Compliance risks

Our compliance management system (further information in the Governance section[1]) aims in particular to prevent violations of anti-corruption and antitrust laws before they occur. This is achieved through the implementation of a comprehensive compliance management system that is continuously monitored and improved. Among other things, one focus is on regular workforce training as well as by adopting suitable processes and systematic

[1] The Sustainability Statement is not part of the statutory audit of the annual and consolidated financial statements under Section 317 of the German Commercial Code (HGB).

controls. Corporate Compliance is responsible for establishing appropriate organizational measures to ensure that the company, its bodies, and employees always act in accordance with the applicable legal requirements.

Overall, we classify legal and compliance risks as low.

Social risks

All employees contribute decisively to HOCHTIEF's business success. In this context, our human resources strategy (further information in the Own workforce section[1]) makes a valuable contribution to HOCHTIEF's corporate strategy. The situation on the labor market is challenging, particularly in an international context. Nevertheless, HOCHTIEF is largely successful in meeting its demand for qualified employees. Our primary goal remains to create a strong and positive employer image and to further enhance our appeal to talented individuals from different target groups and with different qualifications. We want to offer a working environment in which people can grow, develop their potential, and make the most of their strengths. With the measures outlined in our Sustainability Plan 2025, we are ensuring that we consistently implement this vision. A systematic survey conducted on the basis of a risk guide captures major risk categories such as skill, motivation, staff turnover, and succession risk together with the potential impacts on HOCHTIEF. The risk management classification scheme in human resources is regularly reviewed for new risks and adapted as necessary.

Occupational safety and health protection

We attach top priority to occupational safety and health protection for our employees (further information in the Own workforce section) because every accident also means human suffering. In addition, effective occupational health and safety prevents project risks, since accidents at work have a negative impact on profitable project execution. Deficiencies in the area of occupational safety can also harm the Company's reputation.

Safety is the foundation underpinning all of our Group's guiding principles. Detailed hazard assessments serve to identify safety risks on project sites and in our offices as well as to counter those risks either preventively or with targeted action. The lost time injury frequency rate (LTIFR) is one of the most important non-financial key performance indicators. This underscores the importance of safety for HOCHTIEF and for this reason is also part of our Sustainability Plan 2025.

Our focus is on proactively avoiding work accidents and workplace-related illness. Regular action days, intranet and poster campaigns as well as training raise employee awareness of issues surrounding occupational safety, health, and environmental protection. This applies in equal measure to the contractors for whom we are legally responsible. Contractors for whom there is no direct legal responsibility are also closely involved in our occupational safety activities.

We classify the risk to our companies and activities with regard to occupational safety and health protection as low.

Human rights

Our efforts with regard to human rights due diligence are directed at mitigating human rights risks and preventing human rights due diligence violations. A human rights risk analysis was carried out in the re-porting year for the HOCHTIEF segments Turner, CIMIC, and Engineering and Construction in order to evaluate material human rights risks and environment-related risks in the construction business. Communications activities such as human rights trainings serve to increase employee awareness and sensitivity with regard to this subject. Human rights risks were also involved in project audits in the reporting year to ensure the effectiveness of HOCHTIEF's Human Rights Corporate Management System.

We classify the risk to our company and activities with regard to social risks as low.

[1] The Sustainability Statement is not part of the statutory audit of the annual and consolidated financial statements under Section 317 of the German Commercial Code (HGB).

Environmental risk

Our risk management takes into account environmental risks with a direct or indirect bearing on HOCHTIEF's business activities, and likewise risks to our stakeholders and the environment—air, water, and soil purity, health, species conservation, etc.—resulting from our products and services. These are taken into account as project risks.

Additional risk factors relate to climate change, including phenomena such as the proliferation of extreme weather events such as storms, increased precipitation, extreme heat waves, and droughts. At HOCHTIEF, climate risk is defined as damage caused by climate events that potentially has negative impacts on the qualitative or quantitative attainment of business targets. In order to identify the impacts of climate change for HOCHTIEF as a whole and to adequately assess the risks involved, we make use of external frameworks such as that of the Task Force on Climate-related Financial Disclosures (TCFD). HOCHTIEF has carried out a comprehensive climate scenario analysis based on internationally recognized and science-based institutions. Please refer to the ESRS 2 and Climate change sections[1] of the Sustainability Statement for further details on the scenario models used, the methodology, and HOCHTIEF's corresponding actions and adaptation strategies in connection with climate change mitigation and decarbonization.

The physical climate risk of the project activities is treated as part of project risks because it is directly connected to project execution. Our construction projects can be held up by exceptional weather conditions such as heavy rain, floods, storms, and extreme heat and cold. This can lead to reduced productivity. It can also endanger the safety of employees, subcontractors, and third parties. For this reason, preventive and protective measures are taken in our projects. The cost risk associated with any damage that can still occur in a construction project due to unusual or exceptional weather events is assessed at project level and generally transferred to insurers.

Prevention of environmental incidents is also a top priority, as these can have a lasting negative impact on the environment, people, and wildlife, and can also adversely impact project profitability and the Company's reputation. As part of our environmental management, we identify potential hazards and factor them into project planning. We also record and analyze environmental accidents in order to be able to take preventive measures in the future.

In HOCHTIEF's core business of construction, material GHG emissions are generated in activities in the upstream and downstream value chains (Scope 3 emissions). This brings with it a major responsibility in terms of impact management with our clients, partners, and subcontractors, while at the same time sustainable business practices offer an opportunity to contribute actively toward climate change mitigation.

We rate the risks in connection with environmental issues as low.

Climate change drives increasing demand for resilient infrastructure and adaptive measures, including built structures for renewable energy, flood control, water supply and wastewater management, reconstruction of infrastructure damaged by extreme weather events, and investment in more resilient infrastructure. These examples demonstrate the new business opportunities that HOCHTIEF considers itself well positioned to exploit on the strength of its capabilities. We already successfully serve the growing market for sustainable buildings and infrastructure projects—an area in which we see additional growth potential.

[1] The Sustainability Statement is not part of the statutory audit of the annual and consolidated financial statements under Section 317 of the German Commercial Code (HGB).

Reputation risk

In its projects, HOCHTIEF works closely with a wide variety of stakeholder groups on an ongoing basis in order to identify local needs and requirements and respond accordingly. Stakeholder information and communication are consequently a standard part of project management and also serve to prevent risks so as, for instance, to avoid delays in project execution.

Regular, detailed market research on the Group's reputation and image provides additional indications as to how it is perceived in the public eye.

We rate the risks in connection with reputation issues as low.

Financial risk

Financial management has the task of coordinating financial requirements within the Group and safeguarding its long-term financial independence at all times. To this end, HOCHTIEF proceeds on the foundation of sound Group financing secured for the years ahead and works to limit financial risk. Financial activities in the HOCHTIEF Group are conducted on the basis of a Group-wide financial directive. The general financial directive is supplemented with functional, operating-level work instructions. They also govern the use of financial instruments and derivatives, which may only be entered into for hedging purposes.

The primary objective of financial risk management is to safeguard Group liquidity at all times. For the HOCHTIEF Group, liquidity not only means solvency in the strict sense, but also the long-term availability of the financial headroom needed for the basic operating business (such as collateral management/bank guarantees). Safeguarding liquidity at all times therefore requires integrated management of all Group financial resources, including its credit standing and hence borrowing capacity.

A further objective is to minimize financial risks affecting the value and profitability of the HOCHTIEF Group (currency, interest rate, exchange rate, and commodity price risks of all kinds, as well as counterparty risks). HOCHTIEF uses largely centralized liquidity structures—notably cash pooling—to pool liquidity at Group level, among other things to avoid cash flow bottlenecks at the level of individual entities.

Principally HOCHTIEF's operating companies have natural hedges, i.e. revenues and costs typically occur in the same currency, however, in some cases HOCHTIEF is exposed to currency risk (transaction risk) if receivables, liabilities, cash and cash equivalents, marketable securities, and pending transactions are in currencies other than the functional currency of the Group company concerned in each instance. Currency derivatives, mainly forward exchange contracts, are used to hedge against fluctuations in these payments or items caused by exchange rates.

HOCHTIEF is exposed to interest rate risk through financial items primarily consisting of interest-bearing marketable securities and financial liabilities on the liabilities side of the balance sheet. Two approaches are used to minimize this risk. Firstly, the Company uses natural hedging, meaning that it eliminates contrary interest rate risk from non-derivative financial instruments on the assets and liabilities sides. The second method is to use interest rate derivatives.

As a significant component of counterparty risk, the HOCHTIEF Group is exposed to credit risk from operations and from certain financing activities. HOCHTIEF performs risk management for operations by continuously monitoring trade receivables at operational company level. If a specific credit risk is detected, it is countered by recognizing an individual impairment in the necessary amount.

In addition, a strict separation of responsibilities is maintained within the Group between financing and trading activities on the one hand and the corresponding control and settlement activities on the other. All trading transactions are compulsorily subject to dual control at minimum. Compliance with all directives and requirements is regularly checked by the internal audit function.

Potential financial risks are tracked and monitored via the monthly reporting system. This includes cash budgeting with a long-term planning horizon (18 months) and thus provides the basis for coordinating and securing finance requirements at Group level. In addition to known amounts due under existing Group financing arrangements, cash budgeting also includes budgeting for cash inflows and outflows. The impacts of specified stress scenarios on the cash position are also presented.

No financial covenants feature in the respective documentation to HOCHTIEF Aktiengesellschaft's main financing instruments, comprising capital market and bank borrowing facilities, both syndicated and bilateral.

Largely covered by plan assets, pension obligations at HOCHTIEF are backed by sound asset holdings. Plan assets comprise a range of different asset classes based on balanced strategic portfolio allocation as well as the matching of portfolio structure to pension durations and the expected development of pension obligations. This broadly diversified investment strategy puts HOCHTIEF in a position to offset, to the greatest possible extent, capital market movements that affect the value of plan assets and any pension plan deficit. Changes in measurement parameters such as the discount factor or life expectancies can also lead to an increase in the pension obligations as measured on actuarial principles.

In light of our financial management, we assess our overall financial risk as low.

Tax risks

HOCHTIEF places great emphasis on compliance with applicable local laws and regulations, including tax legislation. This is ensured at the operational unit level by our own employees and supported by external expertise. At HOCHTIEF holding company level, overarching tax matters are also managed by our own internal tax department, which is also supported by external expertise as needed.

We rate tax risks to our company as low.

Executive Board's overall assessment of opportunities and risks

In the 2025 reporting year, the Group continued to work on further improving its overall risk situation by increasing the focus on collaborative and lower-risk contract forms. HOCHTIEF will continue to work intensively to optimize its risk position even further. The risk management approach is kept under constant review and adjusted as necessary to preclude any volatility in HOCHTIEF's key performance indicators.

Systematic implementation of our uniform Group-wide strategy helps HOCHTIEF exploit opportunities as they arise. We expect to be able to counter potential risks and thereby avoid or reduce the negative impact on our business activities.

From the current perspective, based on their probability and potential impact on HOCHTIEF, the risks described in the foregoing report do not cast any doubt over the HOCHTIEF Group's ability to continue as a going concern.

Based on our analyses and the sound development of the business in 2025, we continue to assess HOCHTIEF's risk-bearing capacity as robust.

Report on relations with affiliated companies in accordance with Section 312 of the German Stock Corporations Act (AktG)

As there is no control agreement with our majority shareholder ACS, Actividades de Construcción y Servicios, S. A., the Executive Board of HOCHTIEF Aktiengesellschaft is required to prepare a report on relations with affiliated companies in accordance with Section 312 of the German Stock Corporations Act (AktG). This report concludes with the following statement from the Executive Board:

“We hereby declare that, according to the circumstances known to us at the time the transactions were entered into with the controlling company or any of its affiliates pursuant to Section 312 AktG, our company received appropriate consideration for each transaction.

No reportable measures were taken or not taken in the reporting period at the instigation or in the interests of the controlling company or any of its affiliates.“

Notes to the Consolidated Financial Statements

1. Accounting policies

General information

The Consolidated Financial Statements are prepared in accordance with IFRS® Accounting Standards as adopted by the EU and with supplementary provisions of German commercial law applicable under Section 315e (1) of the German Commercial Code (HGB). There have been no changes to the accounting policies during the reporting year.

Alongside the Consolidated Statement of Earnings, the Consolidated Statement of Comprehensive Income, the Consolidated Balance Sheet, and the Consolidated Statement of Cash Flows, the Consolidated Financial Statements also include a Consolidated Statement of Changes in Equity. Segment reporting is provided in these Notes.

For purposes of understandability, various items are combined in the Consolidated Balance Sheet and in the Consolidated Statement of Earnings. These items are broken down into their constituents and commented on elsewhere in these Notes to the Consolidated Financial Statements. The Consolidated Statement of Earnings is presented using the nature of expense method of analysis.

The Consolidated Financial Statements are presented in euros.

HOCHTIEF Aktiengesellschaft, Essen, Germany, court of registration: Essen District Court, Commercial Register (Handelsregister) number HRB 279 (“HOCHTIEF”), is included in the Consolidated Financial Statements of ACS Actividades de Construcción y Servicios, S.A., Madrid, Spain (“ACS”). The latter prepares the Consolidated Financial Statements for the largest and smallest group of companies. The Consolidated Financial Statements of ACS Actividades de Construcción y Servicios, S.A., Madrid, Spain, are published in the register of Comisión Nacional del Mercado de Valores; the Consolidated Financial Statements of HOCHTIEF Aktiengesellschaft are published in the Company Register (Unternehmensregister).

The Consolidated Financial Statements relate to the 2025 reporting year, comprising the reporting period from January 1 to December 31, 2025.

The Executive Board of HOCHTIEF Aktiengesellschaft released the Consolidated Financial Statements for publication on February 18, 2026. They are to be approved at the Supervisory Board meeting on February 19, 2026.

Basis of consolidation

The Consolidated Financial Statements include HOCHTIEF Aktiengesellschaft as well as fundamentally all German and foreign subsidiaries under its direct or indirect control. HOCHTIEF Aktiengesellschaft is normally considered to control a company when it holds the majority of the voting rights. This generally goes hand in hand with a majority shareholding. Nine companies (prior year: eleven companies) are fully consolidated by virtue of contractual arrangements. Associates and joint ventures are accounted for using the equity method. Companies in which HOCHTIEF Aktiengesellschaft holds a majority of voting rights but over which it exercises joint control by contractual arrangement with other parties are likewise accounted for using the equity method unless classified as joint operations.

Holdings in subsidiaries or associated companies or joint ventures deemed to be of minor overall significance from a Group perspective are not consolidated and are accounted for in accordance with IFRS 9.

A number of the subsidiaries included in the Consolidated Financial Statements make partial use of the exempting provisions in either Section 264 (3) or Section 264b of the German Commercial Code. A list of the companies that make use of these exemptions is included in Note 42.

The Consolidated Financial Statements as of December 31, 2025 include HOCHTIEF Aktiengesellschaft and a total of 43 German and 432 foreign consolidated companies as well as four consolidated special-purpose investment funds (Spezialfonds). The number of consolidated companies decreased by seven compared with the previous year. The number of special-purpose investment funds stayed the same. A total of three German and 41 foreign companies were consolidated for the first time in the reporting year. The additions were in the CIMIC segment (22), the Turner segment (17), the Engineering and Construction segment (4) and the Corporate segment (1). Three domestic and 48 foreign companies were removed from the consolidated group. The companies removed from the consolidated group relate to the CIMIC segment (26), the Engineering and Construction segment (18), the Turner segment (6) and the Corporate segment (1). An entity is generally added to or removed from the consolidated group at the time the equity stake in the entity is acquired or disposed of. The foreign companies removed include Flatiron Construction Corporation ("Flatiron"), Wilmington, and a further 14 subsidiaries.

24 affiliated companies of minor overall significance to the Group's financial position and results of operations were not consolidated (prior year: 21 affiliated companies). Their combined sales represented less than 1% of consolidated sales.

20 domestic and 43 foreign associates were accounted for using the equity method. This number declined by a total of 35 companies. The addition of 18 companies was offset by 53 removals. The additions were in the CIMIC segment (5) as well as the Engineering and Construction segment (5) and the Turner segment (8). The removals relate to the CIMIC segment (29), the Engineering and Construction segment (15) and the Turner segment (9). Due to their minor overall significance, a further nine companies were not accounted for using the equity method.

A total of 132 joint operations are included in the Consolidated Financial Statements on a proportionate basis. These relate to the CIMIC segment (79), the Turner segment (52) as well as the Engineering and Construction segment (1) (2024: 154 joint operations).

Acquisitions

Dornan Engineering

On July 24, 2024, Turner signed an agreement to acquire 100% of the shares in Dornan Engineering, Cork, Ireland ("Dornan"). Dornan is an engineering company with offices in Ireland, the UK, continental Europe and the Nordic countries, and provides services for complex large-scale projects for clients primarily in the advanced-technology sector. The transaction was closed on January 7, 2025. From this date, Turner exercises control over Dornan in accordance with IFRS 10 and the acquisition was included in the HOCHTIEF Group in the first quarter of 2025 in accordance with IFRS 3.

The agreed total purchase consideration of EUR 410 million, which has been hedged against exchange rate changes, was paid in cash at the time of acquisition on January 7, 2025. The purchase is not subject to any further contingent consideration.

The following table shows the completed purchase price allocation and the total amount of consideration attributable to goodwill:

(EUR million)

Fair value of assets and liabilities of Dornan	
Property, plant and equipment	8
Intangible assets	98
Cash and cash equivalents	78
Trade receivables, other receivables and other assets	267
Trade payables, other liabilities and provisions	(303)
Total fair value of net assets acquired	**148**
Cash purchase price (including foreign exchange hedging)	436
Goodwill	**288**

The valuations for the purchase price allocation are carried out by external and independent experts.

The goodwill is attributable to Dornan's expertise and future market opportunities in Europe. Together with Dornan and using the Group's existing local capacities, Turner intends to offer its clients in Europe complete turnkey solutions and thus accelerate its strategic growth in Europe. In this context, Turner will implement its low-risk construction management business model in the fast-growing advanced-technology market. The goodwill is not deductible for income tax purposes.

The transaction costs incurred in connection with the acquisition are not material and were recognized as an expense in the Consolidated Statement of Earnings under "other operating expenses".

The contribution to the Group from January 1, 2025 to the end of the reporting period on December 31, 2025 corresponded to revenue of EUR 1,214 million and an amount of EUR 93 million to consolidated net profit in the Turner segment.

Yorizon

On October 9, 2025, HOCHTIEF GC Beteiligungsgesellschaft mbH ("HTGC") acquired a 50% stake in Yorizon GmbH & Co.KG, Berlin, Germany ("Yorizon") in addition to a shareholder loan. Yorizon is a provider of sustainable cloud computing and green IT solutions. From the Group's point of view, this reflects the importance of the market for decentralized data infrastructures and its growth ambitions. With the acquisition, Yorizon is streamlining its decision-making structures in order to be able to respond more quickly to the increasing demand for data protection-compliant and regional cloud solutions.

The acquisition was accounted for as a business combination achieved in steps in accordance with IFRS 3: A purchase price of around EUR 0.05 million was paid for the acquisition of the stake, which does not contain any conditions precedent. The fair value of Yorizon's identifiable net liabilities acquired by the Group was EUR 14.2 million. The values of acquired assets and liabilities are fair value and include property, plant and equipment and intangible assets, with the exception of a contract with unfavorable terms compared to the market at the time of acquisition. The fair value of the Group's shares already held at the time control was gained was determined with the support of external experts.

The goodwill amounts to a total of EUR 53 million and relates to the future earning power and expertise of Yorizon and is not tax deductible. HTGC's existing 50% stake in Yorizon resulted in a revaluation gain of EUR 22 million, which is reported under other operating income. The contribution to the Group from the date of acquisition to the end of the reporting period ended December 31, 2025 was not material for the Group.

Thiess Group

On April 23, 2024, CIMIC Group Limited, New South Wales, Australia (“CIMIC”) acquired an additional 10% interest in the mining service company Thiess Group Holdings Pty Ltd, New South Wales, Australia (“Thiess”), consisting of ordinary shares, Class A preference shares, and Class C preference shares previously held by funds

advised by Elliott Advisors (UK) Ltd, London, United Kingdom (“Elliott”). The acquisition for a cash purchase price of EUR 194 million increased CIMIC’s ownership of Thiess to 60%. CIMIC and Elliott continue to be equally represented on the Thiess Board of Directors. Under the revised shareholders agreement, however, CIMIC has greater control over the company’s day-to-day operations. Consequently, CIMIC has the ability to direct Thiess’ relevant activities and, as such, Thiess is a controlled entity under IFRS. Elliott’s retained minority interest is reported in the consolidated balance sheet under “non-controlling interest”.

The accounting for the acquisition and its purchase price allocation were finalized before the issuance of the Group’s 2024 Consolidated Financial Statements and can be found in that report. The total purchase consideration was determined to be EUR 1,725 million, of which none was deferred. It comprised the cash consideration paid, the interests previously held by CIMIC remeasured at fair value, and the total value of the non-controlling interest. The fair value of the identifiable net liabilities of Thiess acquired by the Group amounted to EUR 175 million. This resulted in a goodwill of EUR 1,900 million.

Disposals

Flatiron

HOCHTIEF contributed its shares in Flatiron Construction Corporation („Flatiron“), Wilmington to the combined company Flatiron Dragados USA, Inc., New York, and in return received 38.2% of the shares in the new combined holding company Flatiron Dragados Engineering and Construction S.L. ("FlatironDragados"), Madrid. In parallel, Dragados S.A. ("Dragados”), Madrid, contributed its North American civil construction activities into FlatironDragados against shares so that the remaining 61.8% shares are being held by ACS. To determine this exchange ratio, external valuations for both Flatiron and Dragados were prepared by independent experts and finalized on July 21, 2024. These valuations were carried out based on the DCF method, taking into account earnings-based methods and the analysis of comparable transactions in the industry. The exchange ratio was determined between the parties based on a fair value of Flatiron of USD 665 million. At this value, HOCHTIEF Americas GmbH initially acquired the shares in Flatiron from HOCHTIEF USA Inc. and subsequently contributed them to Flatiron Dragados USA, Inc. via a merger transaction on January 17, 2025. HOCHTIEF has lost control over Flatiron and is therefore required to deconsolidate the consolidated assets and liabilities of Flatiron and to account for the investment in FlatironDragados as an equity-method investment in accordance with IAS 28 as of January 17, 2025.

The assets and liabilities of FlatironDragados are revalued to update the acquisition costs of the investment in FlatironDragados using the equity method in accordance with IAS 28. The purchase price allocation required for this has been finalized at the end of the financial year and the company's net profit accounted for at equity was updated taking into account the effects of this purchase price allocation.

The transaction resulted in a profit in 2025 that was calculated as follows: The total amount of the non-cash consideration transferred of USD 665 million or EUR 648 million (fair value of Flatiron) less the carrying amount of Flatiron's net assets of EUR 475 million and the reclassification of changes in equity recognized directly in equity of a negative EUR 27 million resulted in a gain of EUR 146 million, which is reported under other operating income in the consolidated statement of earnings.

UGL Transport

On December 1, 2025 CIMIC entered into a binding arrangement with Sojitz Corporation, Tokyo, Japan (“Sojitz”), regarding the acquisition by Sojitz of a 50% equity interest in the UGL Transport Business, Sydney, Australia (“UGL Transport”), and the formation of a joint venture with Sojitz over UGL Transport (“UGL Transport JV”). Under the terms of the sale agreement and other contractual arrangements entered into with Sojitz CIMIC can no longer unilaterally control UGL Transport at December 31, 2025. At December 31, 2025 the transaction was subject to Foreign Investment Review Board approval which was considered to be highly probable and procedural, and the sale formally completed on January 19, 2026 (refer to Note 1 (section: Judgements made by management in applying the accounting policies)).

The transaction has been recorded as a disposal of controlled entities in accordance with IFRS 10 and the recognition of an interest in a joint venture entity with total consideration receivable net of transaction costs comprising

cash consideration of EUR 259 million and non-cash consideration of EUR 160 million being the fair value of the 50% retained interest in UGL Transport JV.

As part of the transaction, CIMIC is required to obtain partner change of control consents (the “joint venture consents”) for certain at equity accounted investments (the “JV investments”) that were owned by UGL Transport prior to the transaction. An advance payment of EUR 131 million was included in the total transaction consideration, equal to the agreed value in aggregate of the JV investments, and the Group assumed a corresponding liability to UGL Transport JV of the same amount. The nature of these consents and the related contractual arrangements mean that each JV investment will be transferred to UGL Transport JV at the agreed value, as a settlement of the advance payment received, following receipt of the relevant joint venture consent. Should a joint venture partner pre-empt the transfer of any JV investment to UGL Transport JV, the JV investment would then be transferred to the joint venture partner at the same price agreed in the transaction, and the Group would use the cash received to refund UGL Transport JV for the advance payment received. The joint venture consents were still in progress at December 31, 2025.

In parallel, as part of the process for the joint venture consents, CIMIC contractually waived certain of its material rights and voting powers in respect of the joint ventures prior to December 31, 2025, resulting in no longer having joint control or significant influence over the joint ventures (refer to Note 1 (section: Judgements made by management in applying the accounting policies)). The JV investments were reclassified from at equity accounted investments to financial investments measured at fair value through profit and loss in accordance with IFRS 9, resulting in a revaluation gain of EUR 84 million recognized in other operating income as part of the net gain on sale of UGL Transport. Further, in accordance with the requirements of IFRS 5, the JV investments were reclassified as assets held for sale as December 31, 2025 as their carrying amount will be recovered through sale.

The table below presents the accounting impacts of the transaction, including the calculation of the net gain on disposal of the controlling interest in UGL Transport and the related reclassification of the JV investments to assets held for sale pending the joint venture consents.

(EUR million)

Net gain before tax	
Total cash consideration receivable net of transaction costs [1,2]	259
Fair value of retained joint venture interest in UGL Transport JV (non-cash consideration)	160
Less: Liabilities assumed in respect of JV investments classified as assets held for sale	(131)
Less: Carrying amount of net assets disposed (excluding JV investments transferred to assets held for sale)	(207)
Recycling of reserves	–
Fair value of JV investments classified as assets held for sale	131
Less: Carrying value at date of discontinuance of equity method	(47)
Net gain before tax recognized in other operating income	**165**
Carrying value of assets and liabilities of entities disposed	
Cash and cash equivalents	20
Trade and other receivables	48
Inventories	115
Deferred taxes	14
Property, plant and equipment	62
Intangibles	51
Trade and other payables	(58)
Provisions	(20)
Lease liabilities	(25)
Net assets disposed	**207**
Cash flows resulting from sale	
Cash consideration net of transaction costs	120
Cash disposed	(20)
Net cash inflow	**100**

[1] The cash consideration includes consideration of EUR 101 million received on January 19, 2026 and contingent consideration of EUR 59 million. The contingent consideration is expected to be received within 12 months of the transaction date, once change of control consents for certain key contracts have been obtained from the relevant counterparties, and has been measured at the fair value of the consideration expected to be received on contract novation.
[2] As at December 31, 2025, certain transaction costs remain unpaid and are accrued in trade payables and other liabilities.

Leakes Road Data Centre

During the year, ACS and Global Infrastructure Management LLC (“Global Infrastructure Partners”), New York, an investment company controlled by BlackRock, Inc., New York, entered into a purchase and contribution agreement to form a 50-50 joint venture dedicated to developing and operating next-generation data centres worldwide. Under the terms of the agreement, CIMIC has sold its investment in Leakes Road DC Holdings Pty Ltd, New South Wales, Australia, and its subsidiaries (“Leakes Road”) to the joint venture.

The terms of the executed sales agreement mean that CIMIC no longer controls Leakes Road, and accordingly the transaction has been recorded as a disposal of controlled entities in accordance with IFRS 10 on December 31, 2025, when the completion of the conditions precedent became administrative in nature. The sale formally completed on January 9, 2026.

The disposal has been accounted for under the requirements of IFRS 10 as follows: the total consideration receivable in cash was EUR 283 million. The carrying value of the Leakes Road net assets was EUR 116 million (including EUR 112 million value of investment properties and other assets of EUR 4 million) and resulted in a gain net of transaction costs of EUR 146 million on disposal. The net cash flows resulting from the sale during the year are EUR 131 million being cash consideration of EUR 135 million less cash disposed of EUR 4 million.

Included in the total consideration receivable in cash is the fair value of contingent consideration of EUR 148 million. Per the sales agreement, the contingent consideration is deferred and contingent on achieving predefined commercial milestones. A probability-weighted cash flow method was used to determine the present value of the contingent consideration. As at December 31, 2025, certain transaction costs remain unpaid and are accrued in the trade payables and other liabilities.

Assets held for sale

As part of the transaction to dispose of 50% of UGL Transport an advance payment was received for certain investments in joint ventures (the "JV investments") for which change of control consents were in progress at December 31, 2025. Change of control consents are expected to be obtained during the period to December 31, 2026. As a result, the JV investments with fair value of EUR 130.7 million were reclassified as held for sale under IFRS 5 at December 31, 2025, as the sale is expected to be completed within one year from the reporting date.

In addition, the CIMIC segment includes EUR 13.9 million in assets held for sale, which are attributable to investment properties.

The assets and liabilities of Flatiron classified as held for sale as at December 31, 2024 were deconsolidated in the first quarter of 2025 due to the loss of control over Flatiron.

Consolidation policies

The financial statements of German and foreign companies included in the Consolidated Financial Statements are prepared in accordance with uniform Group accounting principles. All business combinations are accounted for using the acquisition method. Business combinations are measured at the acquisition date by allocating the consideration given to the acquired subsidiary's net assets measured at fair value. Transaction costs arising in connection with such acquisitions are recognized directly as expense. All assets, liabilities, and contingent liabilities of an acquired subsidiary that satisfy the recognition criteria are measured at full fair value regardless of any minority interest. In accordance with the optional treatment under IFRS 3, non-controlling interest is measured at the acquisition date at either fair value or the present ownership instruments' proportionate share in the recognized amounts of the acquiree's net identifiable assets. Intangible assets are recognized separately from goodwill if they are separable from the reporting entity or arise from contractual or other legal rights. Any remaining positive difference is recognized as goodwill. Goodwill is not subjected to amortization, but is tested instead for impairment in accordance with IAS 36 on an annual basis and whenever there are indications that the carrying book value may be impaired. Any remaining negative difference arising from the initial measurement is recognized in profit and loss. On divestment, a pro rata share of the divesting division's goodwill is taken into account when measuring disposal proceeds.

Income, expenses, receivables, and liabilities between consolidated companies are eliminated. Intercompany profits and losses are eliminated unless they are of minor significance. Any impairment losses recognized for consolidated companies that are included in the consolidated financial statements are reversed.

Equity-method investments include the Group's associates and joint ventures. Any goodwill increases the carrying amount of an investment. Like other goodwill, goodwill on equity-method investments is not amortized. Reductions in carrying amount due to impairment are included in the share of profits and losses of equity-method associates and joint ventures. The financial statements of all equity-method investments are prepared in accordance with uniform Group accounting policies.

Currency translation

For currency translation purposes, the following exchange rates have been used for the main Group companies outside the euro area:

	Annual average		Daily average at reporting date	
(All rates in EUR)	**2025**	2024	**2025**	2024
1 U.S. dollar (USD)	0.88	0.93	0.85	0.97
1 Australian dollar (AUD)	0.57	0.61	0.57	0.60
1 British pound (GBP)	1.17	1.18	1.15	1.21
100 Polish złoty (PLN)	23.60	23.26	23.72	23.39
100 Czech koruna (CZK)	4.06	3.98	4.14	3.97

In their separate financial statements, Group companies account for transactions denominated in foreign currency using the average exchange rate on the day of recording the transaction. Exchange gains or losses up to the reporting date on the measurement of foreign currency-denominated monetary assets or liabilities are included in other operating income or other operating expenses at the average exchange rate on the reporting date. Currency translation differences relating to a net investment in a foreign company are accounted for in accumulated other comprehensive income until the company is sold. This includes foreign currency receivables from fully consolidated Group companies for which settlement is neither planned nor likely to occur in the foreseeable future and which therefore resemble equity.

Financial statements of foreign companies are translated by applying the functional currency approach. As all companies outside the euro zone operate autonomously in their own national currencies, their balance sheet items are translated into euros in accordance with IAS 21 using the average exchange rate prevailing on the reporting date. The same method is used to translate the equity of equity-method foreign associates following equity-method adjustment. Differences from the previous year's translated amount are recognized in other comprehensive income and are reversed to income or expense on sale of the equity interest. Goodwill of commercially independent foreign Group entities is translated at the exchange rate prevailing on the reporting date. Income and expense items are translated into euros using the annual average exchange rate.

Accounting policies

Revenue from Contracts with Customers

Sales are accounted for in the HOCHTIEF Group net of VAT and other taxes as well as expected reductions such as trade discounts and rebates. Revenue under construction contracts as well as under construction management and service agreements is recognized as described in the following.

The contractual terms of **construction contracts** in the HOCHTIEF Group are predominantly based on projects (contracts) containing a single performance obligation. Contracts generally involve various interrelated activities that are required as part of the construction process. Cumulative performance to date, including the proportionate share of net profit, is generally recognized as sales over time. Project progress is mainly determined using the input method (cost-to-cost method).

Contracts are recognized as **contract assets** in trade receivables or as **contract liabilities** in trade payables according to the relationship between the HOCHTIEF Group's performance and the customer's payments. If cumulative contract performance (contract costs and contract earnings) exceeds progress payments in a given construction contract, the project is presented as a contract asset. Where the net amount after deduction of progress payments received is negative, the difference is recognized as a liability and presented under contract liabilities. Netting is carried out at project level. Contract assets are realized within one operating cycle at the HOCHTIEF Group. In accordance with IAS 1, they are therefore included in current assets even if realization of the entire receivable or performance of the construction contract extends over more than twelve months. Part-performance already invoiced is accounted for in trade receivables.

Contract income is recognized in accordance with IFRS 15 as the income stipulated in the contract plus **contract modifications**. Such modifications also include change orders, which are taken into account in revenue to the extent that there is an enforceable claim. Change orders may take the form of contractual clauses customary in the industry concerning the right to remuneration for unauthorized but necessary changes (such as in response to unforeseen events) or to the right to reimbursement of additional costs in the event that the client is at fault (such as disruption to the construction process). Enforceable claims are either expressly recognized by the client or an assessment is made as to whether there is a basis for a claim against the client. Where the assessment is based on judgment, the additional revenue it warrants is estimated. Such revenue is estimated based on the principles for accounting for contracts with variable consideration. An experience-based expected value including future price reductions/discounts is additionally reduced, on the basis of the rules on accounting for constraint requirements, to an amount for which it is highly probable that a significant reversal of revenue will not occur. Where modifications in design or contract requirements are entered into, the transaction price is updated to reflect them.

Revenue from **construction management** and **service agreements** arises from maintenance and other services, which may involve a range of services and processes. If different services are closely related, they comprise a single performance obligation and are performed over time. The related revenues are therefore recognized in the HOCHTIEF Group with progress over time, which is mainly determined using the input (cost-to-cost) method. As with revenue from construction contracts, there are also incentives, variations, and claims that are subject to the same requirement of only recognizing revenue to the extent it is highly probable that there will be no significant cancellations.

Contract costs incurred during a tender process are capitalized if they are both expected to be recovered and either would not have been incurred if the contract had not been won or if they are intrinsic to the delivery of the project.

Costs incurred prior to the commencement of a contract (contract fulfillment costs) may arise due to mobilization/site setup costs, feasibility studies, environmental impact studies, and preliminary design activities as these are costs incurred to fulfill a contract. Where these costs are expected to be recovered, they are capitalized and amortized over the course of the contract consistent with the transfer of service to the customer. Where the costs, or a portion of these costs, are reimbursed by the customer, the amount received is recognized as deferred revenue and allocated to the performance obligations within the contract and recognized as revenue over the course of the contract.

The HOCHTIEF Group does not have any contracts where the period up to the transfer of the promised goods or services to the customer represents a **financing component**. As a consequence, the Group normally does not adjust any of the transaction prices for the time value of money.

Generally, construction and services contracts include **defect and warranty periods** following completion of the project. These obligations are not deemed to be separate performance obligations and are therefore estimated and included in the total costs of the contracts. Where required, amounts are recognized in accordance with IAS 37 under provisions.

For **onerous contracts**, in accordance with IAS 37, a provision for onerous contracts is recognized for the difference between the expected cost of fulfilling a contract and the transaction price where the forecast costs are greater than the forecast revenue.

Items on the Consolidated Balance Sheet

Intangible assets are reported at amortized cost. All intangible assets have a finite useful life with the exception of company names recognized as assets on initial consolidation and of goodwill. Intangible assets include concessions and other licenses with useful lives of up to 30 years. These are amortized according to the pattern of consumption of economic benefits. They also include future earnings from additions to the order backlog arising from business acquisitions; these are amortized over the period in which the corresponding work is billed. Intangible assets further encompass software for commercial and engineering applications, which is amortized on a straight-line basis over three to ten years, and entitlements to various financing arrangements with banks amortized over a maximum of seven years in accordance with the term of the arrangement. Estimated useful lives and depreciation methods are reviewed annually.

Company names and goodwill are not subject to amortization. They are tested instead for impairment in accordance with IAS 36 on an annual basis and whenever there are indications that they may be impaired. The company names recognized in the Turner, CIMIC, and Engineering and Construction segments were classified as intangible assets with an indefinite useful life as they do not have a product life cycle and are not subject to technical, technological, or commercial depletion or any other restriction.

Capitalized development costs are reported in intangible assets and amortized on a straight-line basis over five years.

Property, plant and equipment is carried at depreciated cost. Only amounts directly attributable to an item of property, plant or equipment are included in cost. Borrowing costs are included in cost in the case of qualifying assets. Property, plant and equipment is normally depreciated on a straight-line basis, except in the resource services business, where depreciation is mostly recognized on an activity basis.

Items of property, plant, machinery and equipment typically encountered in the HOCHTIEF Group are depreciated on a straight-line basis over the following uniform useful lives:

	No. of years
Buildings and investment properties	20–50
Technical equipment and machinery; transportation equipment	3–10
Other equipment and office equipment	3–10
Right-of-use assets	2–70

Estimated useful lives and depreciation methods are reviewed annually.

Investment properties are stated at amortized cost. Transaction costs are included on initial measurement. The fair values of investment properties are disclosed in the Notes. The fair values are measured using internationally accepted valuation methods, such as taking comparable properties as a guide to current market prices or by applying the discounted cash flow method. As with property, plant and equipment, investment properties are normally depreciated using the straight-line method.

Impairment losses are recognized for intangible assets (including goodwill), property, plant and equipment, or investment properties if their recoverable amount falls below their carrying amount. The recoverable amount of an asset or cash-generating unit is defined as fair value less cost of disposal or value in use, whichever is higher. Impairment testing may require assets and, in some cases, liabilities to be grouped into cash-generating units. For goodwill, impairment testing is performed on cash-generating units corresponding to the HOCHTIEF segments that feature in segmental reporting. For any asset that is part of an independent cash-generating unit, impairment is determined with reference to the recoverable amount of the unit. If the recoverable amount of a cash-generating unit falls below its carrying amount, the resulting impairment loss is allocated first to any goodwill belonging to the unit and then to the unit's other assets, normally pro rata on the basis of the carrying amount of each asset. Except in the case of goodwill, impairment charges are reversed (up to a maximum of amortized cost) when the impairment ceases to exist.

A **joint arrangement** is an arrangement in which two or more parties have joint control. The parties to a joint arrangement classify it as a joint operation or a joint venture depending on their respective rights and obligations. In a joint operation, the parties have direct rights to the assets and direct obligations for the liabilities relating to the arrangement. The HOCHTIEF Group recognizes assets, liabilities, revenues, and expenses, in relation to its interests in a joint operation, relative to the Group's rights and obligations. In a joint venture, where the parties have rights to the net assets arising from the arrangement, the parties each account for their interests in the joint venture using the equity method.

Equity-method investments are stated at cost, comprising the acquired equity interest in an associate or joint venture plus any goodwill. The carrying amount is increased or decreased annually to recognize the Group's share of after-tax profits or losses, any dividends, and other changes in equity. The full carrying amount is tested for impairment in accordance with IAS 36 whenever there are indications that it may be impaired. If the recoverable amount of an equity-method investment is less than its carrying amount, an impairment loss is recognized for the difference. Any subsequent reversal of an impairment loss is recognized in profit or loss. When an equity-method investment changes status to a financial asset in accordance with IFRS 9, the carrying amount at the date the equity method was discontinued is subtracted from the fair value of the retained interest on initial recognition as a financial asset together with any proceeds from disposing of the sold interest and any difference is recognized in profit or loss.

A **service concession arrangement** is an arrangement under which a public entity commissions the financing, design, development, construction or expansion as well as the operation and maintenance of public service infrastructure. HOCHTIEF is paid for its services as operator over the period of the arrangement. From HOCHTIEF's perspective, the consideration paid by the public entity for the services performed may constitute rights to a financial or to an intangible asset.

Deferred taxes arising from temporary differences in the carrying amounts of assets and liabilities between the IFRS financial statements and the tax base of individual Group companies or as a result of consolidation and the expected use of existing interest and loss carryforwards are recognized as deferred tax assets and liabilities. Exceptions include that no deferred tax liability is recognized on the initial recognition of goodwill or where it would be subject to the initial recognition exemption. Deferred tax assets from temporary differences or resulting from the anticipated use of existing interest and tax loss carryforwards in subsequent years are recognized only if it is sufficiently certain that they will be realized. Deferred tax assets and liabilities are offset within each company or tax group and type of tax provided that the criteria for offsetting are met. Deferred taxes are measured on the basis of tax rates applying or expected to apply in each country when they are realized. As before, these mostly range between 10% and 35%. For domestic operations, a tax rate of 30.0% (2024: 31.5%) is assumed, taking account of corporate income tax plus the German "solidarity surcharge" and the average rate of municipal trade tax faced by Group companies. Changes in deferred tax assets and liabilities are normally recognized in the Statement of Earnings. An exception to this comprises changes accounted for in other comprehensive income or directly in equity. For all other purposes, deferred taxes are measured on the basis of the tax regulations in force or enacted at the reporting date.

In Germany, the Federal Council (Bundesrat) approved a law for an immediate tax investment program to strengthen Germany as a business location in July 2025. The main elements of this law are the investment booster with accelerated depreciation (applicable to investments made between July 1, 2025 and December 31, 2027), the expansion of the research allowance and the gradual reduction of the corporate income tax rate from 15% to 10% in five steps of one percentage point each from the 2028 to 2032 assessment period. The tax rate changes had no significant effects on the 2025 financial year.

In July 2025, the One Big Beautiful Bill Act (OBBBA), a tax and expenditure bill, was passed in the United States. The bill focuses on extending permanent tax cuts from the Tax Cuts and Jobs Act of 2017 (TCJA), the adjustment of the Base Erosion Anti-Abuse Tax (BEAT), the Global Intangible Low Taxed Income Regime (GILTI), the use of Foreign Tax Credits (FTC) and Foreign Derived Intangible Income (FDII), as well as other tax provisions. The changes introduced by the OBBBA had no significant impact on the Consolidated Financial Statements 2025.

The Pillar 2 regulations, which came into force with effect from the 2024 financial year, provide for a global minimum tax of 15 percent, which applies to multinational corporations with worldwide sales of at least EUR 750 million.

ACS falls within the scope of Pillar 2 and builds the Ultimate Parent Entity of the minimum tax group. In 2025, HOCHTIEF Aktiengesellschaft will be considered a constituent entity of this minimum tax group in accordance with the Pillar 2 regulations. It is currently expected that HOCHTIEF Aktiengesellschaft and its domestic and foreign subsidiaries and affiliates will not incur any or any significant local top-up taxes. A complete determination of the Pillar 2 effects will be made at the ACS level.

Inventories are initially measured at cost of purchase or production. Production cost includes costs directly related to the units of production. Borrowing costs for inventories that are qualifying assets are capitalized as part of cost. Most materials and supplies are measured on a FIFO or moving-average basis.

Cash and cash equivalents consist of petty cash, cash balances at banks, and marketable securities with maturities of no more than three months at the time of acquisition that are subject to insignificant fluctuations in value only.

Non-current assets held for sale and associated liabilities are measured in accordance with IFRS 5 and presented separately in the current section of the Consolidated Balance Sheet. To be classed as assets held for sale, assets must be available for immediate sale and their sale must be highly probable. Assets held for sale can be individual non-current assets, groups of assets held for sale (disposal groups), or discontinued operations. A component of an entity is a discontinued operation if it represents a separate major line of business or geographical area of operations and is part of a single coordinated plan to dispose of a major line of business or geographical area of operations, or if it is a subsidiary acquired exclusively with a view to resale. Liabilities disposed of with assets in a single transaction are part of a disposal group or discontinued operation. Non-current assets held for sale cease to be depreciated or amortized, and are measured at their carrying amount or at fair value less costs to sell, whichever is lower. Gains or losses arising on the measurement of individual assets held for sale or of disposal groups are reported in the Statement of Earnings under profit or loss from continuing operations until their ultimate disposal. Conversely, gains or losses arising on the measurement of discontinued operations at fair value less costs to sell, profits or losses of discontinued operations, and gains or losses on their disposal are presented separately in the Statement of Earnings under profit or loss from discontinued operations.

Share-based payment transactions are measured in accordance with IFRS 2 and are reported under other provisions. The stock option plans at HOCHTIEF are accounted for Group-wide as cash-settled share-based payment transactions. Provisions for obligations under the Long-term Incentive Plans are recognized in the amount of the expected expense spread over the stipulated waiting period. The fair value of stock options is measured using generally accepted financial models, the plans being measured with the Black/Scholes option pricing model and using binomial tree methods. The computations are performed by an outside appraiser.

The parent company, ACS, also grants stock options to HOCHTIEF Group executives. ACS owes the share-based payment to the employees. As the recipient of the service rendered, HOCHTIEF accounts for this compensation as equity-settled share-based payment in accordance with IFRS 2. It is recognized as personnel expense in the statement of earnings with a counter-entry in equity.

Provisions for pensions and similar obligations are recognized for current and future benefit payments to active and former employees and their surviving dependents. The obligations primarily relate to pension benefits, partly for basic pensions and partly for optional supplementary pensions. Varying from one country to another, the individual benefit obligations are determined for the most part by length of service and pay scales. The Turner Group's obligations to meet healthcare costs for retired staff are likewise included in pension provisions due to their pension-like nature. Provisions for pensions and similar obligations are computed by the projected unit credit method. This determines the present value of future entitlements, taking into account current and future benefits already known at the reporting date plus anticipated future increases in salaries and pensions and, for the Turner Group, in healthcare costs. The computation is based on actuarial appraisals using biometric accounting principles. Plan assets as defined in IAS 19 are offset against pension obligations. Plan assets comprise assets transferred to pension funds to meet pension obligations, shares in investment funds purchased under deferred compensation arrangements, and qualifying insurance policies in the form of pension liability insurance. If the fair value of plan assets is greater than the present value of employee benefits, the difference is reported—subject to the limit in IAS 19—under other non-current assets.

Amounts resulting from the remeasurement of defined benefit plans are accounted for directly in equity in the period during which they arise and are recognized in other comprehensive income. The current service cost is reported under personnel costs. The net interest component, comprising the interest element of the increase in pension obligations less the anticipated returns on plan assets (each calculated using the discount factor for the pension obligations), is reported in net investment and interest income.

All remaining provisions account for all current obligations as of the reporting date that result from past events but are uncertain in their amount and/or settlement date. Provisions are recognized at the best estimate, i.e. after making allowance for price and cost increases, and are not offset against any rights to reimbursement. A provision can only be recognized on the basis of a legal or constructive obligation toward third parties. Where the effect of the time value of money is material, non-current provisions are stated at the present value of the estimated settlement amount as of the reporting date; non-current provisions are presented under non-current liabilities.

Current income tax liabilities comprise payment obligations arising from current income taxes. They are offset against tax refund entitlements if they relate to the same tax jurisdiction and are identical in nature and timing. Current tax expense is normally measured for the purposes of the annual financial statements in accordance with the interpretation of the law applied by the taxation authorities. Tax returns are prepared in accordance with applicable law, taking into account current case law and updated administrative instructions.

HOCHTIEF applies the recognition and measurement obligations arising from the application of IFRIC 23 in the Consolidated Financial Statements. IFRIC 23 clarifies how to apply the accounting and measurement requirements of IAS 12 where there is uncertainty about income tax treatments relating to current and deferred tax assets and liabilities. According to IFRIC 23, uncertain tax treatments may be accounted for separately or together with one or more other uncertain tax treatments. This is determined on the basis of which approach better predicts the resolution of the uncertainty. In making the assessment, it is to be assumed that a taxation authority will examine all amounts it has a right to examine and have full knowledge of all related information when making those examinations. If it is deemed improbable that the taxation authority will accept an uncertain tax treatment, the effect of the uncertainty is reflected for each uncertain tax treatment by using either the most likely amount or the expected value, depending on which method better predicts the resolution of the uncertainty.

The Group's companies are subject to income taxes in a large number of countries around the world. When assessing global income tax assets and liabilities, the interpretation of tax laws in particular may be subject to uncertainty. It cannot be ruled out that the various tax authorities will have a different point of view regarding the correct interpretation of tax laws. Changes in assumptions about the correct interpretation of tax laws arising, for example, from court rulings are reflected in the recognition of uncertain income tax assets and liabilities in the relevant reporting year.

Potential tax receivables as a result of recent legal developments are accounted for by reducing the tax liability or, in the case of a reimbursement claim, by recognizing an asset, if realization is probable. Reductions in tax liability mutually agreed with the tax authorities are accounted for by reducing the tax liability or by recognizing a receivable.

Contingent liabilities are possible or current obligations, based on past events, that are unlikely to lead to an outflow of resources or where a sufficiently reliable estimate of the amount of the obligation cannot be made. These are disclosed separately and not recognized on the balance sheet unless assumed in the course of a business combination. The amounts stated for contingent liabilities reflect the amount of the liability as of the reporting date.

Leases

IFRS 16 sets out the principles for the recognition, measurement, presentation, and disclosure of leases both for lessees and lessors.

The Group as a lessee

Lease recognition

The Group assesses whether a contract is or contains a lease, at inception of a contract. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. In such instances, the Group recognizes a right-of-use asset and a corresponding lease liability with respect to all lease agreements, except for short-term, cancelable leases and low-value leased assets. For these leases, the Group recognizes the lease payments as an operating expense on a straight-line basis over the term of the lease unless another systematic basis is more representative of the time pattern in which economic benefits from the leased assets are consumed.

The Group has a lease portfolio, comprising predominantly property, plant, operating equipment, and fleet vehicle rentals.

Measurement and presentation of right-of-use asset

The right-of-use assets recognized by the Group comprise the initial measurement of the related lease liability, any lease payments made at or before the commencement of the contract, less any lease incentives received and any direct costs. Costs incurred by the Group to dismantle the asset, restore the site or restore the asset are included at an estimated amount in the cost of the right-of-use asset.

It is subsequently measured under the cost model with any accumulated depreciation and impairment losses applied against the right-of-use asset. If the cost of the right-of-use asset reflects that the Group will exercise a purchase option, the right-of-use asset is depreciated from the commencement date to the end of the useful life of the underlying asset. Otherwise, the Group depreciates the asset over the shorter period of either the useful life of the asset or the lease term. The depreciation starts at the commencement date of the lease and the carrying value of the asset is adjusted to reflect the accumulated depreciation balance.

Any remeasurement of the lease liability is also applied against the right-of-use asset value.

The right-of-use assets are presented within property, plant and equipment in the balance sheet.

Measurement and presentation of lease liability

The lease liability is initially measured at the present value of the lease payments that are not paid at the commencement date, discounted by using the rate implicit in the lease. If this rate cannot be readily determined, the Group uses its incremental borrowing rate. HOCHTIEF presents the interest expense on the lease liability separately from the depreciation charge on the right-of-use asset.

The following items are also included in the measurement of the lease liability:

- Fixed lease payments offset by any lease incentives;
- Variable lease payments, for lease liabilities which are tied to a floating index;
- The amounts expected to be payable to the lessor under residual value guarantees;
- The exercise price of purchase options (if it is reasonably certain that the option will be exercised); and
- Payments of penalties for terminating leases, if the lease term reflects the lease terminating early.

The lease liability is separately disclosed in the balance sheet. The liabilities which will be repaid within 12 months are recognized as current and the liabilities which will be repaid in excess of 12 months are recognized as non-current.

The lease liability is subsequently measured by reducing the balance to reflect the principal lease repayments made and increasing the carrying amount by the interest on the lease liability.

The Group is required to remeasure the lease liability and make an adjustment to the right-of-use asset in the following instances:

- The term of the lease has been modified or there has been a change in the Group assessment of the purchase option being exercised, in which case the lease liability is remeasured by discounting the revised lease payments using a revised discount rate;
- A lease contract is modified and the lease modification is not accounted for as a separate lease, in which case the lease liability is remeasured by discounting the revised lease payments using a revised discount rate; and
- the lease payments are adjusted due to changes in the index or a change in expected payment under a guaranteed residual value, in which cases the lease liability is remeasured by discounting the revised lease payments using the initial discount rate. However, where the lease payments change is due to a change in a floating interest rate a revised discount rate is used.

The Group as lessor

The Group enters into lease agreements as a lessor with respect to some property subleases as well as renting equipment to its partners, suppliers, and contractors. Those leases are recognized as either finance or operating leases. If the terms of the lease transfer substantially all the risks and rewards of ownership to the lessee, the contract is classified as a finance lease. If this is not the case, then the lease is recognized as an operating lease. The income received from the operating leases is recognized on a straight-line basis over the lease term. Initial direct costs incurred in negotiating and arranging operating leases are included in the carrying amount of the leased asset. Amounts due from lessees under finance leases are recognized as receivables.

Financial instruments

The following section first outlines in brief the **classification, measurement, and derecognition rules** relevant to the HOCHTIEF Group with regard to financial assets and liabilities. Explanatory notes are then provided on the balance sheet items within the scope of IFRS 9, comprising other financial assets, long-term loans, receivables and other assets, marketable securities, liabilities, and derivative financial instruments. The cash and cash equivalents as explained above also fall within the scope of IFRS 9.

Financial assets and liabilities—except trade receivables—that are within the scope of IFRS 9 are initially recognized at fair value plus or minus transaction costs. Financial assets are measured subsequently at amortized cost or fair value on the basis of the entity's business model for managing the financial assets and the contractual cash flow characteristics of the financial assets. The following **classification** criteria are applied:

- Debt instruments that are held within a business model whose objective is to collect the contractual cash flows, and that have contractual cash flows that are solely payments of principal and interest on the principal amount outstanding, are measured subsequently at amortized cost (AC);
- Debt instruments that are held within a business model whose objective is both to collect the contractual cash flows and to sell the debt instruments, and that have contractual cash flows that are solely payments of principal and interest on the principal amount outstanding, are measured subsequently at fair value through other comprehensive income (FVOCI) after adjusting for deferred taxation. Unrealized gains or losses are reclassified to profit or loss on disposal;
- All other debt instruments and equity investments are normally subsequently measured at fair value through profit or loss (FVPL).

Notwithstanding the above, the HOCHTIEF Group may make the following irrevocable designation at initial recognition of a financial asset:

- The Group may irrevocably elect to present subsequent changes in fair value of an equity investment that is neither held for trading nor contingent consideration recognized by an acquirer in a business combination in other comprehensive income after adjusting for deferred taxation. Unrealized gains or losses are reclassified to retained earnings on disposal;
- The Group may irrevocably designate a debt instrument that meets the amortized cost or FVOCI criteria as measured at FVPL if doing so eliminates or significantly reduces an accounting mismatch.

With regard to **measurement**, expected credit losses are taken into account in the presentation of impairments of financial assets at amortized cost or FVOCI. Quantifying expected credit losses involves determining probability of default on initial recognition of an asset and subsequently whether there has been any significant increase in credit risk on an ongoing basis at each reporting period. In making this assessment, the HOCHTIEF Group considers both quantitative and qualitative information that is reasonable and supportable, including historical experience and forward-looking information that is available without undue cost or effort. Forward-looking information includes the future prospects of the industries in which the Group's debtors operate, obtained from economic expert reports, financial analysts, governmental bodies, relevant think-tanks, and other similar organizations, as well as consideration of various external sources of actual and forecast economic information that relate to the HOCHTIEF Group's core operations. In particular, as far as available, the following information is taken into account when assessing significant movements in credit risk:

- Actual or expected significant adverse changes in business, financial, or economic conditions that are expected to cause a significant change to the borrower's ability to meet its obligations.
- Actual or expected significant changes in the operating results of the borrower.
- Significant increases in credit risk on other financial instruments of the same borrower.
- External credit rating.
- Significant changes in the value of the collateral supporting the obligation or in the quality of third-party guarantees or credit enhancements.
- Significant changes in the expected performance and behavior of the borrower, including changes in the payment status of borrowers in the Group and changes in the operating results of the borrower.
- Macroeconomic information such as market interest rates and growth rates.

Financial assets are **derecognized** when the contractual rights to the cash flows from the financial asset expire or substantially all the risks and rewards of ownership are transferred to another entity. The HOCHTIEF Group also derecognizes financial assets if it no longer has control over an asset, although none of the substantial risks and rewards of ownership have been either transferred or retained. If the HOCHTIEF Group retains control, it continues to recognize the asset to the extent of its continuing involvement together with an associated liability for any obligations that have been retained.

The interests in non-consolidated subsidiaries and other participating interests accounted for under **other financial assets** fall under the FVPL or the FVOCI measurement category. In the case of publicly listed financial assets, fair value is determined as the market price. If there is no active market, fair value is normally calculated using the most recent market transactions or a valuation method such as the discounted cash flow method. Cost may be an appropriate estimate of fair value if only insufficient recent information is available to measure fair value or if there is a wide range of possible fair value measurements and cost represents the best estimate of fair value within that range. Initial measurement is performed as of the settlement date.

Long-term loans are stated at amortized cost. Loans bearing interest at normal market rates are reported at cost, and non-interest-bearing and low-interest-bearing loans are discounted to present value. Discounting is always done using a risk-adjusted discount rate.

Receivables and other assets are generally measured at amortized cost. Subsequent measurement is based on the effective interest rate method taking into account transaction costs, which are all costs that would not have been incurred had the transaction not been entered into. Receivables comprise financial receivables, trade receivables, and other receivables. Accounting provision is made for expected credit losses on receivables. For trade receivables, using the simplified approach, expected credit losses can be determined on the basis of loss rates calculated from historical and projected data taking into account the client and the regional economic environment. If there is objective material evidence that a financial asset may be impaired, the effective interest rate method is applied to the net carrying amount. Such objective evidence of impairment includes, for example, downgrading of a debtor's credit rating and related interruptions in payment or potential insolvency. For financial receivables and other receivables, expected credit losses are determined according to credit risk on the basis of the losses expected either in the next twelve months or over the remaining term. The effective interest rate is applied in such cases to the gross carrying amount. Significant changes in credit risk are taken into account on an ongoing basis. Receivables in connection with factoring are recognized in some cases at fair value in the FVPL measurement category and derecognized if substantially all risks and rewards of ownership are transferred.

The **marketable securities** are classified in the AC, FVPL, or FVOCI measurement category, depending on business model and contractual cash flows. These mainly comprise securities held in special-purpose funds and investment funds, as well as interest-bearing securities with a residual term of more than three months at the time of acquisition and where there is no intention to hold the securities to maturity. Initial measurement at fair value is performed as of the settlement date and includes any transaction costs directly attributable to the acquisition of the securities. Unrealized gains or losses on debt instruments measured at fair value through other comprehensive income are reported in other comprehensive income and are reversed to income or expense on disposal. Accounting provision is made for expected credit losses on securities in the AC and FVOCI measurement categories. Expected credit losses are calculated according to credit risk on the basis of the losses expected either in the next twelve months or over the remaining term. Significant changes in credit risk are taken into account. If there is no objective evidence of impairment, the effective interest rate is applied to the gross carrying amount. If, however, there is objective evidence that a financial asset may be impaired, the effective interest rate is applied to the net carrying amount.

Liabilities are recognized at amortized cost and subsequently measured using the effective interest rate method. Supply chain finance arrangements with banks match usual payment terms and do not modify the original liability toward the supplier, hence the amounts are presented under trade payables or other liabilities.

Derivative financial instruments are measured at fair value regardless of purpose and reported under other receivables and other assets or other liabilities. Initial measurement is as of the trade date. All derivative financial instruments are measured on the basis of current market rates as of the balance sheet date. The recognition of changes in fair value depends on the purpose for which a derivative is held. Derivatives are only ever used in the HOCHTIEF Group for hedging purposes. Hedges are structured for maximum effectiveness in accordance with the HOCHTIEF Group's risk management strategy and economic risk control. A cash flow hedge is a hedge of the exposure to variability in cash flows from a hedged item, as with the hedging of variable rate loans to counter variations in payment amounts due to interest rate changes. Unrealized gains and losses are generally initially recognized in the cash flow hedge reserve, taking account of deferred taxes. The portion of the changes in value initially recognized in the cash flow hedge reserve is reclassified to income or expense as soon as the hedged item is recognized in income or expense. If a hedged planned transaction subsequently results in recognition of a financial asset or a financial liability, gains or losses recognized in the cash flow hedge reserve in the meantime are reclassified to income or expense in the period when the financial asset or financial liability affects income. If a hedged planned transaction subsequently results in recognition of a non-financial asset or liability, gains or losses recognized in equity in the meantime are taken out of the cash flow hedge reserve and subtracted from or added to the initial cost of the asset or liability. In the cases described, only the portion of changes in value that are determined to be effective for hedging purposes are recognized in the cash flow hedge reserve. The ineffective portion is recognized directly as income or expense. In the HOCHTIEF Group, only cash flow hedges are entered into.

Judgements made by management in applying the accounting policies primarily relate to the following matters:

- Determination of whether an arrangement constitutes a lease.
- Financial assets may be measured, irrespective of the business model and the presence of standard cash flow conditions, at fair value if the requirements for the fair value option are met.
- Presentation of the risk management strategy in the case of hedges by the use of hedge accounting.
- Assets earmarked for sale must be assessed to confirm that they are available for immediate sale and their sale is highly probable. If the result of this assessment is positive, those assets and any liabilities to be disposed of in the same transaction must be reported and accounted for as assets held for sale and liabilities associated with assets held for sale. In this connection, it must be assessed whether an asset is a non-current asset, a disposal group, or a discontinued operation.
- Determination of control or joint control:
  The Group continually reassesses matters and circumstances based on currently available information to consider, under IFRS, if changes are required to previous conclusions regarding control or joint control determinations.

  UGL Transport – Timing of loss of control
  On December 1, 2025, CIMIC entered into an arrangement with Sojitz regarding the acquisition by Sojitz of a 50% equity interest in UGL Transport and the formation of a joint venture with Sojitz over UGL Transport.

  At December 31, 2025 Foreign Investment Review Board approval was the last outstanding condition precedent of the binding Share Sale Agreement, with all other conditions precedent for the transaction met prior to December 31, 2025. This approval was deemed highly probable and procedural at December 31, 2025 based on draft regulatory approval received prior to December 31, 2025 and legal advice obtained. It was formally received on January 13, 2026 and the transaction legally completed on January 19, 2026. Judgement was therefore required in determining whether control was lost by December 31, 2025 and the transaction should be accounted for as a sale under IFRS in the financial year ending December 31, 2025.

The transaction documents contained provisions for the conduct of business in the period before completion, including the requirement for cooperation from Sojitz in decisions on material key relevant activities between December 31, 2025 and legal completion. These contractual arrangements resulted in CIMIC losing the unilateral ability to control the decisions over the relevant activities of UGL Transport by December 31, 2025. The Shareholders Deed governing decisions on key relevant activities was formally signed on January 19, 2026 as part of the legal close process.

Accordingly, the loss of control over UGL transport was recognized on December 31, 2025.

UGL Transport – Classification of joint ventures
As part of the disposal of UGL Transport to the joint venture between CIMIC and Sojitz ("UGL Transport JV") on December 31, 2025, CIMIC removed its nominee directors from the various boards of the at equity accounted investments of UGL Transport for which change of control consents were in progress and waived certain of its material rights, in respect of nominating directors; and voting on the election, re-election, appointment or removal of directors until such time as the interests are legally divested on either UGL Transport JV or the other joint venture participants. Further, CIMIC has agreed to abstain from voting its shares on certain resolutions put to a meeting of respective joint ventures partners, retaining only protective rights in respect of its ownership interests such as the right to vote on matters relating to share rights, ownership and resolutions which may adversely affect the economic value of CIMIC's interest in the joint ventures.

In accordance with the Group's accounting policy, CIMIC assessed it no longer has joint control or significant influence over the joint ventures, which were reclassified from at equity accounted investments to financial investments measured at fair value through profit or loss in accordance with IFRS 9.

Thiess – Accounting for acquisition in stages: Acquisition of additional 10%
On April 23, 2024, CIMIC acquired an additional 10% of Thiess comprising a portion of the ordinary shares, Class A preference shares and Class C preference shares held by Elliott. The acquisition, for a cash purchase price of EUR 194 million, increases CIMIC's ownership of Thiess to 60%.

CIMIC and Elliott continue to have equal Thiess board representation while revisions to the shareholders agreement mean that CIMIC strengthens its governance over the day-to-day operations of the company. Consequently, CIMIC has the ability to direct Thiess' relevant activities and results in Thiess becoming a controlled entity of CIMIC under IFRS, with Elliott's retained minority interest recognized within "non-controlling interest" in the consolidated balance sheet.

The decision made by the HOCHTIEF Group for general application in each instance is set out under Accounting Policies in these Notes.

Preparation of the IFRS Consolidated Financial Statements requires **Group management to make estimates and assumptions** that affect the reported amount of assets, liabilities, income and expenses, and disclosures of contingencies, commitments, and other obligations. The main estimates and assumptions relate to the following:

- Contract manufacturing and sales (Notes 1 and 2):
  – Determination of stage of completion
  – Estimation of total contract costs
  – Estimation of total contract revenue, including recognizing revenue on contract variations and claims only to the extent it is highly probable that a significant reversal in the amount recognized will not occur in the future
  – Estimation of a customer's preparedness to accept contract variations and claims
  – Estimation of project completion date
  – Estimation of project execution productivity
  – Assessing projects on a percentage of completion basis, in particular with regard to accounting for contract modifications, the timing of profit recognition, and the amount of profit recognized.
- Estimating the economic life of intangible assets, property, plant and equipment, and of investment properties (Notes 1, 12, 13, 14, and 15)
- The measurement of expected credit losses (Notes 1 and 34)
- Accounting for provisions (Notes 1, 27, and 28)
- Impairment testing of equity-method investments (Notes 1 and 16)
- Impairment testing of goodwill on the basis of the three-year plan (Notes 1 and 12)
- Measurement of the fair value of assets and liabilities from business combinations (Notes 1 and 34)
- The assessment of the recognition of deferred taxes considering the expected future performance of the business in line with Group strategy and the identification of uncertain income tax treatments (Notes 1, 10, and 21).

All estimates and assumptions are based on current circumstances and appraisals. Forward-looking estimates and assumptions made as of the balance sheet date with a view to future business performance take account of circumstances prevailing on preparation of the Consolidated Financial Statements and future trends considered realistic for the global and industry environment. Actual amounts can vary from the estimated amounts due to changes in the operating environment that are at variance with the assumptions and lie beyond management control. If such changes occur, the assumptions and, if necessary, the carrying amounts of affected assets and liabilities are revised accordingly.

HOCHTIEF integrates environmental, social, and governance (ESG) factors, and in particular the risks and opportunities associated with climate change, into its business activities. ESG issues are incorporated into Group management, strategy, risk management, and the definition and measurement of key performance indicators and targets. In accordance with the requirements of ESRS E1 Climate Change, climate-related risks and opportunities that can be expected to have a short-, medium-, or long-term impact on cash flows, access to finance, or capital costs are disclosed in the Sustainability Statement as part of the 2025 integrated financial and sustainability report.

HOCHTIEF closely monitors global economic and geopolitical developments in the regions and markets that are important to the Group, focusing on markets in North America, Australia, Southeast Asia and Europe. HOCHTIEF continues to see good opportunities for expanding its market positions and core business in a targeted manner. Changes in the geopolitical situation could have a negative long-term impact on the global economy and also cause a reduction in public investment. This could reduce long-term growth prospects in the markets that are significant for HOCHTIEF and/or adversely affect future business development. However, a number of government investment programmes in individual countries also present excellent opportunities for the Group. With its global presence, focus on developed markets and renowned local companies, HOCHTIEF is well positioned to counteract potential regional fluctuations and respond flexibly to such risks. Overall, geopolitical developments are not currently expected to have any significant negative impact on the consolidated financial statements.

New Accounting Pronouncements

Financial reporting standards applied for the first time in 2025

Adoption by the International Accounting Standards Board (IASB) of revised or new IFRS pronouncements has resulted in changes to accounting policies in those instances where the pronouncements have been endorsed by the EU and their application is mandatory, or early application is permitted, for the reporting period January 1 to December 31, 2025.

The new pronouncements relate to the amendment to the following standard: The resulting disclosure requirements had no material impact on the HOCHTIEF Consolidated Financial Statements, but have been complied with at the appropriate places in the financial statements and notes.

Amendments to IAS 21 The Effects of Changes in Foreign Exchange Rates: Lack of Exchangeability

Accounting standards to be applied after the 2025 reporting year

The International Accounting Standards Board (IASB) has issued a new accounting pronouncement in the form of IFRS 18, which is relevant to the HOCHTIEF Consolidated Financial Statements. This standard was adopted by the EU on February 13, 2026, but is not yet applicable in the 2025 financial year:

IFRS 18 Presentation and Disclosure in Financial Statements

Published by the IASB in April 2024, the new standard IFRS 18 will supersede the current IAS 1 Presentation of Financial Statements. It carries forward many of the requirements from IAS 1 while replacing others with new requirements. There are also amendments to IFRS 7, IAS 33, IAS 8, and IAS 7. HOCHTIEF is required to apply IFRS 18 and related amendments to the other standards for the fiscal year beginning on January 1, 2027, with retrospective application to the comparative period.

The Group is currently analysing all impacts the IFRS 18 will have on the Consolidated Financial Statement. The initial expected significant changes on HOCHTIEF's primary financial statements and notes to the Consolidated Financial Statement are, as follows:

- Presentation of specified categories and defined subtotals and totals in the Consolidated Statement of Earnings. All income and expenses are to be classified into one of the five categories: operating, investing, financing, income expenses and discontinued operation. New mandatory subtotals and totals will be "operating profit or loss", "profit or loss before financing and income taxes", and "profit or loss for the year".

- Rental income from investment properties and share of profit or loss of equity-method associates and joint ventures will be classified in the investing category within the Consolidated Statement of Earnings.

- Foreign exchange differences will be classified in the category where the related income or expense from the item giving rising to the foreign exchange difference.

- On the Consolidated Statement of Cash Flows, interest and dividends received will be classified in the investing activities, whereby interest and dividends paid will be classified in the financing activities.

- The starting point for determining cash flows from operating activities under the indirect method in the Consolidated Statement of Cash Flows will change from "profit or loss before tax" to "operating profit or loss"

- New and detailed disclosures will be provided on management-defined performance measures in the notes.

- Aggregation and disaggregation of information in the primary financial statements and notes will be changed.

From today's perspective, the remaining IFRS pronouncements adopted by the IASB, some of which are not yet endorsed by the EU, have no major relevance for the HOCHTIEF Group. Potential implications for the Consolidated Financial Statements are currently still being assessed:

IFRS 19 Subsidiaries without Public Accountability: Disclosures

Amendments to IFRS 9 Financial Instruments and IFRS 7 Financial Instruments: Disclosures: Contracts Referencing Nature-dependent Electricity

Amendments to IFRS 9 Financial Instruments and IFRS 7 Financial Instruments: Disclosures: Amendments to the Classification and Measurement of Financial Instruments

Amendments to IAS 21 The Effects of Changes in Foreign Exchange Rates: Translation to a Hyperinflationary Presentation Currency

As part of its annual improvements process, the IASB published an omnibus standard, Annual Improvements Volume 11, in July 2024. This made amendments to IFRS 10, IFRS 9, IFRS 7, IFRS 1, and IAS 7 relating to clarifications, simplifications, corrections, or improvements to the consistency of individual standards.

Explanatory Notes to the Consolidated Statement of Earnings

2. Sales

The EUR 38,236,464 thousand (2024: EUR 33,301,270 thousand) sales figure comprises performance obligations recognized under the percentage of completion method in the construction and PPP business, plus products and services provided to construction joint ventures, and other related services. Secondly, the sales figure includes revenues from services such as construction planning, project development, logistics, asset management, and insurance business.

Sales generated externally are allocated in the financial year/prior year based on the location of the subgroups and are broken down by segment and geographical region in the reporting period as follows (in EUR thousand):

2025

Geographical region	**North America**		**Asia Pacific**		**Europe**		**Total sales**	
Segments								
Turner	25,786,383	67.4%	–	–	–	–	25,786,383	67.4%
CIMIC	–	–	10,637,374	27.8%	–	–	10,637,374	27.8%
Engineering and Construction	–	–	–	–	1,674,146	4.4%	1,674,146	4.4%
Corporate	–	–	–	–	138,561	0.4%	138,561	0.4%
HOCHTIEF Group	**25,786,383**	**67.4%**	**10,637,374**	**27.8%**	**1,812,707**	**4.8%**	**38,236,464**	**100.0%**

Included in sales is a EUR 177.1 million reversal of previously recognized sales mainly relating to CIMIC.

The composition of sales in the prior-year period is as follows (EUR thousand):

2024

Geographical region	**North America**		**Asia Pacific**		**Europe**		**Total sales**	
Segments								
Turner	19,261,763	57.8%	–	–	–	–	19,261,763	57.8%
CIMIC	–	–	10,212,548	30.7%	–	–	10,212,548	30.7%
Engineering and Construction	2,097,783	6.3%	–	–	1,529,061	4.6%	3,626,844	10.9%
Corporate	–	–	–	–	200,115	0.6%	200,115	0.6%
HOCHTIEF Group	**21,359,546**	**64.1%**	**10,212,548**	**30.7%**	**1,729,176**	**5.2%**	**33,301,270**	**100.0%**

Included in sales of previous period are EUR 506.5 million of sales adjustments. The amount of EUR 487.5 million relates to CIMIC, of which EUR 81.0 million is a sales constraint applied to variable consideration and EUR 406.5 million is a reversal of previously recognized sales.

Revenues not related to contracts with clients, mainly relating to “Other” activities in Corporate, amount to EUR 237,058 thousand (2024: EUR 237,155 thousand).

Almost all sales are recognized over time.

Revenues recognized in the reporting period that were included in contract liabilities at the beginning of the reporting period came to EUR 654 million (2024: EUR 1,133 million). An amount of EUR 6 million (2024: EUR 25 million) in revenues was recognized in the reporting period in relation to performance obligations satisfied (or partially satisfied) in prior periods.

The Group's order backlog (remaining performance obligations) by segment and geographical region for the reporting period and the prior-year period is based on the domicile of the subgroups and is as follows (EUR thousand):

2025

Geographical region	**North America**		**Asia Pacific**		**Europe**		**Total sales**	
Segments								
Turner	37,698,974	52.0%	–	–	–	–	37,698,974	52.0%
CIMIC	–	–	21,809,267	30.1%	–	–	21,809,267	30.1%
Engineering and Construction	5,796,896	8.0%	–	–	7,160,029	9.9%	12,956,925	17.9%
Corporate	–	–	–	–	–	–	–	–
HOCHTIEF Group	**43,495,870**	**60.0%**	**21,809,267**	**30.1%**	**7,160,029**	**9.9%**	**72,465,166**[1]	**100.0%**

[1] Includes EUR 8,743,724 thousand of HOCHTIEF's share from equity-accounted joint ventures and associates

2024

Geographical region	**North America**		**Asia Pacific**		**Europe**		**Total sales**	
Segments								
Turner	31,930,035	47.3%	–	–	–	–	31,930,035	47.3%
CIMIC	–	–	24,008,770	35.5%	–	–	24,008,770	35.5%
Engineering and Construction	5,339,651	7.9%	–	–	6,305,726	9.3%	11,645,377	17.2%
Corporate	–	–	–	–	–	–	–	–
HOCHTIEF Group	**37,269,686**	**55.2%**	**24,008,770**	**35.5%**	**6,305,726**	**9.3%**	**67,584,182**[2]	**100.0%**

[2] includes EUR 2,386,659 thousand of HOCHTIEF's share from equity-accounted joint ventures and associates

Contract durations vary between business activities. While revenue is earned over varying contract durations, a larger proportion of the revenue shown above is expected to be earned in the short term.

The forward order book in relation to work done is equivalent to 21 months of work.

3. Other operating income

(EUR thousand)	**2025**	2024
Deconsolidation gains and gains from change in the method of consolidation	501,090	593,502
Foreign exchange gains	30,554	12,566
Income from reversal of provisions	30,018	27,285
Income from disposal of intangible assets, property, plant and equipment, and investment properties	16,384	13,559
Income from write-ups to non-current assets (excluding financial assets)	673	95
Income from derecognition of/reversals of impairments on receivables	302	3,802
Sundry other operating income	90,177	67,797
	669,198	**718,606**

In 2025, the income from deconsolidation gains and gains from change in the method of consolidation are mainly attributable to UGL Transport at EUR 164,973 thousand, Leakes Road at EUR 146,406 thousand and Flatiron at EUR 145,914 thousand. The previous year includes a gain of EUR 592,512 thousand resulting from the remeasurement of the 50% stake in Thiess, which was previously accounted for using the equity method, as part of a step acquisition.

Sundry other operating income includes income from insurance claims and other income not accounted for elsewhere.

4. Materials

(EUR thousand)	**2025**	2024
Raw materials and supplies	2,215,494	2,428,175
Purchased services	26,548,399	22,112,768
	28,763,893	**24,540,943**

5. Personnel costs

(EUR thousand)	**2025**	2024
Wages and salaries	5,238,990	5,288,714
Social insurance, pensions, and support	771,522	792,329
	6,010,512	**6,081,043**

Expenditure on pensions totaled EUR 294.548 thousand (2024: EUR 299,422 thousand). This mostly comprises new entitlements accrued during the year under defined benefit pension plans and payments into defined contribution pension schemes. Payments to state pension insurance funds are included in social insurance.

Employees (average for the year excluding employees in occupational training)

	2025	2024
Germany	3,305	3,073
International	56,712	49,833
	60,017	**52,906**

6. Depreciation and amortization

(EUR thousand)	**2025**	2024
Intangible assets	61,060	24,616
Property, plant and equipment	608,321	568,767
Of which: Right-of-use assets for leases	226,135	204,956
Investment properties	1,046	1,032
	670,427	**594,415**

As in the prior year, depreciation and amortization does not include any impairment losses.

7. Other operating expenses

(EUR thousand)	2025	2024
Insurance expenses	780,542	585,650
Rentals and lease rentals	389,927	387,690
Organization and programming	133,182	135,940
Travel expenses	131,926	126,015
Technical and business consulting	110,473	111,059
Legal expenses	60,418	60,645
Structural and adaptation measures	27,065	33,349
Currency losses	25,214	38,791
Other taxes	17,306	13,713
Sundry other operating expenses	298,913	171,937
	1,974,966	**1,664,789**

The insurance expenses mainly relate to project risk management in the Turner Group. Insurance cover from Turner and from other project stakeholders such as suppliers and clients is combined to minimize project execution risks to Turner and its clients. The insurance expenses are counterbalanced by insurance revenue reported in sales.

Sundry other operating expenses in the reporting year mostly comprise order processing, costs of materials for administrative purposes, costs of preparing the annual financial statements, and other expenses not reported elsewhere.

8. Net income from participating interests

Net income from participating interests includes all income and expenses relating to equity-method investments and participating interests.

Net income from participating interests is made up as follows:

(EUR thousand)	2025	2024
Share of profits and losses of equity-method associates and joint ventures	**94,806**	**30,148**
Of which: Reversal of impairments	6,155	–
Of which: Impairments	(4,581)	(8,991)
Result from non-consolidated subsidiaries	(27)	2,076
Of which: Reversal of impairments	–	–
Of which: Impairments	(94)	(12)
Result from other participating interests	(1,202)	(571)
Of which: Reversal of impairments	365	1,488
Of which: Impairments	(3,647)	(18,079)
Income from the disposal of participating interests	2,396	73,899
Expenses on disposal of participating interests	–	(5)
Income from long-term loans to participating interests	4,305	8,430
Net income from other participating interests	**5,472**	**83,829**
	100,278	**113,977**

The share of profits and losses of equity-method associates and joint ventures was EUR 75,022 thousand (2024: EUR 472 thousand) relating to associates and EUR 19,784 thousand (2024: EUR 29,676 thousand) relating to joint ventures.

Net income from other participating interests in the reporting year includes impairments on investments in the CIMIC segment in the amount of EUR 3,461 thousand (2024: EUR 17,572 thousand).

Income from the disposal of participating interests relates to the Engineering and Construction segment.

9. Net investment and interest income

(EUR thousand)	**2025**	2024
Interest and similar income	181,213	174,520
Other investment income	29,951	32,297
Investment and interest income	**211,164**	**206,817**
Interest and similar expenses	(465,835)	(422,220)
Interest component of increase in non-current provisions	(10,383)	(10,603)
Of which: Net interest expense on pension obligations	(10,373)	(10,555)
Other investment expenses	(31,921)	(38,728)
Investment and interest expenses	**(508,139)**	**(471,551)**
	(296,975)	**(264,734)**

Interest and similar income consists of interest on cash investments, interest-bearing securities, and other long-term loans, plus profit shares and dividends from securities. Interest and similar expenses represent all interest incurred. Net interest income—the balance of interest and similar income and expenses—is at a negative EUR 284,622 thousand (2024: negative EUR 247,700 thousand).

Interest income of EUR 181,213 thousand was recorded in 2025 (2024: EUR 174,520 thousand) including financial instruments measured at fair value. Interest expenses of EUR 429,261 thousand were recorded for financial instruments not carried at fair value through profit or loss (2024: EUR 385,305 thousand).

Net interest expense on pension obligations—an amount of EUR 10,373 thousand (2024: EUR 10,555 thousand)—consists of EUR 24,422 thousand (2024: EUR 24,665 thousand) in annual interest on the net present value of long-term pension obligations rolled over into the new year, offset against EUR 14,049 thousand (2024: EUR 14,110 thousand) in interest income on plan assets.

That portion of investment and interest income/expenses which is not included in interest and similar income/expenses or in the interest component of increases in non-current provisions is reported in other investment income and other investment expenses. This category mostly comprises income and expenses relating to sales of securities and to derivatives as well as expenses relating to impairment losses on securities and on other long-term loans.

10. Income taxes

The HOCHTIEF Group's income taxes include income taxes paid or owed in the various countries together with deferred taxes. They break down by origin as follows:

(EUR thousand)	**2025**	2024
Current income taxes	415,709	179,307
Of which: Current taxes of prior periods	(9,121)	(14,423)
Deferred taxes	(25,373)	(42,703)
Of which: Relating to temporary differences	(11,886)	44,137
Of which: Arising from tax loss carryforwards/tax credits	(13,487)	(86,840)
	390,336	**136,604**

The amount by which tax expense is reduced by the utilization of tax loss carryforwards and interest carryforwards for which no deferred tax assets have been recognized as well as by unrecognized temporary differences and tax credits is EUR 13,506 thousand (2024: EUR 26,271 thousand).

Deferred and current taxes are measured on the basis of tax rates enacted or substantively enacted in each country as of the reporting date. Considering the legally adopted gradual reduction of the corporate tax rate and an average multiplier for German municipal trade tax, the Group tax rate for deferred tax of 30.0 % is derived as follows:

(Percent)	**2025**	2024
Corporate income tax rate	13.578	15.000
Solidarity surcharge	5.500	5.500
Corporate income tax rate including solidarity surcharge	**14.325**	**15.825**
Average municipal trade tax rate	15.675	15.675
Group tax rate	**30.000**	**31.500**

The effective tax expense of EUR 390,336 thousand (2024: EUR 136,604 thousand) differs by EUR 53,739 thousand (2024: EUR 179,608 thousand) from the expected tax expense of EUR 444,075 thousand (2024: EUR 316,212 thousand). The expected tax expense is determined by applying the Group tax rate for current tax to profit before tax.

The following table shows the reconciliation of the expected tax expense to the effective tax expense:

(EUR thousand)	**2025**	2024
Profit before tax	1,409,763	1,003,848
Theoretical tax expense, at 31.5%	444,075	316,212
Difference between the above and foreign tax rates	(63,093)	(26,195)
Differences from tax base for German municipal trade tax	(1,333)	3,945
Changes in valuation allowances on deferred tax assets without recognition of deferred taxes/utilization of interest carryforwards/tax credits	4,115	18,922
Tax effects on:		
Tax-exempt income	(56,992)	(70,814)
Non-tax-allowable expenditure	43,740	76,287
Equity accounting of associates and joint ventures, including impairment of associates and joint ventures	14,413	35,627
Other	5,411	(217,380)
Effective tax charges	**390,336**	**136,604**
Effective rate of tax (percent)	27.7	13.6

As in the prior year, the tax-exempt income mostly relates to income from participating interests.

The item “Other” includes tax income of EUR 9,121 thousand from prior-period transactions and EUR 1,650 thousand deferred tax income from prior-period transactions and other miscellaneous items.
In previous year, the item “Other” includes the tax-free revaluation gain following the acquisition of further shares in Thiess Group Holdings Pty by CIMIC which led to a tax effect of EUR 177.7 million. Furthermore in previous year the “Other” item includes tax expenses in the amount of EUR 14,423 thousand and deferred tax expenses income of EUR 7,932 thousand from prior-period transactions and other miscellaneous items.

11. Non-controlling interests

The EUR 117,094 thousand (2024: EUR 91,619 thousand) non-controlling interests in consolidated net profit relate exclusively to profit shares. EUR 95,458 thousand (2024: EUR 69,212 thousand) of this amount is attributable to the CIMIC segment.

Explanatory notes to the Consolidated Balance Sheet

12. Goodwill

The table below shows the changes in Goodwill on the Consolidated Balance Sheet for 2025 and 2024:

(EUR thousand)	Goodwill arising on consolidation
Cost of acquisition or production	
Jan. 1, 2025	2,851,197
Additions or disposals due to changes in the scope of consolidation	297,871
Reclassifications	–
Currency adjustments	(155,603)
Dec. 31, 2025	2,993,465
Cumulative depreciation 2025	–
Carrying amounts as of Dec. 31, 2025	**2,993,465**
Cost of acquisition or production	
Jan. 1, 2024	976,085
Additions or disposals due to changes in the scope of consolidation	1,963,176
Reclassifications	(52,606)
Currency adjustments	(35,458)
Dec. 31, 2024	2,851,197
Cumulative depreciation 2024	–
Carrying amounts as of Dec. 31, 2024	**2,851,197**

Goodwill recognized on initial consolidation for consolidated companies in continuing operations is allocated to cash-generating units at a level no higher than the segment for the purposes of impairment testing as described in the following.

Annual impairment testing of goodwill at cash-generating unit level, at which goodwill is monitored for internal management purposes, is performed at HOCHTIEF as of March 31 in each reporting year. It is ensured as of the balance sheet date December 31 that there are no material changes in the parameters for impairment testing that would result in an impairment. Specifically, interest rate changes and their impact on cost of capital are analysed alongside the business performance of each cash-generating unit in the reporting year. For the purpose of impairment testing, the recoverable amount of a cash-generating unit is compared with its carrying amount.

The recoverable amount for the Turner, CIMIC, and HOCHTIEF Europe cash-generating units is measured separately for each unit as value in use. This is the present value of the expected future free cash flow from each cash-generating unit. Value in use is determined from an internal Group perspective using the discounted cash flow method. This is applied on the basis of cash flow budgets derived as a rule from the three-year budget for the detailed planning horizon as approved by the Executive Board and current at the time of impairment testing. Budgeting within the detailed planning horizon was based on rising sales and rising EBIT margins for the three cash-generating units Turner, CIMIC and HOCHTIEF Europe. The forecasts incorporate past experience and expected future market developments. Cash flows are assumed to remain constant in subsequent years. A sustained cash flow is determined on the basis of free cash flow in the last budget year. Budgeting premises are adjusted in line with current knowledge. Weighted average cost of capital (WACC) is used for cost of capital figures. Value in use is first measured on an after-tax basis by discounting the cash flows with an after-tax WACC determined separately for each cash-generating unit. The pretax discount rate is then found by iteration for the purposes of the Notes disclosures.

The discount rates used in impairment testing for the Turner, CIMIC, and HOCHTIEF Europe cash-generating units are between 12.28% and 15.01% before tax (2024: between 11.67% and 12.16%).

In the 2024 financial year, due to the change in segment structure, goodwill was partially reallocated in accordance with the requirements of IAS 36 using the relative value approach.

Due to high valuation reserves —as in the prior year—, comparison of the cash-generating units' recoverable amounts with their carrying amounts did not reveal any impairment of goodwill.

Changes in goodwill by cash-generating units in 2025 were as follows:

(EUR thousand)	Jan. 1, 2025	Currency adjustments	Consolidation changes	**Dec. 31, 2025**
Turner	283,380	(11,838)	287,998	559,540
CIMIC	2,536,685	(143,765)	(34,676)	2,358,244
HOCHTIEF Europe	31,132	–	44,549	75,681
HOCHTIEF Group	**2,851,197**	**(155,603)**	**297,871**	**2,993,465**
HOCHTIEF Group—recognized within assets held for sale	52,606	–	(52,606)	–
HOCHTIEF Group total	2,903,803	(155,603)	245,265	2,993,465

13. Other intangible assets

The table below shows the changes in Other intangible assets on the Consolidated Balance Sheet for 2025 and 2024:

(EUR thousand)	Concessions, industrial property and similar rights and assets, and licenses in such rights and assets
Cost of acquisition or production	
Jan. 1, 2025	660,314
Additions or disposals due to changes in the scope of consolidation	71,017
Additions	31,938
Disposals	(8,554)
Reclassifications	212
Currency adjustments	(36,563)
Dec. 31, 2025	718,364
Cumulative depreciation	
Jan. 1, 2025	189,730
Additions or disposals due to changes in the scope of consolidation	(20,610)
Additions	61,060
Disposals	(8,298)
Reclassifications	10
Currency adjustments	(9,789)
Impairment reversals	–
Dec. 31, 2025	212,103
Carrying amounts as of Dec. 31, 2025	**506,261**
Cost of acquisition or production	
Jan. 1, 2024	341,657
Additions or disposals due to changes in the scope of consolidation	369,083
Additions	17,093
Disposals	(19,798)
Reclassifications	(45,239)
Currency adjustments	(2,482)
Dec. 31, 2024	660,314
Cumulative depreciation	
Jan. 1, 2024	215,714
Additions or disposals due to changes in the scope of consolidation	156
Additions	24,616
Disposals	(14,989)
Reclassifications	(37,376)
Currency adjustments	1,609
Impairment reversals	–
Dec. 31, 2024	189,730
Carrying amounts as of Dec. 31, 2024	**470,584**

As in the prior year, other intangible assets are not subject to any restrictions and no impairment losses were recorded. A total of EUR 2,657 thousand (2024: EUR 8,171 thousand) was expensed for Group-wide research and development projects by the central innovation management function.

Other Intangible assets include company names recognized on initial consolidation. Change in company names by segments in 2025 were as follows:

(EUR thousand)	Jan. 1, 2025	Currency adjustments	Consolidation changes	Depreciation	**Dec. 31, 2025**
Turner	39,300	(5,983)	27,498	–	60,815
CIMIC	164,231	(8,174)	–	(121)	155,936
HOCHTIEF Group	**203,531**	**(14,157)**	**27,498**	**(121)**	**216,751**
HOCHTIEF Group—recognized within assets held for sale	5,795	–	(5,795)	–	–
HOCHTIEF Group total	209,326	(14,157)	21,703	(121)	216,751

The company names are tested for impairment annually and if there is any indication of impairment. Impairment testing is performed in accordance with IAS 36 as described for goodwill.

14. Property, plant and equipment

(EUR thousand)	Land, similar rights and buildings, including buildings on land owned by third parties	Technical equipment and machinery, transportation equipment	Other equipment and office equipment	Prepayments and assets under construction	Right-of-use assets: Land and buildings	Right-of-use assets: Technical equipment and machinery; other equipment and office equipment	Total

Carrying amounts as of Dec. 31, 2024	**30,185**

On January 1, 2025 the Group made a change in the presentation of its non-current land asset at Leakes Road from property, plant and equipment to investment properties. The reclassification of the land asset is in accordance with Group's accounting policy and the intended use determined on acquisition in October 2024. The additions or disposals due to changes in the scope of consolidation include an amount of EUR 112,081 thousand relating to the sale of Leakes Road end of 2025.

As in the prior year, no impairment losses were recorded on investment properties in the reporting year.

The fair values of investment properties was EUR 23,670 thousand as of December 31, 2025 (2024: EUR 37,312 thousand). This is measured as in the past using internationally accepted valuation techniques, such as taking comparable properties as a guide to current market prices or by applying the discounted cash flow method.

Rental income from investment properties in the reporting year totaled EUR 4,385 thousand (2024: EUR 4,709 thousand). The direct operating expenses totaling EUR 140 thousand (2024: EUR 110 thousand) were entirely attributable to rented investment properties.

As in the prior year, investment properties are not subject to any restrictions.

16. Equity-method investments

(EUR thousand)	Dec. 31, 2025	Dec. 31, 2024
Equity-method associates	1,245,914	1,383,628
Equity-method joint ventures	987,098	287,665
	2,233,012	**1,671,293**

Material associate and other associates

HOCHTIEF Aktiengesellschaft holds 20% minus one share of Abertis HoldCo, S.A. (Abertis), Madrid, Spain. The Group exerts influence on the associate's operating policy and has significant influence within the meaning of IAS 28. HOCHTIEF Aktiengesellschaft's interest in Abertis HoldCo, S.A. is therefore accounted for in the Consolidated Financial Statements as an associate using the equity method.

(EUR thousand)	Dec. 31, 2025	Dec. 31, 2024

The 2024 financial year includes the amounts of Thiess as a joint venture until full consolidation on April 23, 2024.

Profit from equity-method joint ventures contained EUR 4,581 thousand (2024: EUR 8,991 thousand) in impairment losses and EUR 6,155 thousand (2024: EUR 0 thousand) in reversal of impairment losses. .

Investments in joint ventures are pledged within the framework of project financing in the amount of EUR 49,176 thousand (2024: EUR 64,806 thousand).

17. Other financial assets

(EUR thousand)	Dec. 31, 2025	Dec. 31, 2024
Non-consolidated subsidiaries	748	623
Other participating interests	232,044	86,762
Non-current marketable securities	44,139	49,867
	276,931	**137,252**

Impairment losses of EUR 94 thousand (2024: EUR 12 thousand) were recognized on non-consolidated subsidiaries in the reporting year. In addition, there were impairments of EUR 3,647 thousand in 2025 (2024: 18,079 thousand) and impairment reversals of EUR 365 thousand (2024: EUR 1,488 thousand) in other participating interests. As in the prior year, sundry other assets are not subject to any restrictions in the reporting year.

18. Financial receivables

	Dec. 31, 2025		Dec. 31, 2024	
(EUR thousand)	Non-current	Current	Non-current	Current
Loans to non-consolidated subsidiaries and to participating interests	46,672	1,933	59,736	4,039
Financial receivables from non-consolidated subsidiaries	300	546	–	206
Financial receivables from participating interests	–	20,982	779	8,002
Interest accruals	–	15,932	–	12,287
Other financial receivables	211,711	93,001	73,816	29,367
	258,683	**132,394**	**134,331**	**53,901**

Loans to and financial receivables from equity-accounted companies total EUR 67,788 thousand (2024: EUR 70,541 thousand).

19. Trade receivables and other receivables

(EUR thousand)	**Dec. 31, 2025**	Dec. 31, 2024
Trade receivables	4,821,478	4,337,564
Contract assets	2,502,161	2,538,319
Other receivables and other assets	1,020,040	694,056
	8,343,679	**7,569,939**

Trade receivables consist of non-current receivables in the amount of EUR 72,878 thousand (2024: EUR 0 thousand) and current liabilities in the amount of EUR 4,748,600 thousand (2024: EUR 4,337,564 thousand).

Trade receivables include receivables from equity-accounted companies in the amount of EUR 56,348 thousand (2024: EUR 7,224 thousand).

Performance not yet billed is accounted for in contract assets if progress payments do not exceed cumulative performance (contract costs and contract earnings). Where the net amount after deduction of progress payments is negative, the difference is presented under contract liabilities.

The change in the receivables balances is mainly due to performance completed and payments received in the operating business and to reclassifications to trade receivables. Contract assets include contract obtaining/fulfilment costs of EUR 90,661 thousand (2024: EUR 92,933 thousand).

Other receivables and other assets are made up as follows:

	Dec. 31, 2025		Dec. 31, 2024	
(EUR thousand)	Non-current	Current	Non-current	Current
Entitlements from sales of participating interests	–	308,116	–	–
Claims for damages and claims under guarantee	–	148,060	–	133,312
Prepaid expenses	25,912	118,629	22,210	122,596
Insurance contract assets	19,468	51,354	16,290	72,629
Derivative receivables	69,496	436	36,233	11,646
Tax receivables (excluding income taxes)	–	58,762	–	59,432
Pension fund credit balances	10,821	–	9,596	–
Sundry other assets	113,742	95,244	114,531	95,581
	239,439	**780,601**	**198,860**	**495,196**

Entitlements from sales of participating interests are attributable to the sale of UGL Transport with EUR 159,866 thousand and to the sale of Leakes Road with EUR 148,250 thousand.

Prepaid expenses consist of insurance premiums and other prepayments.

Claims for damages and claims under guarantee include EUR 146,700 thousand (2024: EUR 131,734 thousand), mainly in reimbursement claims under insurance policies held by the Turner Group.

As in the prior year, sundry other assets are not subject to any restrictions in the reporting year.

20. Income tax assets

EUR 116,858 thousand (2024: EUR 204,008 thousand) in income tax assets comprise amounts receivable from domestic and foreign tax authorities. These consist of EUR 11 thousand (2024: EUR 57,885 thousand) classified as non-current assets and EUR 116,847 thousand (2024: EUR 146,123 thousand) classified as current income tax assets.

21. Deferred taxes

Deferred tax assets and liabilities break down as follows:

	Dec. 31, 2025		Dec. 31, 2024		2025	2024
(EUR thousand)	Deferred tax assets	Deferred tax liabilities	Deferred tax assets	Deferred tax liabilities	changes recognized in profit and loss	
Non-current assets

Trade payables	6,103	80,518	6,770	89,102	1,749	19,979
Sundry current liabilities	108,183	12,608	87,754	-11,973	(17,712)	(10,960)
	657,195	**656,890**	**572,103**	**531,308**	**(11,886)**	**44,138**
Losses carried forward	255,952	–	256,472	–	(13,487)	(86,841)
Interest expense carried forward	–	–	–	–	–	–
Gross amount	**913,147**	**656,890**	**828,575**	**531,308**	**(25,373)**	**(42,703)**
Offsetting item	523,209	523,209	316,914	316,914	–	–
Reported amount	**389,938**	**133,681**	**511,661**	**214,394**	**–**	**–**

Deferred tax assets are normally recognized for tax-deductible temporary differences if it is probable that taxable profit will be available against which the deductible temporary differences can be utilized.

Deferred tax assets and deferred tax liabilities are offset within each company or tax group. The EUR 913,147 thousand (2024: EUR 828,575 thousand) gross amount of deferred tax assets includes the following tax refund entitlements arising from the expected future use of tax loss carryforwards and tax credits:

(EUR thousand)	Dec. 31, 2025	Dec. 31, 2024
Corporate income tax (or comparable foreign income tax)	233,589	244,532
German municipal trade tax	22,363	11,940
	255,952	**256,472**

Deferred tax assets are only recognized for tax loss carryforwards in so far as it is sufficiently certain that the tax loss carryforwards can be utilized. To the extent that no sufficient taxable temporary differences are available, expected taxable income for the purpose of measuring deferred taxes on deductible temporary differences and/or tax loss carryforwards is derived from expected figures, taking account of restrictions due to rules to be observed with regard to minimum taxation.

Tax loss carryforwards in respect of German and foreign corporate income tax and municipal trade tax for which no deferred tax assets have been recognized amount to EUR 1,441,566 thousand (2024: EUR 2,084,325 thousand) in respect of corporate income tax and EUR 1,240,637 thousand (2024: EUR 1,437,893 thousand) in respect of municipal trade tax.

Deferred tax assets have not been recognized for EUR 157,994 thousand (2024: EUR 139,331 thousand) in tax loss carryforwards that are subject to a time limit. EUR 53,987 thousand (2024: EUR 58,579 thousand) has a time limit of three years. EUR 102,855 thousand (2024: EUR 77,706 thousand) expire within seven years and EUR 1,152 thousand within 20 years (2024: EUR 3,046 thousand).

The amount of deductible temporary differences for which no deferred tax asset was recognized in the balance sheet is EUR 15,519 thousand (2024: EUR 52,531 thousand).

German and foreign Group companies that generated losses in 2025 or prior years have EUR 53,929 thousand (2024: EUR 49,292 thousand) in unimpaired deferred tax assets relating to temporary differences or tax loss carryforwards. The recognition of the deferred tax asset in respect of tax losses is supported by the Group's forecast future taxable profits, with reference to current levels of order backlog, pipeline and past performance.

No deferred tax assets have been recognized in relation to interest expense carryforwards in the amount of EUR 451,188 thousand (2024: EUR 424,393 thousand). The change in the interest expense carryforward figures relates to adjustments made on the basis of tax audits and ongoing changes.

No deferred tax liabilities have been recognized on temporary differences in the amount of EUR 5,304 thousand (2024: EUR 6,524 thousand) in connection with investments in subsidiaries because the Group is able to control the timing of the reversal of the temporary differences and it is not probable that they will reverse in the foreseeable future.

Deferred taxes recognized directly in equity were as follows in 2025:

(EUR thousand)	**2025**	2024
Changes in deferred taxes recognized directly in equity	(66,383)	(8,816)
Of which: Consolidation changes / other	(35,132)	(1,321)
Of which: Currency translation differences	(11,728)	(6,463)
Of which: Deferred taxes recognized in other comprehensive income for the measurement of primary and derivative financial instruments not affecting profit and loss	1,356	1,173
Of which: Deferred taxes recognized in other comprehensive income for remeasurements of defined benefit plans	(20,879)	(2,205)

22. Inventories

(EUR thousand)	**Dec. 31, 2025**	Dec. 31, 2024
Work in progress	173,914	205,438
Raw materials and supplies	166,742	353,179
Prepayments	33,233	10,780
Finished goods	638	500
	374,527	**569,897**

Borrowing costs of EUR 10,302 thousand were capitalized under work in progress in accordance with IAS 23 (2024: EUR 9,494 thousand). The borrowing costs were determined on the basis of interest rates between 3.52% and 5.81% (2024: between 2.16% and 5.81%).

As in the prior year, inventories are not subject to any restrictions.

23. Marketable securities

Marketable securities totaling EUR 847,074 thousand (2024: EUR 810,947 thousand) mainly consist of fixed-income securities with maturities of more than three months on acquisition where there is no intention to hold the securities to maturity. They also include shares measured at fair value through other comprehensive income, and securities held in special and investment funds. Shares are not acquired for the purpose of selling in the short term.

Marketable securities are pledged as security for employee benefit entitlements under semi-retirement programs in the amount of EUR 3,000 thousand (2024: EUR 3,030 thousand).

Outside of externally managed investments, direct investment activities are exclusively restricted to the purchase of bonds from top-class issuers with broad diversification to ensure that concentration risks relative to specific issuers are strictly avoided.

24. Cash and cash equivalents

Cash and cash equivalents total EUR 6,226,042 thousand (2024: EUR 5,720,598 thousand) and comprise cash in hand, cash at banks, and marketable securities with maturities at the time of acquisition of no more than three months. These are subject to an insignificant risk of changes in value. Some cash and cash equivalents in the amount of EUR 265,080 thousand are restricted in relation to the sale of receivables. In the previous year, cash and cash equivalents of EUR 279,026 thousand were restricted.

25. Equity

The Consolidated Statement of Changes in Equity is part of the Consolidated Financial Statements.

The Company's capital stock is divided into 77,711,300 no-par-value bearer shares and amounts to EUR 198,940,928.00. Each share accounts for EUR 2.56 of capital stock. As of December 31, 2025, HOCHTIEF Aktiengesellschaft held a total of 2,469,695 (2024: 2,480,121) shares of treasury stock as defined in Section 160 (1) 2 of the German Stock Corporations Act (AktG). These shares were purchased from October 7, 2014 onward for the purposes provided for in the resolutions of the Annual General Meeting of May 7, 2014, May 6, 2015, and April 28, 2020, and for all other purposes permitted under stock corporation law (AktG). The holdings of treasury stock represent EUR 6,322,419.20 (3.18%) of the Company's capital stock, compared with EUR 6,349,109.76 and 3.19% in the prior year.

In May 2025, 10,426 shares of treasury stock were transferred to members and former members of the Company's Executive Board at a price of EUR 166.00 per share on condition that the shares be held for at least two and at least three years after transfer. The transfer settled the transferees' variable compensation entitlements. The shares represent EUR 26.690,56 (0.0134%) of the Company's capital stock.

The capital reserve comprises EUR 2,062,398 thousand constituting the premium on shares issued by HOCHTIEF Aktiengesellschaft—as in the prior year—together with EUR 6,043 thousand (2024: EUR 5,032 thousand) for the book gain on the sale of treasury stock, and the capital stock represented by the shares canceled in 2016 (EUR 12,824 thousand) and 2014 (EUR 19,688 thousand). The change in 2025 in the amount of EUR 1,011 thousand relates to the book gain on the transfer of 10,426 treasury shares to members of the Company's Executive Board.

Distributable profit is identical for HOCHTIEF Aktiengesellschaft and the HOCHTIEF Group. A dividend of EUR 393.459 thousand was paid out in the reporting year (2024: EUR 330,939 thousand).

The Executive Board is unaware of any restrictions on voting rights or on transfers of shares.

There are no shares with special control rights. The Executive Board is not aware of any employee shares where the control rights are not exercised directly by the employees.

Statutory rules on the appointment and replacement of Executive Board members are contained in Sections 84 and 85 and statutory rules on the amendment of the Articles of Association in Sections 179 and 133 of the German Stock Corporations Act (AktG). Under Section 7 (1) of the Company's Articles of Association, the Executive Board comprises at least two individuals. Section 23 (1) of the Articles of Association provides that resolutions of the Annual General Meeting require a simple majority of votes cast unless there is a statutory requirement stipulating a different majority. In instances where the Act requires a majority of the capital stock represented at the time of the resolution in addition to a majority of votes cast, Section 23 (3) of the Articles of Association provides that a simple majority will suffice unless there is a mandatory requirement stipulating a different majority.

Pursuant to the resolution of the Annual General Meeting of April 27, 2022 and to Section 4 (5) of the Articles of Association inserted in accordance with that resolution, the Executive Board is authorized, subject to Supervisory Board approval, to increase the capital stock by issuing new no-par-value bearer shares for cash and/or non-cash consideration in one or more issues up to a total of EUR 65,752 thousand by or before April 26, 2027 (Authorized Capital I). Detailed provisions are contained in the stated section of the Articles.

Pursuant to the resolution of the Annual General Meeting of April 26, 2023, the Executive Board is authorized, subject to Supervisory Board approval, to increase the capital stock by issuing new no-par-value bearer shares for cash and/or non-cash consideration in one or more issues up to a total of EUR 33,718 thousand by or before April 25, 2028 (Authorized Capital II). Detailed provisions are contained in the stated section of the Articles.

Pursuant to the resolution of the Annual General Meeting of April 27, 2022 and thus to the revised Section 4 (4) of the Articles of Association, the Company's capital stock has been conditionally increased by up to EUR 51,200 thousand divided into up to 20 million no-par-value bearer shares (conditional capital). The detailed stipulations are contained in the aforementioned section of the Articles of Association and the aforementioned resolution. Under that resolution, the Executive Board is authorized, subject to the approval of the Supervisory Board, to issue on one or more occasions in the period up to April 26, 2027 registered or bearer warrant-linked and/or convertible bonds, profit participation rights or participating bonds, or any combination of such instruments (collectively "bonds"), in an aggregate principal amount of up to EUR 2,000,000,000.00 with or without maturity restrictions and to grant or issue option rights or obligations to holders or creditors of warrant-linked bonds or of participatory notes with warrants or of warrant-linked participating bonds or to grant or issue conversion rights or obligations to holders or creditors of convertible bonds or convertible participatory notes or convertible participating bonds for up to 20 million no-par-value bearer shares in HOCHTIEF Aktiengesellschaft with an aggregate proportionate interest in the capital stock of up to EUR 51,200,000.00, as stipulated in greater detail in the terms and conditions of the bonds.

Authorization to repurchase shares:

The Company is authorized by resolution of the Annual General Meeting of April 27, 2022 to repurchase its own shares in accordance with Section 71 (1) 8 of the German Stock Corporations Act (AktG). This authorization expires on April 26, 2027. It is limited to 10% of the capital stock at the time of the Annual General Meeting resolution or at the time of exercising the authorization, whichever figure is smaller. The authorization can be exercised directly by the Company or by a company in its control or majority ownership or by third parties engaged by the Company or engaged by a company in its control or majority ownership and allows the share repurchase to be executed in one or more installments covering the entire amount authorized or any fraction. The repurchase may be effected through the stock exchange or by public offer to all shareholders, or by public invitation to all shareholders to tender shares for sale, or by issuing shareholders with rights to sell shares. The conditions governing the repurchase are set forth in detail in the resolution.

By resolution of the Annual General Meeting of April 27, 2022, the Executive Board is authorized, subject to Supervisory Board approval, in the event of a sale of shares of treasury stock effected by way of an offer to all shareholders, to issue subscription rights to the shares to holders of warrant-linked and/or convertible bonds issued by the Company or by any subordinate Group company. The Executive Board is also authorized, subject to Supervisory Board approval, to sell shares of treasury stock other than through the stock exchange and other

than by way of an offer to all shareholders, provided that the shares are sold for cash at a price not substantially below the current stock market price for Company shares of the same class at the time of sale.

The HOCHTIEF Aktiengesellschaft Executive Board is further authorized, subject to Supervisory Board approval and the conditions set out in the following, to offer and transfer shares of treasury stock to third parties other than through the stock exchange and other than by way of an offer to all shareholders. Such transactions may take place in the course of acquisitions of business enterprises in whole or part or of other assets and in the course of mergers. They are also permitted for the purpose of obtaining a listing for the Company's shares on foreign stock exchanges where it is not yet listed. The shares may furthermore be offered for purchase by employees or former employees of the Company or its affiliates. Holders of bonds which the Company or a Group company subordinate to it issues or has issued may also be issued with the shares upon exercising the warrant and/or conversion rights and/or obligations attached to the bonds.

The shares may also, on condition that they be held for at least two years after transfer, be transferred to (current or past) members of the Executive Board of the Company and to (current or past) members of the executive boards and general management of companies under its control within the meaning of Section 17 of the German Stock Corporations Act (AktG), and to current or past employees of the Company or of a company under its control within the meaning of Section 17 AktG. Such transfers are only permitted for the purpose of settling the transferees' variable compensation entitlements. Further conditions of transfer are detailed in the resolution. Where shares are issued to members of the Executive Board of the Company, the decision to issue the shares is taken solely by the Supervisory Board.

Shareholders' statutory subscription rights to such shares are exempt pursuant to Sections 71 (1) 8 and 186 (3) and (4) of the German Stock Corporations Act (AktG) to the extent that the shares are used in exercise of the authorizations set out above.

The Executive Board is also authorized, subject to the Supervisory Board approval, to cancel shares of treasury stock without a further resolution of the Annual General Meeting being required for the cancellation itself or its execution.

The conditions governing awards of subscription rights and the sale, transfer, and cancellation of treasury stock are set forth in detail in the Annual General Meeting resolution.

By a further resolution of the Annual General Meeting of April 27, 2022, the Company is authorized to acquire shares of treasury stock in accordance with Section 71 (1) 8 AktG using equity derivatives as well as to exclude shareholders' rights to sell shares and subscription rights. This is not intended to increase the volume of shares that may be purchased; instead, it merely opens the way for other alternatives to purchase shares of treasury stock within and against the upper limit set in the aforementioned authorization. The Executive Board has been authorized to acquire options which, when exercised, entitle the Company to acquire shares of the Company (call options). Furthermore, the Executive Board has been authorized to sell options which, when exercised by their holder, require the Company to acquire shares of the Company (put options). Moreover, the shares can be acquired using a combination of call and put options or forward purchase agreements. Additional details of the conditions for the use of equity derivatives in the acquisition of treasury stock and for the exclusion of shareholders' rights to sell and subscription rights are set out in the Annual General Meeting resolution.

Non-controlling interests total EUR 121,602 thousand (2024: EUR 123,730 thousand) and represent that portion of the equity of consolidated Group companies which is attributable to third parties.

Accumulated other comprehensive income is part of retained earnings. It includes amounts recognized in equity for changes in the fair value of derivative and non-derivative financial instruments and exchange differences from translation of foreign entity financial statements. Accumulated other comprehensive income also includes the Group's share of changes recognized directly in the other comprehensive income of equity-method associates and joint ventures, plus the portion of other comprehensive income from the remeasurement of defined benefit plans that will not subsequently be reclassified to profit or loss.

The changes in other comprehensive income are presented on a year-on-year basis in the following table:

(EUR thousand)	**2025**	2024
Currency translation differences		
Changes in other comprehensive income for the period	(148,628)	42,450
Amounts reclassified to profit or loss	27,000	(989)
	(121,628)	**41,461**
Changes in fair value of financial instruments – primary		
Changes in other comprehensive income for the period	(79,273)	97,124
Amounts reclassified to profit or loss	(5,056)	6,916
	(84,329)	**104,040**
Changes in fair value of financial instruments – derivative		
Changes in other comprehensive income for the period	20,580	(15,173)
Amounts reclassified to profit or loss	–	–
	20,580	**(15,173)**
Share of other comprehensive income of equity-method associates and joint ventures		
Changes in other comprehensive income for the period	(118,603)	(72,791)
Amounts reclassified to profit or loss	2,649	(7,905)
	(115,954)	**(80,696)**
Remeasurement of defined benefit plans	**50,546**	**(3,023)**
Other comprehensive income after tax	**(250,785)**	**46,609**

The income tax effects relating to changes in other comprehensive income are distributed as follows:

		2025			2024	
(EUR thousand)	Before tax	Taxes	After tax	Before tax	Taxes	After tax
Currency translation differences	(121,628)	–	(121,628)	41,461	–	41,461
Changes in fair value of financial instruments – primary	(89,817)	5,488	(84,329)	107,147	(3,107)	104,040
Changes in fair value of financial instruments – derivative	24,712	(4,132)	20,580	(19,453)	4,280	(15,173)
Share of other comprehensive income of equity-method associates and joint ventures	(115,954)	–	(115,954)	(80,696)	–	(80,696)
Remeasurement of defined benefit plans	71,425	(20,879)	50,546	(818)	(2,205)	(3,023)
Other comprehensive income	**(231,262)**	**(19,523)**	**(250,785)**	**47,641**	**(1,032)**	**46,609**

26. Share-based payment

The following share-based payment plans were in force for managerial staff of HOCHTIEF Aktiengesellschaft and its affiliates in 2025:

Long-term Incentive Plan 2021

The Long-term Incentive Plan 2021 (LTIP 2021) was launched by resolution of the Supervisory Board in 2021 and was open to Executive Board members and selected managerial employees. The plan was based on performance stock awards.

The conditions stipulated that for each performance stock award (PSA) exercised within a two-year exercise period following a three-year waiting period, entitled individuals received from the issuing entity a payment entitlement equal to the closing price of HOCHTIEF stock on the last stock market trading day before the exercise date, plus a performance bonus. The size of the performance bonus depended for each company on the relevant cash performance indicator in the last three years before the exercise date. For the members of the Executive Board and managerial employees of HOCHTIEF Aktiengesellschaft, the performance bonus depended on adjusted free cash flow in the last complete year before the exercise date.

The gain was limited to EUR 292.95 per PSA.

The plan was exercised in full in 2025.

Long-term Incentive Plan 2022

The Long-term Incentive Plan 2022 (LTIP 2022) was launched by resolution of the Supervisory Board in 2022 and was open to Executive Board members. The plan was based on performance stock awards.

The conditions stipulated that for each performance stock award (PSA) exercised within a two-year exercise period following a three-year waiting period, entitled individuals received a payment entitlement equal to the closing price of HOCHTIEF stock on the last stock market trading day before the exercise date, plus a performance bonus. The size of the performance bonus depended on the adjusted free cash flow of the last complete year before the exercise date.

The gain was limited to EUR 261.03 per PSA.

The plan was exercised in full in 2025.

Long-term Incentive Plan 2023

The Long-term Incentive Plan 2023 (LTIP 2023) was launched by resolution of the Supervisory Board in 2023 and is open to Executive Board members. The plan is based on performance stock awards.

The conditions stipulate that for each performance stock award (PSA) exercised within a two-year exercise period following a three-year waiting period, entitled individuals receive a payment entitlement equal to the closing price of HOCHTIEF stock on the last stock market trading day before the exercise date, plus a performance bonus. The size of the performance bonus depends on the adjusted free cash flow of the last complete year before the exercise date.

The gain is limited to EUR 262.08 per PSA.

Long-Term-Incentive-Plan 2024

The Long-term Incentive Plan 2024 (LTIP 2024) was launched by resolution of the Supervisory Board in 2024 and is open to Executive Board members. The plan is based on performance stock awards.

The conditions stipulate that for each performance stock award (PSA) exercised within a two-year exercise period following a three-year waiting period, entitled individuals receive a payment entitlement equal to the closing

price of HOCHTIEF stock on the last stock market trading day before the exercise date, plus a performance bonus. The size of the performance bonus depends on the adjusted free cash flow of the last complete year before the exercise date.

The gain is limited to EUR 463.32 per PSA.

Long-Term-Incentive-Plan 2025

The Long-term Incentive Plan 2025 (LTIP 2025) was launched by resolution of the Supervisory Board in 2025 and is open to Executive Board members. The plan is based on performance stock awards.

The conditions stipulate that for each performance stock award (PSA) exercised within a two-year exercise period following a three-year waiting period, entitled individuals receive a payment entitlement equal to the closing price of HOCHTIEF stock on the last stock market trading day before the exercise date, plus a performance bonus. The size of the performance bonus depends on the adjusted free cash flow of the last complete year before the exercise date.

The gain is limited to EUR 627.75 per PSA.

The conditions of all plans stipulate that on exercise—and on the fulfillment of all other requisite criteria—HOCHTIEF Aktiengesellschaft normally has the option of delivering HOCHTIEF shares instead of paying out the gain in cash. Where the entitled individuals are not employees of HOCHTIEF Aktiengesellschaft, the expense incurred on exercise is borne by the affiliated company concerned.

The quantities granted, expired, and exercised under the plans so far are as follows:

	Originally granted	Outstanding at Dec. 31, 2024	Granted in 2025	Expired in 2025	Exercised/ settled in 2025	**Outstanding at Dec. 31, 2025**
LTIP 2021 – performance stock awards	12,857	800	–	–	800	0
LTIP 2022 – performance stock awards	3,133	3,133	–	–	3,133	0
LTIP 2023 – performance stock awards	34,364	34,364	–	–	–	34,364
LTIP 2024 – performance stock awards	19,312	19,312	–	–	–	19,312
LTIP 2025 – performance stock awards	–	–	13,043	–	–	13,043

Provisions recognized for the stated share-based payment arrangements totaled EUR 11,047 thousand as of the balance sheet date (2024: EUR 5,464 thousand). The total expense recognized for the stated arrangements in 2025 was EUR 6,635 thousand (2024: EUR 5,610 thousand). The intrinsic value of plans exercisable at the end of the reporting period was EUR 0 (2024: EUR 78 thousand).

ACS Long-term Incentive Plan 2

As part of the launch of the Long-Term Incentive Plan 2023-2028 by the main shareholder ACS, stock options were granted by ACS to some Executive Board members of HOCHTIEF Aktiengesellschaft and certain executives in the HOCHTIEF Group in 2023. As the parent company, ACS owes the share-based payment to employees of the HOCHTIEF Group. HOCHTIEF does not have the obligation to settle the share-based remuneration. In accordance with IFRS 2, HOCHTIEF as the recipient of the work performance treats this as an equity-settled share-based payment. The following terms and conditions apply:

(a) The maximum number of granted options is 3,390,000.

(b) The beneficiaries are 90 executives with options from 15,000 to 240,000.

(c) The strike price will be EUR 31.55 per share.

(d) The options were granted to the executives on July 1, 2023 and cannot be exercised for three years from the grant date, ending the exercise date on June 30, 2028.

(e) In order to execute the options granted to each beneficiary, additional to the service condition required until the exercise date, the operational, financial and sustainability performance of the ACS Group in 2023–2025 must be compliant with the ACS Group's objectives. The criteria chosen for meeting these objectives are:

- With a weighting of 40%, the Total Shareholder Return ("TSR") in the period of 2023–2025 must be higher than the median of main companies in the sector with comparable stock market capitalization and international status to ACS. In this case, the executive receives 100% of the awards assigned in this section. If the TSR in this period is less than the 25th percentile of the comparable sample, the executive receives no awards for this section. If the TSR is between the 25th and 50th percentile of the sample, the executive will receive a proportional number of rewards to result (0% for the 25th percentile and 100% for the 50th percentile).

- With a weighting of 40%, the average Return on Equity ("ROE") of the ACS Group in 2023–2025, measured as the percentage of net profit over equity for the previous year (Net Profit / Equity), must be more than 10%. In the case of a lower result, the executive will be granted no awards.

- With a weighting of 20%, the average percentile obtained in the Dow Jones Sustainability Index ("DJSI") in 2023–2025 must be greater than 85%. In this case, the executive receives 100% of the awards assigned in this section. If the average DJSI percentile in the measurement period is less than the 60th percentile, the executive receives no awards in this section. If the result is between the 60th and 85th percentile, the executive will receive a proportional number of rewards to result (0% for the 60th percentile and 100% for the 85th percentile).

The share-based remuneration is recognized as personnel expenses in the consolidated income statement, with a balancing entry in equity (EUR 1.5 million as of December 31, 2025; 2024: EUR 1.5 million).

27. Provisions for pensions and similar obligations

Defined benefit plans

Under defined benefit plans, the Company's obligation is to provide agreed benefits to current and former employees. The main pension obligations in Germany consist of direct commitments under the current 2000+ pension plan and deferred compensation plans. The 2000+ plan in force since January 1, 2000 takes the form of a modular defined contribution plan. The size of the annual pension component depends on employee income and age (resulting in an annuity conversion factor) and a general pension contribution reviewed by HOCHTIEF Aktiengesellschaft every three years and adjusted as necessary. The future pension amount is the sum total of the pension components earned each year. In isolated instances, length-of-service and final salary pension arrangements are in existence for executive staff, although except at Executive Board level such arrangements have no longer been offered since 1995. Benefits comprise an old-age pension, an invalidity pension, and a surviving dependents' pension, and in almost all cases are granted as a life-long annuity.

Up to December 31, 2013, employees in Germany additionally had the option of deferred compensation in a company pension plan. The deferred compensation was invested in selected investment funds. The pension amount is based on the present value of acquired fund units at retirement, subject to a minimum of the deferred compensation amount plus an increment that is guaranteed by HOCHTIEF and ranges from 3.50% down to 1.75% p.a. There is a choice at retirement between a lump-sum payment and an annuity for five or six years.

Outside of Germany, there are defined benefit pension plans at HOCHTIEF (UK) in the United Kingdom. HOCHTIEF (UK) has a length-of-service, final salary pension plan. For each year of service, 1/75th of the eligible final salary is granted as a monthly pension. Benefits comprise an old-age pension, an invalidity pension, and a surviving dependents' pension. The commitments at Turner comprise post-employment benefits in the form of medical care for retirees.

Defined benefit obligations in the HOCHTIEF Group are made up as follows:

		Dec. 31, 2025	
(EUR thousand)	Germany	USA	UK
Active members	62,971	–	6,437
Final salary	6,315	–	6,437

Final salary	6,806	–	6,408
Not final salary	63,028	–	–
Vested benefits	95,512	–	12,321
Retirees	410,036	–	18,480
Similar obligations	73	59,340	–
Total	**575,455**	**59,340**	**37,209**
Duration in years (weighted)	**11.6**	**11.6**	**12.0**

Plan assets

Germany

There are no statutory or regulatory minimum funding requirements for pension plans in Germany. Domestic pension obligations are fully funded. The funded plans take the form of a contractual trust arrangement (CTA). The transferred assets are administered by an external trustee and serve exclusively to fund domestic pension obligations. The transferred cash is invested in the capital market in accordance with investment principles set out in the trust agreement and the investment guidelines. Investment decisions are not made by the trustee but by an investment committee.

The investment guidelines and decisions are based on the findings of an asset liability matching (ALM) study compiled by outside specialists at regular intervals of three to five years. This uses Monte Carlo simulation to model the development of the pension liabilities and other key economic factors over a very long forward horizon and in numerous combinations. Based on the ALM study, a range of criteria are then applied to determine the optimum asset allocation in order to ensure that pension liabilities can be met in the long term.

To assure an optimum conservative risk structure, we have also established risk overlay management using the services of an external overlay manager who is given a fixed annual risk budget and works fully autonomously in a clearly structured risk overlay management process. HOCHTIEF aims to ensure full funding of pension obligations and to fund new vested benefits on the basis of current service cost annually or at least on a timely basis. The companies pay in additional amounts from time to time in the event of any shortfall. Pension commitments in Germany in excess of the contribution assessment ceiling applied in the statutory pension insurance scheme are additionally covered using pension liability insurance. Pension liabilities from deferred employee compensation offered up to December 31, 2013 were funded by the purchase of retail fund units. Funding of the obligations served by HOCHTIEF Pension Trust e. V. as of December 31, 2025 is about 58% (2024: 54%); the figure for Germany as a whole is about 66% (2024: 61%).

UK

Funding of plan assets at HOCHTIEF (UK) is likewise on a trust basis. Statutory minimum funding requirements apply. If funding is insufficient to make up a funding shortfall, an additional restructuring plan is drawn up. Plan funding is reviewed at least once every three years. Funding of pension obligations at HOCHTIEF (UK) is about 90% (2024: 84%).

Defined benefit obligations are covered by plan assets as follows:

Coverage of defined benefit obligations by plan assets

	Dec. 31, 2025		Dec. 31, 2024	
(EUR thousand)	Defined benefit obligations	Plan assets	Defined benefit obligations	Plan assets
Uncovered by plan assets	53,461	–	59,340	–
Partially covered by plan assets	485,166	296,637	547,997	309,658
Not fully covered by plan assets	**538,627**	**296,637**	**607,337**	**309,658**
Fully covered by plan assets	59,334	70,155	64,667	74,263
Total	**597,961**	**366,792**	**672,004**	**383,921**

Actuarial assumptions

The size of pension provisions is determined on an actuarial basis. This necessarily involves estimates. Specifically, the actuarial assumptions used are as follows:

	2025			2024		
(Percent)	Germany	USA	UK	Germany	USA	UK
Discount factor*	4.13	5.30	5.60	3.53	5.20	5.55
Salary increases	2.75	–	2.50	2.75	–	2.65
Pension increases*	2.00[1]	–	3.15	2.00[1]	–	3.30

* Weighted average
[1] Assuming no guaranteed increase of 1.00% p.a. In 2024, a blanket 5.0% increase was incorporated for the next adjustment date (May 1, 2025).

The discount factors are derived from the Mercer Pension Discount Yield Curve (MPDYC) model, taking into account the company-specific duration of pension liabilities.

Mortality assumptions are based on published country-specific statistics and experience. The following mortality tables were used in the actuarial calculation of pension obligations:

Germany	Heubeck Richttafeln 2018 G
USA	PRI2012 table projected generationally with MP2021
UK	102% of S4PxA for males and females CMI_2023 [1,25 %] year of birth

The present value of defined benefit obligations and the market value of plan assets have changed as follows:

Changes in the present value of defined benefit obligations

	2025			2024		
(EUR thousand)	Domestic	International	Total	Domestic	International	Total
Defined benefit obligations at start of year	**575,455**	**96,549**	**672,004**	**590,798**	**85,435**	**676,233**

Investing plan assets to cover future pension obligations generated an actual return of EUR 15,691 thousand (2024: EUR 22,768 thousand).

The pension provisions are determined as follows:

Reconciliation of pension obligations to provisions for pensions and similar obligations

(EUR thousand)	Dec. 31, 2025	Dec. 31, 2024
Defined benefit obligations	597,961	672,004
Less plan assets	366,792	383,921
Funding status	**231,169**	**288,083**
Assets from overfunded pension plans	10,821	9,596
Provision for pensions and similar obligations	**241,990**	**297,679**

The fair value of plan assets is divided among asset classes as follows:

Composition of plan assets

Dec. 31, 2025	Fair value

Past service cost	–	158	158	–	6,250	6,250
Total personnel expense	**2,747**	**1,660**	**4,407**	**2,251**	**7,754**	**10,005**
Interest expense for accrued benefit obligations	19,647	4,775	24,422	20,088	4,577	24,665
Interest on plan assets	(12,357)	(1,692)	(14,049)	(12,555)	(1,555)	(14,110)
Net interest expense (net investment and interest income)	**7,290**	**3,083**	**10,373**	**7,533**	**3,022**	**10,555**
Total amount recognized in profit or loss	**10,037**	**4,743**	**14,780**	**9,784**	**10,776**	**20,560**

In addition to the expenses recognized in profit or loss, the Consolidated Statement of Comprehensive Income includes 71,425 thousand (2024: minus EUR 818 thousand) in remeasurements of defined benefit plans in 2025 before deferred taxes and after changes in the scope of consolidation and exchange rate. Before deferred taxes, the cumulative amount is minus EUR 272,999 thousand (2024: minus EUR 344,424 thousand).

The Turner Group's obligations to meet healthcare costs for retired staff are included in pension provisions due to their pension-like nature. The defined benefit obligation as of December 31, 2025 came to EUR 53,461 thousand (2024: EUR 59,340 thousand). Healthcare costs accounted for EUR 1,410 thousand (2024: EUR 1,399 thousand) of the current service, EUR 158 thousand (2024: EUR 6,250 thousand) of the past service cost and EUR 2,817 thousand (2024: EUR 2,703 thousand) of the interest expense.

Sensitivity analysis

Pension obligations in the HOCHTIEF Group are subject to the following material risks:

Interest rate risk

For defined contribution plans, (notional) contributions are translated into benefits using a table of fixed interest rates, independent of the current market interest rate. HOCHTIEF thus bears the risk of general capital market interest rate changes with regard to the determination of benefits. Pension obligations have increased significantly in recent years due to the generally low level of capital market interest rates. The correspondingly strong impact is due to the relatively long term of the obligations.

Inflation risk

By law, company pensions in Germany must be raised level with the inflation rate at least every three years. German company pensions under the 2000+ plan rise at a fixed 1% p.a., hence there is only minor inflation risk in the pension phase. Turner plans are free from inflation risk.

Longevity risk

The granting of life-long pensions means that HOCHTIEF bears the risk of pensioners living longer than actuarial calculations predict. This risk normally averages out across all pension plan members and only comes into play if life expectancy is greater than expected.

The impact of the stated risks on the defined benefit obligations under a corresponding change in actuarial assumptions is shown in the sensitivity analysis that follows:

Impact on the defined benefit obligation

	Dec. 31, 2025					
	Domestic		International		Total

Future cash flows

Benefit payments

As of December 31, 2025, anticipated pension payments for future years are as follows:

(EUR thousand)	
Due in 2026	43,253
Due in 2027	42,315
Due in 2028	41,830
Due in 2029	42,696
Due in 2030	41,900
Due in 2031 to 2035	198,195

Contributions to defined benefit plans

Contributions to defined benefit plans in 2026 are expected to be EUR 5,053 thousand.

Defined contribution plans

Under defined contribution plans, the Company pays into a state or private pension fund voluntarily or in accordance with statutory or contractual stipulations. It has no obligation to pay further contributions.

There are different defined contribution pension plans at Turner in the USA and at CIMIC in Australia. For Turner's plan, and depending on years of service, Turner contributes an employer matching contribution that is either 2.5%, 3.75% or 5%. Additionally, Turner contributes an earnings based employer contribution that is between 3% to 9% of an employee's salary. The participant's 401k account is held at an external Trust managed by the recordkeeper, Fidelity. Turner employees have an option to defer a portion of their base pay up to the annual IRS limits into this plan. All eligible employees are automatically enrolled in the plan immediately upon hire, and are vested in the company's contributions after three years' service. Tax relief is granted on most payments, although it is also possible to pay contributions from taxed income and receive the investment earnings free of tax; the investment risk is borne by employees. Since July 1, 2025, CIMIC in Australia has paid 12.00% (previously 11.50%) of the wage and salary total into the statutory pension (superannuation) scheme. Employees have a choice of investment funds and bear the investment risk. They are able to pay top-up contributions on a voluntary basis. Tax relief is granted on top-up contributions.

The following amounts were paid into defined contribution plans and state pension schemes:

(EUR thousand)	2025	2024
Amounts paid into defined contribution plans		
CIMIC	206,073	202,148
Turner	76,770	73,986
Flatiron	–	11,763
Other	1,576	1,372
Total	**284,419**	**289,269**
Amounts paid into state pension schemes (employer share)	**31,017**	**28,130**

The costs are reported as part of personnel costs.

28. Other provisions

	Dec. 31, 2025			Dec. 31, 2024		
(EUR thousand)	Non-current	Current	Total	Non-current	Current	Total
Personnel-related provisions	216,149	451,499	667,648	213,293	447,373	660,666

Other provisions	**596,717**	**1,242,701**	**1,839,418**	**482,048**	**1,150,856**	**1,632,904**

Personnel-related provisions primarily comprise provisions for stock option schemes, holiday accrual, termination benefits, and early retirement arrangements.

Provisions for insurance claims are made up of liabilities for remaining coverage (pre-claims stage) and liabilities for incurred claims (claims stage after the occurrence of an insured event). The measurement of those provisions is based on a series of estimates and assumptions, particularly the estimate of future cash flows as well as the procedures and inputs for determining both the discount rate and the risk adjustment for non-financial risk. At each reporting date, the fulfilment cash flows for the provisions are remeasured using current discount rates. IFRS 17 provides for the option, applied at portfolio level, to recognize the impact of changes in discount rates and financial risk in other comprehensive income rather than in the consolidated income statement. This option is used at HOCHTIEF.

Provisions for project losses comprise EUR 147,977 thousand (2024: EUR 131,787 thousand) in current provisions for liabilities to customers of the Turner Group that are almost fully covered by insurance claims. The insurance claims are included in other receivables and other assets.

Items covered by sundry other provisions include contract administration, contract costs incurred subsequent to invoicing, payments for damages, and other uncertain liabilities. They are recognized on the basis of management estimates. At present HOCHTIEF expects the bulk of these provisions to be utilized in the short term, within the next year.

	3,406,607	**3,733,792**				

In respect of the existing EUR 1.7 billion long-term loan originally maturing in 2028, HOCHTIEF has exercised the second maturity date extension option to 2030. The total amount is divided into EUR 1.2 billion in guarantee facilities, EUR 0.5 billion in credit facilities, and EUR 0.3 billion in term loans with an initial three-year term. The term loan was refinanced early in July 2025 and now amounts to EUR 0.35 billion. The term of the new term loan has been adjusted to that of the syndicated loan and thus also ends in March 2030. These facilities are a core element of the Group's long-term financing strategy.

With a value date of 24 June 2025, a private placement denominated in Swiss francs totalling 50 million Swiss francs was repaid on time. The bond was issued in the 2019 financial year.

With a value date of July 3, 2025, a HOCHTIEF corporate bond issued in the 2018 financial year totalling EUR 403.367 million was repaid on time. The outstanding nominal amount of this bond was already reduced proportionately in June 2024 as part of a tender offer.

On September 30, 2025, HOCHTIEF Aktiengesellschaft placed a CHF 180 million bond with a maturity of 7 years and a coupon of 1.5125 percent per annum on the international capital market. The rating agency S&P has assigned the bond rating an investment-grade rating of BBB-. This issue further diversified and extended the maturity profile of HOCHTIEF's long-term financing. In addition, the circle of investors has been expanded, especially with regard to Swiss investors. The proceeds of the issue are intended for general corporate purposes, such as the refinancing of existing financial liabilities.

On October 16, 2025, HOCHTIEF Aktiengesellschaft issued a promissory note loan of EUR 210 million. The promissory note loan has a coupon with a variable interest rate, which results from the 6-month Euribor plus a margin. The term of the promissory note tranche is five years. The proceeds of the issue are intended for general corporate purposes, such as the refinancing of existing financial liabilities.

With a value date of 27 October 2025, two promissory note tranches issued in the 2022 financial year totalling EUR 153 million were repaid on time.

Financing activities in the segments

CIMIC

On 30 September 2025, CIMIC refinanced its AUD 625 million cash facility maturing in October 2026 early. As part of this, CIMIC took up a new revolving cash credit facility of AUD 717 million with a maturity of five years. In addition, two term loans of AUD 490 million and JPY 9.85 billion (AUD 94 million) were concluded, also with maturities of five years. As a result, the total loan amount was increased by a total of approximately AUD 682 million (EUR 387 million).

Amounts due to banks

	Carrying amount Dec. 31, 2025 (EUR thousand)	Average interest rate (%)	Carrying amount Dec. 31, 2024 (EUR thousand)	Average interest rate (%)
Variable-rate loans	3,175,058	5.09	2,760,723	5.35
Fixed-rate loans	20,359	2.73	19,007	2.21
	3,195,417		**2,779,730**	

Financial liabilities to equity-accounted companies total EUR 29,978 thousand (2024: EUR 20,375 thousand).

30. Lease liabilities

Lease liabilities total EUR 646,983 thousand (2024: EUR 794,162 thousand), divided into non-current liabilities of EUR 423,018 thousand (2024: EUR 507,922 thousand) and current liabilities of EUR 223,965 thousand (2024: EUR 286,240 thousand).

The following amounts are recognized in connection with leases:

(EUR thousand)	2025	2024
Interest expense on the lease liability	36,574	36,915
Short-term lease expense	273,141	288,032
Low-value lease expense	19,046	11,814
Variable lease expense not included in lease liability	78,146	64,492
Lease remeasurement expense	–	61
Other lease expense	19,595	23,290
Other lease income	631	2,337

Total cash outflows from leases amount to EUR 689,311 thousand (2024: EUR 639,978 thousand).

Certain leases contain extension options by the Group up to one year before the end of the non-cancellable contract period. Where practicable, the Group seeks to include extension options in new leases to provide operational flexibility. The extension options held are exercisable only by the Group and not by the lessors. The Group assesses at lease commencement whether it is reasonably certain to exercise the extension options, and where it is reasonably certain, the extension period has been included in the lease liability. The Group reassesses whether it is reasonably certain to exercise the options if there is a significant event or significant change in circumstances within its control.

Certain lease contracts may include an option to buy out the asset at the end of the lease term or include contingent rental guarantees where the Group could be exposed to the variability of returns in relation to return conditions at lease expiry. The Group will include the payments for the contingent rental guarantee or the buyout option only if it is reasonably certain that the payment will occur at the end of the lease term. The Group reassesses

whether it is reasonably certain to exercise the options if there is a significant event or significant change in circumstances within its control.

CIMIC is party to several lease agreements with some unconsolidated companies during the reporting period. These transactions were undertaken to develop operational and financing synergies across the CIMIC Group. The companies concerned are financed by external parties and the Group does not hold any equity interests or assets such as loans or receivables with these entities. The relevant activities are directed by contractual agreements. The entities are controlled by external parties and therefore are not consolidated. The Group is only exposed to the variability of returns in relation to return conditions at lease expiry, which are not known at this time. The Group's exposure to lease liabilities due to unconsolidated companies amounts to EUR 338.4 million (2024: EUR 262.9 million).

The maturity analysis of lease liabilities is shown in Note 34.

31. Trade payables and other liabilities

(EUR thousand)	**Dec. 31, 2025**	Dec. 31, 2024
Trade payables	9,675,687	8,942,065
Contract liabilities	1,421,818	1,617,752
Other liabilities	608,338	502,525
	11,705,843	**11,062,342**

Trade payables consist of non-current liabilities in the amount of EUR 155,363 thousand (2024: EUR 234,758 thousand) and current liabilities in the amount of EUR 9,520,324 thousand (2024: EUR 8,707,307 thousand).

Trade payables include payables to equity-accounted companies in the amount of EUR 136,817 thousand (2024: EUR 1,097 thousand).

The EUR 1,421,818 thousand (2024: EUR 1,617,752 thousand) contract liabilities represent construction contracts with a net negative balance in favor of customers where progress payments received exceed incurred contract costs including a pro rata allocation of contract net profit.

Other liabilities are made up as follows:

	Dec. 31, 2025		Dec. 31, 2024	
(EUR thousand)	Non-current	Current	Non-current	Current
Liabilities to employees	–	91,478	–	73,020
Tax liabilities (excluding income taxes)	–	66,667	–	59,271
Liabilities from the purchase of financial assets	30,856	22,320	83,537	6,078
Liabilities under derivative financial instruments	30,033	11,061	36,026	29,025
Deferred income	6,263	7,244	63,537	4,029
Social insurance liabilities	–	5,559	–	2,631
Sundry other liabilities	1,499	335,358	85	145,286
	68,651	**539,687**	**183,185**	**319,340**

32. Current income tax liabilities

The EUR 268,330 thousand (2024: EUR 142,780 thousand) in current income tax liabilities comprise amounts payable to domestic and foreign tax authorities. EUR 186,038 thousand of this amount relate to prior periods (2024: EUR 111,327 thousand).

Other disclosures

33. Basic and diluted earnings per share

Basic earnings per share are calculated by dividing the Group share of profit after tax attributable to the shares by the average number of shares in circulation. This indicator can become diluted as a result of potential shares (mainly stock options and convertible bonds). HOCHTIEF's share-based payment arrangements do not have any dilutive effect. Diluted and basic earnings per share are consequently identical.

	2025	2024
Profit after tax—attributable to HOCHTIEF shareholders (EUR thousand)	**902,333**	**775,625**
Number of shares in circulation in thousands (weighted average)	75,238	75,225
Earnings per share—attributable to HOCHTIEF shareholders (EUR)	**11.99**	**10.31**
Dividend per share (EUR)	–	5.23
Proposed dividend per share (EUR)	6.60	–

34. Reporting on financial instruments

Financial instruments include financial assets and liabilities as well as contractual claims and obligations relating to exchanges and transfers of financial assets. Financial instruments can be derivative or non-derivative.

Non-derivative financial assets mostly comprise cash and cash equivalents, marketable securities, receivables, and other financial assets. Non-derivative financial liabilities are mainly current liabilities measured at amortized cost.

According to their fair value, derivative financial instruments are reported either in other receivables and other assets or in other liabilities.

Holdings of non-derivative and derivative financial instruments are carried on the balance sheet. The following sections provide information on the management of liquidity risk, currency risk, interest rate risk, other price risk and credit risk as well as additional disclosure on financial instruments.

Financial Risk management strategy

All finance activities in the HOCHTIEF Group are conducted on the basis of a Group-wide financial directive. This is fleshed out by function-specific operating work instructions on issues such as currency and collateral management. These lay down the risk management strategy and the principles for dealing with the various classes of financial risk.

The primary objective of financial risk management is to safeguard Group liquidity at all times. For the HOCHTIEF Group, liquidity not only means solvency in the strict sense, but also the long-term availability of the financial head-room needed for the basic operating business (such as collateral management/bank guarantees). Safeguarding liquidity at all times therefore requires integrated management of all Group financial resources, including its credit standing and hence borrowing capacity.

A further objective is to minimize financial risks affecting the value and profitability of the HOCHTIEF Group (currency, interest rate, exchange rate, and commodity price risks of all kinds, as well as counterparty risks).

The HOCHTIEF Group's operating business gives rise to new or changing financial risk exposures all the time. Risk minimization therefore does not mean excluding all financial risk, but substantially reducing, within specified bounds, financial risk exposures quantifiable at any time. This serves to ensure rapid response and adaptation capability in the event of unforeseen situations.

Management of liquidity risk

HOCHTIEF uses largely centralized liquidity structures—notably cash pooling—to pool liquidity at Group level. The central liquidity position is calculated daily and budgeted monthly in a bottom-up process over a rolling 18-month period. Liquidity budgets are supplemented with monthly stress testing. HOCHTIEF uses liquidity budgets in active management of its cash and the loans portfolios.

The tables below show maximum payments. The tables show the worst-case scenario for HOCHTIEF, i.e. the earliest possible contractual payment date in each case. Creditors' rights of termination are taken into account. Foreign currency items are translated using the closing rate as of the balance sheet date. Interest payments on variable-rate items are translated uniformly using the last interest rate fixed prior to the balance sheet date. Both derivative and non-derivative financial instruments (for example, forward exchange contracts and interest rate swaps) are taken into account. Credit facilities granted but not yet drawn in their full amount are also included, as are financial guarantees issued by the Group. No separate disclosure is made for financial instruments whose carrying amount best reflects the maximum default risk.

The maximum payments shown in the following tables (worst-case scenario) are offset by contractually fixed receipts in the same periods that are not shown here (for example, from trade receivables).

Maximum payments as of December 31, 2025

(EUR thousand)	2026	2027	2028–2029	after 2029	**Total**

	9,912,658	**1,436,061**	**2,937,563**	**3,773,668**	**18,059,950**

In addition, Group liquidity is secured with cash in hand and on deposit, marketable securities holdings, undrawn revolving credit facilities, and the possibility of issues under the Commercial Paper Program. The following table shows the main liquidity instruments:

(EUR thousand)	**Dec. 31, 2025**	Dec. 31, 2024
Cash in hand and on deposit	5,887,445	5,382,537
Marketable securities	917,591	866,952
Undrawn revolving credit facilities (nominal)	2,995,664	3,661,555
	9,800,700	**9,911,044**
Undrawn guarantee facilities	2,729,466	1,710,954

No refinancing risk is currently seen with regard to the long-term guarantee and credit facilities in light of the broad international syndication of existing borrowing in each instance, the long-term maturity profile, and the diverse alternatives for refinancing. The authorized capital I in the amount of up to EUR 65,752 thousand, the authorized capital II in the amount of up to EUR 33,718 thousand, and the conditional capital in the amount of up to EUR 51,200 thousand provide appropriate scope for raising additional capital as needed.

Financial assets and financial liabilities are presented net in the balance sheet when there is a legally enforceable right to set off the recognized amounts. There must also be an intention either to settle on a net basis, or to realize the assets and settle the liabilities simultaneously. Due to a legally binding arrangement with banks, CIMIC reports financial assets in the amount of EUR 55,561 thousand (2024: EUR 342,580 thousand) and financial liabilities in the amount of EUR 25,963 thousand (2024: EUR 19,849 thousand) netted in the balance sheet with their remaining net amount of EUR 29,598 thousand (2024: EUR 322,731 thousand).

The Group companies enter into factoring agreements with banks and financial institutions. These agreements only relate to certified receivables, on a non-recourse basis, acknowledged by the client with payment only being subject to the passage of time. Under the factoring agreements:

- The certified receivables are derecognized when substantially all the risks and rewards of ownership have been transferred;
- The cash flow to the Group only arises when there is an amount certified by the client and contractually due to be paid to the Group; there are no disputes on the amounts due and the customer has acknowledged this by way of certification; and
- The receipt by the Group irrevocably removes the Group's right to the certified receivable due from the customers.

The factoring of these receivables is therefore done on a non-recourse basis. The level of non-recourse factoring across the Group was EUR 847.1 million as of December 31, 2025 (2024: EUR 1,205.4 million).

The Group enters into supply chain finance arrangements with financial institutions for suppliers which may elect to receive early payment for goods and services to improve their liquidity. The supply chain finance program is offered on a voluntary basis and suppliers can opt in and opt out at their discretion at any point in time. The terms of the arrangements are:

- The creditor arises from operational expenses relating to the supply of goods and services;
- They mirror normal credit terms;
- There are no additional credit enhancements; and:

- They are subject to the same obligations that are customary within the industry, such as warranty for defective work.

Accordingly, the terms of the arrangement do not modify the original liability, and therefore the amounts continue to be classified within trade and other payables. The average maturity date of the financial liabilities shown that come under the arrangement is 30 days after the date of invoice and also corresponds to the average maturity date of trade payables that do not come under a supplier finance arrangement. The level of supply chain finance across the Group was EUR 39.7 million as of December 31, 2025 (2024: EUR 46.7 million).

Management of currency risk

HOCHTIEF is exposed to currency risk (transaction risk) arising from receivables, liabilities, cash and cash equivalents, marketable securities, and pending transactions in currencies other than the functional currency of the Group company concerned in each instance. Currency derivatives, i.e. forward exchange contracts and cross-currency swaps, are used to hedge against fluctuations in these payments or items caused by exchange rates. The prospective effectiveness between the hedged item and the hedging instrument has been confirmed for all hedging relationships using the critical terms match method. HOCHTIEF normally hedges all currency risk from foreign currency transactions.

Hedges for Group companies—with the exception of hedges in the CIMIC Group—are mainly administered via HOCHTIEF Aktiengesellschaft. A binding guideline clarifies their use as well as separate controls and responsibilities for all Group companies. Currency derivatives are normally only used to hedge risk. Any form of speculation is ruled out under a binding, Group-wide financial directive. As a matter of policy, the counterparties for derivatives entered into externally are banks with a top credit rating.

The following table shows the fair values and nominal values of currency derivatives, changes in their fair values, and their maximum remaining maturities:

(EUR thousand)	**Dec. 31, 2025**	Dec. 31, 2024
Assets		
Forward exchange contracts/cross-currency swaps		
for hedging purposes (cash flow hedge accounting)	65,558	43,016
for hedging purposes (no cash flow hedge accounting)	58	4,699
	65,616	**47,715**
Liabilities and shareholders' equity		
Forward exchange contracts/cross-currency swaps		
for hedging purposes (cash flow hedge accounting)	21,918	43,518
for hedging purposes (no cash flow hedge accounting)	10,963	4,716
	32,881	**48,234**
Changes in fair value		
Derivatives held for hedging purposes (cash flow hedge accounting)	(1,464)	(15,698)
Derivatives held for hedging purposes (no cash flow hedge accounting)	(11,306)	4,328
Nominal amounts		
Forward exchange contracts/cross-currency swaps		
for hedging purposes (cash flow hedge accounting)	952,213	1,244,893
for hedging purposes (no cash flow hedge accounting)	279,748	462,916
Maximum remaining maturity		
(months)		
for hedging purposes (cash flow hedge accounting)	81	60
for hedging purposes (no cash flow hedge accounting)	59	22

Where hedge accounting is used, unrealized gains and losses on hedges are initially recognized in other comprehensive income, taking into account deferred taxes. Gains and losses are not realized until a hedged item affects income. Derivatives are measured on the basis of current market rates as of the balance sheet date. When interpreting positive or negative fair value changes relating to derivatives, it is important to remember that they balance hedged items whose values move in the opposite direction.

The average hedging rates for forward exchange contracts are EUR/USD 1.1390.

In the case of cross-currency interest rate swaps, the cross-currency basis spreads that are part of the hedging instrument are not included in the hedge and HOCHTIEF Aktiengesellschaft accounts for the cost of hedging in other comprehensive income.

The table below shows the reconciliation of the cost of hedging and the reconciliation of the associated cash flow hedge reserve components. The cost of hedging mainly include the non-designated cross-currency basis spreads that are part of the cross-currency interest rate swaps.

(EUR thousand)	Jan. 1, 2025	Hedging gain or loss	Reclassified	Reclassified to inventories (basis adjustment)	**Dec. 31, 2025**
Cash flow hedge reserve	15,649	(7,899)	19,588	–	27,338
Cost of hedging	578	2,200	–	–	2,778

The following sensitivity analyses demonstrate what material impact on HOCHTIEF Group equity and profit or loss would result from a 10% fluctuation in foreign currencies relative to each Group company's functional currency (EUR, AUD, USD). The analysis is based on the risk exposure as of the balance sheet date. Changes in equity are due to market value fluctuations of currency derivatives used for hedging (cash flow hedge accounting). Changes in profit or loss are due to unhedged currency exposures in financial monetary assets and liabilities and to market value fluctuations in derivative financial instruments (no cash flow hedge accounting). The Group's exposure to foreign currency changes for all other currencies is not material.

Management of interest rate risk

HOCHTIEF is exposed to interest rate risk through financial items primarily consisting of interest-bearing marketable securities on the assets side and financial liabilities on the liabilities side of the balance sheet. Two approaches are used to minimize this risk. Firstly, the Company uses natural hedging, meaning that it eliminates contrary interest rate risk from non-derivative financial instruments on the assets and liabilities sides. The second method is to use interest rate derivatives. These generally take the form of interest rate swaps used in accordance with the Group annual financing strategy to manage cash flow risk from changes in interest rates for variable-rate financial items. The prospective effectiveness between the hedged item and the hedging instrument has been confirmed for all hedging relationships using the critical terms match method. As with currency derivatives, hedges for Group companies—with the exception of hedges in the CIMIC Group—are mainly administered via HOCHTIEF Aktiengesellschaft. There are also parallel regulations and a guideline, and derivatives are used solely for hedging (i.e. not speculatively) as a matter of principle. Counterparties for derivatives entered into externally are generally banks with a top credit rating.

The following table shows the fair values and nominal values of interest rate derivatives, changes in their fair values, and their maximum remaining maturities:

(EUR thousand)	**Dec. 31, 2025**	Dec. 31, 2024
Assets		
Interest rate futures/Interest rate swaps		
for hedging purposes (cash flow hedge accounting)	4,270	–
for hedging purposes (no cash flow hedge accounting)	46	164
	4,316	**164**
Liabilities and shareholders' equity		
Interest rate futures/Interest rate swaps		
for hedging purposes (cash flow hedge accounting)	8,184	16,743
for hedging purposes (no cash flow hedge accounting)	29	74
	8,213	**16,817**
Changes in fair value		
Derivatives held for hedging purposes (cash flow hedge accounting)	8,729	(4,441)
Derivatives held for hedging purposes (no cash flow hedge accounting)	(140)	(202)
Nominal amounts		
Interest rate futures/Interest rate swaps		
for hedging purposes (cash flow hedge accounting)	1,210,696	843,861
for hedging purposes (no cash flow hedge accounting)	23,295	31,484
Maximum remaining maturity		
(months)		
for hedging purposes (cash flow hedge accounting)	58	58
for hedging purposes (no cash flow hedge accounting)	4	4

The following sensitivity analyses demonstrate the impact that a one percentage point change in the respective market interest rate would have had on equity and profit. The analysis is based on the risk exposure as of the balance sheet date. Changes in equity are due to market value fluctuations of interest rate derivatives used for hedging (cash flow hedge accounting) and of fixed-interest securities measured at fair value through other comprehensive income. Changes in profit or loss are due to unhedged variable rate interest rate exposures on primary financial instruments and to market value fluctuations in derivative financial instruments (no cash flow hedge accounting).

	Dec. 31, 2025			Dec. 31, 2024		
	Market interest rate		Risk exposure	Market interest rate		Risk exposure
(EUR thousand)	1% increase	1% decrease		1% increase	1% decrease	
Effect on equity	64,964	(65,354)	1,197,779	49,960	(49,674)	1,586,414
Effect on profit or loss	(20,803)	20,918	2,301,729	(23,297)	23,314	2,656,949

Management of other price risk

At HOCHTIEF, other price risk results from investing in equity instruments that are measured at fair value through profit or loss or other comprehensive income. This includes marketable securities and other financial assets (mainly investments). Such items are shown in the following table.

(EUR thousand)	**Dec. 31, 2025**	Dec. 31, 2024
Price risk exposure on non-current assets	276,931	137,252
Price risk exposure on current assets	236,040	206,403

The following sensitivity analyses demonstrate the impact on HOCHTIEF Group equity and profit that would result from a 10% fluctuation in the market value of equity instruments. The analysis is based on holdings as of the balance sheet date. Changes in equity are due to market value fluctuations of marketable securities and other financial assets measured at fair value through other comprehensive income. Changes in profit or loss are due to market value fluctuations in marketable securities and other financial assets measured at fair value through profit or loss.

	Dec. 31, 2025 Market value		Dec. 31, 2024 Market value	
(EUR thousand)	10% increase	10% decrease	10% increase	10% decrease
Effect on equity				
Changes in the market price of securities	20,199	(20,199)	20,264	(20,264)
Changes in the value of other financial assets	19,280	(19,280)	3,787	(3,787)
Effect on profit or loss				
Changes in the market price of securities	3,405	(3,405)	377	(377)
Changes in the value of other financial assets	4,000	(4,000)	4,951	(4,951)

Management of credit risk

The HOCHTIEF Group is exposed to credit risk from operations and from certain financing activities.

HOCHTIEF performs risk management for operations by continuously monitoring trade receivables at divisional level. For trade receivables, using the simplified approach, expected credit losses (ECL) can be determined in accordance with IFRS 9 on the basis of loss rates calculated from historical and projected data, taking into account the client and the regional economic environment. HOCHTIEF considers the following as constituting an event of default for internal credit risk management purposes as historical experience indicates that receivables that meet either of the following criteria are generally not recoverable:

- if there is a material breach of financial covenants by the counterparty and this is not expected to be remedied in the foreseeable future; or

- information developed internally or obtained from external sources indicates that the debtor is unlikely to pay its creditors, including the HOCHTIEF Group, in full (without taking into account any collaterals held by HOCHTIEF). Irrespective of the above analysis, HOCHTIEF considers that default has occurred when a financial asset is significantly past due unless the HOCHTIEF Group has reasonable and supportable information to demonstrate that a more lagging default criterion is more appropriate.

The HOCHTIEF Group has given third parties financial guarantees and loan commitments in respect of Group companies. Financial guarantees and loan guarantees are only given in respect of companies with top credit standing, minimizing the probability of the guarantees being drawn upon.

The maximum credit risk exposure of financial assets is equivalent to their carrying amounts in the balance sheet. However, the actual credit risk exposure is lower due to collateral given in favour of the HOCHTIEF Group. The maximum risk exposure on financial guarantees issued by HOCHTIEF is the maximum amount to be paid by HOCHTIEF. The maximum credit risk for loan commitments is the amount of the commitment. As of December 31, 2025, the maximum credit risk from financial guarantees and loan commitments amounted to EUR 69,640 thousand (2024: EUR 41,830 thousand). No recourse has ever been made to these guarantees provided by HOCHTIEF and, in light of the financial circumstances, none is currently anticipated for the future.

HOCHTIEF accepts collateral to secure contract performance by subcontractors, subcontractors' warranty obligations, and claims to remuneration. Such collateral includes guarantees relating to warranty obligations, contract performance, advance payments, and receivables. Acceptance of collateral is governed by a HOCHTIEF work instruction. Among other aspects, this covers the contractual drafting, implementation, and management of all agreements. The detailed rules vary according to factors such as the country jurisdiction and applicable case law. In the case of credit risk, HOCHTIEF examines the credit rating of the party providing the collateral for all guarantees accepted. HOCHTIEF uses external specialists (such as rating agencies) to assess credit standings where possible. The fair values of accepted collateral are not disclosed as they generally cannot be measured reliably.

HOCHTIEF recognizes loss allowance for expected credit losses for financial assets measured at amortized cost or at fair value through other comprehensive income, as well as for contract assets, lease receivables, loan commitments, and financial guarantees. This does not apply to equity instruments or financial assets measured at fair value through profit or loss.

HOCHTIEF determines credit risk for financial assets on the basis of the expected credit losses, applying a three-stage model to present the loss allowance. For financial instruments which are new or whose credit risk has not increased significantly since initial recognition, a loss allowance is recognized in profit or loss in the amount of the 12-month expected credit losses (Stage 1). In the case of financial instruments whose credit risk has increased significantly since initial recognition, a loss allowance corresponding to the lifetime expected credit losses is recognized through profit or loss (Stage 2). If, in addition, there is objective evidence that a financial asset is impaired in value, a loss allowance is recognized in the amount of the lifetime expected credit losses

(Stage 3). In contrast to measurement at Stage 1 and 2, the effective interest is then calculated on the basis of the net carrying amount (the gross carrying amount less recognized impairments).

Expected credit losses for trade receivables and contract assets are determined using the simplified approach based on an impairment matrix. In this instance, loss allowances are recognized in profit or loss in the amount of the lifetime expected credit losses, in accordance with Stage 2 of the general model, both on initial recognition and at each reporting date. If there are objective indications of impairment, the general requirements for transfer to the next higher stage, Stage 3, apply.

The following tables show the gross and net carrying amounts as well as the accumulated impairment amount for trade receivables, including contract assets. This does not include trade receivables measured at fair value though profit or loss in the amount of EUR 136,487 thousand (2024: EUR 152,612 thousand).

Dec. 31, 2025

						Impairment matrix			
(EUR thousand)	Net carrying amount	Cumulative depreciation	Gross carrying amount	Impairment matrix not applied	Not past due	Up to 30 days past due	31 to 60 days past due	61 to 90 days past due	Over 90 days past due
Trade receivables	7,187,152	(557,366)	7,744,518	1,647,381	5,594,094	262,244	31,199	12,992	196,608
	7,187,152	**(557,366)**	**7,744,518**	**1,647,381**	**5,594,094**	**262,244**	**31,199**	**12,992**	**196,608**

Dec. 31, 2024

						Impairment matrix			
(EUR thousand)	Net carrying amount	Cumulative depreciation	Gross carrying amount	Impairment matrix not applied	Not past due	Up to 30 days past due	31 to 60 days past due	61 to 90 days past due	Over 90 days past due
Trade receivables	6,723,271	(515,527)	7,238,798	1,366,449	5,416,690	224,729	63,521	15,376	152,033
	6,723,271	**(515,527)**	**7,238,798**	**1,366,449**	**5,416,690**	**224,729**	**63,521**	**15,376**	**152,033**

The aging profile of trade receivables that are past due is shaped by industry-specific factors. Receipt of payment depends on acceptance (inspection) and invoice checking, which can often take a relatively long time, especially for large-scale projects. The trade receivables that are past due are from public-sector clients and industrial companies with top credit ratings are mostly subject to low credit risk.

The opening balance of impairments on trade receivables and contract assets at the beginning of the reporting period was EUR 515,527 thousand. Changes within the 2025 reporting period relate to additions, reversals, utilizations, exchange rate adjustments, and consolidation changes, and come to a total of EUR 41,839 thousand (2024: EUR 224,898 thousand), as a result of which impairments amounted to EUR 557,366 thousand as of December 31, 2025. In percentage terms, the loss rate on the gross carrying amount of trade receivables and contract assets is 7.2% (2024: 7.12%). These are mostly impairments typical for the industry.

The following tables show, for 2025 and 2024, changes in the expected credit losses on the remaining financial assets that come under the general impairment model in accordance with IFRS 9:

Capital risk management

The HOCHTIEF Group manages capital with the aim of ensuring that all Group companies can continue to operate as a going concern. Furthermore, the HOCHTIEF Group's strategic financial targets are geared to continuously increasing corporate value and maintaining sufficient liquidity reserves. The Group keeps the cost of capital as low as possible by optimizing the balance between equity and debt. These measures primarily serve to secure the best possible credit standing as well as to maximize shareholder returns. Medium-term liquidity planning at corporate units ensures that all operating businesses have sufficient liquidity at all times.

The Group's capital structure consists of the balance sheet items comprising net debt (defined as current and non-current liabilities less cash and cash equivalents) and equity. A notable aim in capital management is to maintain the HOCHTIEF Group's investment-grade rating for ongoing access to the debt capital market and to optimize the cost of capital. To meet these goals, the impact of material capital transactions and business activities is assessed in advance to check conformity with the quantitative capital requirements of rating agency S&P. HOCHTIEF's "BBB-, outlook stable" rating meets this objective as of the reporting date. The overall capital risk management strategy did not change in the reporting year compared with the prior year.

Additional information on financial instruments

In the following, carrying amounts and fair values are shown for each class of financial instrument and carrying amounts for each IFRS 9 category as of December 31, 2025 and as of December 31, 2024.

*In accordance with IFRS 13 allocated to fair value hierarchy level 2

As current financial instruments have short remaining maturities and are measured at market value, their carrying amounts generally correspond to market value as of the balance sheet date. Marketable securities are measured at fair value. Where insufficient recent information is available for fair value measurement of shares in non-consolidated subsidiaries and other participating interests, the historical cost may be considered the best estimate of fair value.

In the disclosures on the fair value hierarchy for financial instruments measured at fair value as set out below, fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date under current market conditions (i.e., the exit price). For non-financial assets, fair value is measured assuming the highest and best use of the asset by market participants. The following three-level hierarchy is applied that reflects the observability of the inputs to valuation techniques used to measure fair value.

Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities; e.g. quoted securities.

Level 2: Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (i.e., as prices) or indirectly (i.e., derived from prices); e.g. interest rate swaps and forward exchange contracts.

Level 3: No relevant observable inputs available, hence unobservable inputs are determined as an exit price from the perspective of a market participant that holds the asset or owes the liability; e.g. investments measured at fair value determined by business valuation.

Disclosures relating to the fair value hierarchy for financial instruments measured at fair value

	Dec. 31, 2025			Dec. 31, 2024		
(EUR thousand)	Level 1	Level 2	Level 3	Level 1	Level 2	Level 3

Other liabilities						
Non-current	–	30,033	–	–	36,026	–
Current	29	11,032	–	74	28,951	–

There were no transfers of assets measured at fair value between Level 1 and Level 2 of the fair value hierarchy in the course of the reporting year. There were likewise no changes in Level 3 compared to the previous year.

The other financial assets in Level 1 mainly include the 15.31% investment in Vulcan Energy.

The financial receivables and other assets as well as the other liabilities include the Group's forward exchange contracts, which are not traded in active markets. The fair values of these contracts are estimated using a valuation technique that maximizes the use of observable market inputs, e.g. market exchange and interest rates. They are therefore included in Level 2 of the fair value hierarchy.

In Level 3, the fair value of investments in unlisted entities is measured using generally recognized valuation techniques based on discounted cash flow analysis. The unobservable inputs used for this purpose are an internal rate of return of 9%, growth rates of between 2.5% and 3.0%, and required discount rates of between 8% and 15%. There were no significant interdependencies between the unobservable input parameters that materially affect the fair values. Changes in those input parameters had no material effect on total comprehensive income, total assets and liabilities, or equity.

Put option and Thiess option

Elliott holds an option to sell all or part of its interest in ordinary shares or Class A Preference Shares in Thiess to CIMIC ("Put option"). The terms of the April 23, 2024 transaction mean that the Put option is now exercisable by Elliott from April 22, 2025 to December 31, 2026. The exercise price will be the lower of a cost price or a price referable to movements in the S&P/ASX 200 Total Return index plus the accrued value of any shortfall in agreed minimum distributions.

As part of the Group's investment in the Thiess Class C Preference Shares, Elliott and CIMIC entered into an option deed ("Thiess option") which includes an option for Elliott to put their Class C Preference Shares to CIMIC for a period of 42 months, starting six months after the end of the Put option period, or, six months after the date when Elliott ceases to own Class A Preference Shares or ordinary shares or notices the exercise of options related to all remaining Class A Preference Shares or ordinary shares. CIMIC holds a call option to acquire the Class C Preference Shares from Elliott, for a period of 42 months, starting at the end of the Put option period or the date when Elliott ceases to own any Class A Preference Shares or ordinary shares.

In the previous year before the transaction, the Put and Thiess option were recognized as derivative financial instruments in accordance with IFRS 9 at fair value under current other liabilities (Level 3 of the fair value hierarchy). As a consequence of the April 23, 2024 transaction and the required consolidation of Thiess, the Put option and Thiess option are required to be recognized as an option over non-controlling interest (Put options granted to non-controlling interest shareholders) and the present value of the gross redemption value is recognized as a financial liability alongside a reduction in equity within reserves. The liability is presented separately in the consolidated balance sheet.

Accordingly, amounts of EUR 522.7 million (2024: EUR 550.0 million), attributable to ordinary shares and Class A Preference Shares, and EUR 86.9 million (2024: EUR 91.5 million), attributable to Class C Preference Shares, have been recognized in the consolidated balance sheet without adjustment for the probability of the assets being put. The total amount is EUR 609.6 million (2024: EUR 641.5 million).

Reconciliation of beginning to ending balances for Level 3 measurements of financial instrument fair values

(EUR thousand)	Balance as of Jan. 1, 2025	Currency adjustments	Gains/(losses) recognized in profit or loss	Other changes	**Balance as of Dec. 31, 2025**
Assets

Other liabilities					
Current	–	–	–	–	–

(EUR thousand)	Balance as of Jan. 1, 2024	Currency adjustments	Gains/(losses) recognized in profit or loss	Other changes	Balance as of Dec. 31, 2024
Assets					
Other financial assets	178,905	(3,155)	(16,083)	(120,425)	39,242
Liabilities					
Other liabilities					
Current	996	(9)	–	(987)	–

The currency adjustments are accounted for in other comprehensive income.

Marketable securities as well as cash and cash equivalents with a carrying amount of EUR 268,080 thousand are pledged as collateral for recognized financial liabilities and unrecognized contingent liabilities as of December 31, 2025 (2024: EUR 282,056 thousand).

The following table shows the net profit from financial instruments by IFRS 9 category for 2025 and 2024:

Net profit from financial instruments

(EUR thousand)	**2025**	2024
At amortized cost	162,792	132,163
At fair value through profit or loss	(4,563)	7,290
At fair value through other comprehensive income: Debt instruments	27,258	10,849
At fair value through other comprehensive income: Equity instruments	2,492	2,570
Liabilities at amortized cost	(465,251)	(421,449)
	(277,272)	**(268,577)**

The calculation of net profit from financial instruments includes interest income and expenses, impairments and impairment reversals, income and expenses from currency translation, dividend income, gains and losses on disposal, and other changes in the fair value of financial instruments recognized in profit or loss or other comprehensive income.

35. Contingencies, commitments, and other financial obligations

At HOCHTIEF Aktiengesellschaft, as in the prior year, there are no contingent liabilities that need to be disclosed.

Material guarantee facilities

	Total available		Utilized		Expires
(EUR billion)	**2025**	2024	**2025**	2024

CIMIC (incl. Thiess)					
Syndicated guarantee facility (AUD)	1.33	1.33	1.12	1.18	Nov. 6, 2026
Further guarantee facilities (AUD)	6.02	5.88	4.15	5.14	n/a

The syndicated U.S. Surety Bonding Line used by both Turner and the former Flatiron Group for their operating activities was further increased in the fiscal year due to the rise in orders by Turner and the related need for greater bonding capacity. The amount outstanding as of the reporting date was approximately EUR 13.4 billion (approximately USD 15.8 billion). In the course of the Flatiron-Dragados transaction at the beginning of 2025, the bonding contracts were restructured so that the line for Flatiron projects will gradually be phased out in line with the progress of the projects.

In November 2023, CIMIC signed an AUD 1.3 billion (EUR 0.8 billion) three-year syndicated performance bond facility. This replaced an AUD 1.4 billion (EUR 0.85 billion) facility that expired in March 2024 and covers the CIMIC Group's operational bonding requirements in addition to the existing bilateral guarantee and bonding facilities.

Group order exposure from awarded capital expenditure projects is EUR 46,557 thousand (2024: EUR 41,510 thousand) and mostly relates to the CIMIC Group in the amount of EUR 46,364 thousand (2024: EUR 41,074 thousand).

Legal disputes

HOCHTIEF Group companies are involved in various legal disputes and arbitration proceedings in the context of their operating activities. As currently assessed, HOCHTIEF does not anticipate that the disputes and arbitration proceedings will have any material adverse impact on the Group's business and financial situation.

36. Segment reporting

Activities are allocated to segments for the purposes of segment reporting. The segmentation corresponds to the internal management of the operating business and the internal reporting of the HOCHTIEF Group.

The Group's reportable segments are as follows:

Turner is a leading U.S. general building company providing a full range of services for projects of all types and sizes in North America and around the world, successfully pursuing opportunities in advanced-technology growth markets such as data centers.

CIMIC is an Australian company that pools its construction, services, natural resources and PPP activities in the Asia-Pacific region and, for instance, includes the investment in Thiess, which since May 2024 has been accounted for as a subsidiary in the Consolidated Financial Statements.

Engineering and Construction bundles the construction and PPP activities in Europe together with FlatironDragados, the North American civil engineering company which is included in the HOCHTIEF Consolidated Financial Statements at equity in 2025.

Abertis comprises the investment in the Spanish toll road operator Abertis Infraestructuras, and is equity-accounted in HOCHTIEF's Consolidated Financial Statements.

Corporate comprises Corporate Headquarters, other activities not assignable to the separately presented segments—such as management of financial resources, risk management and insurance activities—, plus consolidation effects. Insurance activities are managed from Corporate Headquarters under the responsibility of HOCHTIEF Insurance Broking and Risk Management Solutions GmbH, Essen, Germany, with companies in Luxembourg, including Stonefort Reinsurance S.A. The HOCHTIEF insurance companies primarily provide reinsurance offerings for contractors' casualty and surety, subcontractor default, liability, and occupational accident insurance.

Explanatory notes to the segmental data

Intersegment sales represent revenue generated between divisions. They are transacted on an arm's length basis. External sales mainly comprise revenue from performance obligations recognized under the percentage of completion method in the mainstream construction business, construction management, and resource services. The sum of external sales and intersegment sales adds up to total sales revenue for each division.

Work done includes work done for fully consolidated companies plus the proportional share of work done in joint ventures.

EBIT/EBITDA adjusted is derived from profit before tax as follows:

(EUR thousand)	2025	2024
Profit before tax	**1,409,763**	**1,003,848**
+ Investment and interest expenses	508,139	471,551
– Investment and interest income	(211,164)	(206,817)
– Result from long term loans to participating interests	(4,304)	(8,431)
EBIT	**1,702,434**	**1,260,151**
+ Depreciation and amortization	670,427	594,415
EBITDA	**2,372,861**	**1,854,566**
Adjustments		
– Foreign exchange gains	(30,554)	(12,566)
+ Currency losses	25,214	38,791
– Income from disposal/write-ups of intangible assets, property, plant and equipment, and investment properties	(17,057)	(13,654)
+ Losses from disposal of non-current assets (excluding financial assets)	290	2,045
– Income from derecognition of/reversals of impairments on receivables	(302)	(3,802)
+ Impairment losses and losses on disposal of current assets (except inventories)	2,123	2,805
+ Adjustment for non-operating net expenses	(137,841)	13,329
EBITDA adjusted	**2,214,734**	**1,881,514**
– Depreciation and amortization	(670,427)	(594,415)
EBIT adjusted	**1,544,307**	**1,287,099**

The adjustment for non-operating net expenses in 2025 includes mainly the one-off gain of EUR 145,914 thousand from the transfer of Flatiron to the new combined company FlatironDragados

Depreciation and amortization relates to intangible assets with finite useful lives, property, plant and equipment (including right-of-use assets), and investment properties.

The share of profits and losses of equity-method associates and joint ventures comprises income and expenses, including impairment losses and impairment reversals, relating to equity-method investments.

The non-cash expenses consist of additions to provisions.

Purchases comprise additions to intangible assets, property, plant and equipment, investment properties, equity-method investments (excluding equity-method adjustments), subsidiaries, and other participating interests.

Net cash is made up as follows:

(EUR thousand)	Dec. 31, 2025	Dec. 31, 2024
Cash and cash equivalents	6,226,042	5,720,598
Marketable securities	847,074	810,947
Current financial receivables	132,394	53,901
Current other receivables	280,154[1]	59,432
Financial assets included in net cash	**7,485,664**	**6,644,878**
Bonds or notes issued	3,406,607	3,733,792

Promissory note loans	950,834	894,739
Financial liabilities to participating interests	29,978	20,375
Sundry other financial liabilities	153	291
Financial liabilities included in net cash	**7,582,989**	**7,428,927**
Net cash	**(97,325)**	**(784,049)**
Net cash Flatiron*	–	664,142
Total net cash	**(97,325)**	**(119,907)**

* included in assets/liabilities held for sale
[1] The item also includes a receivable from Sojitz from the sale of UGL Transport in the amount of EUR 159.9 million.

Non-current assets comprise intangible assets, property, plant and equipment, and investment properties.

37. Notes to the Consolidated Statement of Cash Flows

The Consolidated Statement of Cash Flows classifies cash flows into operating, investing, and financing activities. Exchange rate effects are eliminated and their influence on the cash position is disclosed separately. Changes in cash and cash equivalents due to acquisitions and disposals of consolidated companies are shown separately under cash flow from investing activities. The negative EUR 569,139 thousand (2024: EUR 51,058 thousand) changes in cash and cash equivalents due to consolidation changes comprised EUR 79,988 thousand (2024: EUR 69,728 thousand) in cash and cash equivalents from acquisitions and EUR 649,127 thousand (2024: EUR 18,670 thousand) in cash and cash equivalents in disposals.

The EUR 6,226,042 thousand (2024: EUR 5,720,598 thousand) year-end total for cash and cash equivalents shown on the cash flow statement matches the cash and cash equivalents item on the balance sheet. The total comprises EUR 343 thousand (2024: EUR 392 thousand) in cash in hand, EUR 6,152,182 thousand (2024: EUR 5,661,171 thousand) in cash balances at banks, and EUR 73,517 thousand (2024: EUR 59,035 thousand) in marketable securities with maturities of no more than three months at the time of acquisition. Cash and cash equivalents in the amount of EUR 265,080 thousand are subject to restrictions (2024: EUR 279,026 thousand).

All non-cash income and expense and all income from asset disposals or arising on deconsolidation is eliminated in cash flow from operating activities.

Divestments relate to the deconsolidation of fully consolidated subsidiaries. This reduced non-current assets by EUR 442.651 thousand (2024: EUR 0 thousand) and current assets by EUR 2,450,566 thousand (2024: EUR 17,901 thousand). Non-current liabilities decreased by EUR 179,835 thousand (2024: EUR 0 thousand) and current liabilities by EUR 1,885,286 thousand (2024: EUR 26,118 thousand). Of the sales proceeds totalling EUR 549,700 thousand, EUR 256,000 thousand were settled in cash. No sale proceeds were generated in the prior year.

Dividends of EUR 393,459 thousand (2024: EUR 330,939 thousand) were paid to HOCHTIEF's shareholders in the reporting year. Dividends paid to non-controlling interests total EUR 115,477 thousand (2024: EUR 54,575 thousand).

38. Related party disclosures

Related parties as defined by IAS 24 include entities or persons that can be influenced by or that can influence HOCHTIEF Aktiengesellschaft and its subsidiaries or are subject to the control, joint control, or significant influence of HOCHTIEF Aktiengesellschaft or its subsidiaries. A significant related party is ACS, the parent company of HOCHTIEF Aktiengesellschaft. With the exception of the two transactions mentioned above, Flatiron and Leakes Road (Note 1), no material transactions were entered into between HOCHTIEF Aktiengesellschaft or any Group company and ACS or its affiliates during the reporting year. The main relationships between fully consolidated Group companies and related parties concern associated companies and joint ventures, whose operating transactions resulted in the following items in the financial statements:

	Associates		Joint ventures	
(EUR thousand)	2025	2024	2025	2024
Income	17,832	23,863	156,385	130,624
Expenses	3,147	3,168	7,115	4,773
Receivables	246	7,296	426,348	381,918
Liabilities	53,175	52,665	361,604	234,412

No other material transactions were entered into between HOCHTIEF Aktiengesellschaft or any Group company and Executive Board or Supervisory Board members or persons or companies close to them during the reporting period. There were no conflicts of interest involving Executive Board or Supervisory Board members.

39. Total Executive Board and Supervisory Board compensation

The Compensation Report outlines the principles applied when determining Executive Board compensation at HOCHTIEF Aktiengesellschaft and explains the amount and composition of that compensation. The principles applied and the amount of Supervisory Board compensation are also described.

Short-term and long-term benefits

The expense for short-term and for long-term Executive Board compensation in 2025 was EUR 5,980 thousand (2024: EUR 5,546 thousand) and EUR 2,884 thousand (2024: EUR 2,722 thousand), respectively.

Post-employment benefits

In the reporting year, pension expenses for incumbent members of the Executive Board comprised service cost of EUR 814 thousand (2024: EUR 431 thousand) and pension payments of EUR 485 thousand (2024: EUR 358 thousand) in accordance with IFRS.

Share-based payment

The expense for share-based payment in 2025 was EUR 4,016 thousand (2024: EUR 2,365 thousand).

Total Executive Board and Supervisory Board compensation pursuant to Section 314 (1) No. 6 in conjunction with Section 315e HGB

Total compensation for incumbent members of the Executive Board in 2025 came to EUR 12,233 thousand (2024: EUR 11,348 thousand).

Total Executive Board compensation includes share-based payment granted in the reporting year with a fair value of EUR 2,884 thousand (2024: EUR 2,722 thousand). The corresponding number of performance stock awards (PSAs) granted for 2025 will only be determined in the following financial year (2024: 10,592 PSAs).

Payments in the amount of EUR 6,056 thousand (2024: EUR 6,244 thousand) were made to former members of the Executive Board and their surviving dependents. Pension obligations to former members of the Executive Board and their surviving dependents in accordance with IFRS totaled EUR 82,811 thousand (2024: EUR 83,227 thousand).

Total compensation for fixed compensation, meeting attendance fees, and compensation for offices held at Group companies for the members of the Supervisory Board came to EUR 2,648 thousand (2024: EUR 2,231 thousand).

No advances or loans were granted to members of the Executive Board or members of the Supervisory Board in 2025 or in 2024.

40. Auditing fees

Fees for services provided in Germany by auditors Deloitte GmbH Wirtschaftsprüfungsgesellschaft were paid and recognized as expenses as follows:

(EUR thousand)	2025	2024
Financial statement audit services	2,275	2,162
Other assurance services	471	470
	2,746	**2,632**

The fees for financial statement audits relate to fees charged by Group auditors Deloitte GmbH Wirtschaftsprüfungsgesellschaft for auditing the HOCHTIEF Group consolidated financial statements, the combined HOCHTIEF Group and HOCHTIEF Aktiengesellschaft management report, and the financial statements of HOCHTIEF Aktiengesellschaft and its domestic subsidiaries, together with fees for the review of the half-year report as of June 30, 2025 and other financial statement audit services. The auditor provided other assurance services for HOCHTIEF Aktiengesellschaft in relation to agreed-upon procedures in accordance with ISAE 3000 in connection with the audit of the sustainability statement and the audit of the compensation report. Further other assurance services relate to an audit under Section 32 (1) of the German Securities Trading Act (WpHG).

41. Events since the balance sheet date and report on post-balance-sheet events

With regard to the closing of the Leakes Road Data Center and UGL Transport transactions in January 2026, please refer to the section "Basis of consolidation - Disposals".

42. Use of the exempting provisions in Section 264 (3) (and Section 264b) of the German Commercial Code

The following German domestic, fully consolidated subsidiaries make use of parts of the exempting provisions for the financial year 2025:

Copy of the Independent Auditor's Report:

Independent Auditor's Report
To HOCHTIEF Aktiengesellschaft, Essen/Germany
Report on the Audit of the Consolidated Financial Statements and of the Combined Management Report

Audit Opinions
We have audited the consolidated financial statements of HOCHTIEF Aktiengesellschaft, Essen/Germany, and its subsidiaries (the Group) which comprise the consolidated statement of financial position as at December 31, 2025, the consolidated statement of profit and loss and other comprehensive income, the consolidated statement of changes in equity and the consolidated statement of cash flows for the financial year from January 1 to December 31, 2025, and the notes to the consolidated financial statements, including material accounting policy information. In addition, we have audited the combined management report for the parent and the group of HOCHTIEF Aktiengesellschaft, Essen/Germany, for the financial year from January 1 to December 31, 2025.
In accordance with German legal requirements, we have not audited the content of the corporate governance statement pursuant to Sections 289f and 315d German Commercial Code (HGB), which is referred to in a footnote in the chapter "Group Structure and Business Activity, Business Model and Control System" of the combined management report, nor the sustainability statement included in the combined management report. Furthermore, we have not audited the content of those parts extraneous to management reports in the combined management report that are marked as unaudited.

In our opinion, on the basis of the knowledge obtained in the audit,

- the accompanying consolidated financial statements comply, in all material respects, with the IFRS® Accounting Standards issued by the International Accounting Standards Board (IASB) (hereinafter "IFRS Accounting Standards") as adopted by the EU and the additional requirements of German commercial law pursuant to Section 315e (1) HGB and, in compliance with these requirements, give a true and fair view of the assets, liabilities and financial position of the Group as at December 31, 2025 and of its financial performance for the financial year from January 1 to December 31, 2025, and

- the accompanying combined management report as a whole provides an appropriate view of the Group's position. In all material respects, this combined management report is consistent with the consolidated financial statements, complies with German legal requirements and appropriately presents the opportunities and risks of future development. Our audit opinion on the combined management report does not cover the content of the statements referred to above and of the parts extraneous to management reports.

Pursuant to Section 322 (3) sentence 1 German Commercial Code (HGB), we declare that our audit has not led to any reservations relating to the legal compliance of the consolidated financial statements and of the combined management report.

Basis for the Audit Opinions

We conducted our audit of the consolidated financial statements and of the combined management report in accordance with Section 317 HGB and the EU Audit Regulation (No. 537/2014; referred to subsequently as "EU Audit Regulation") and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the Institut der Wirtschaftsprüfer (IDW). Our responsibilities under those requirements and principles are further described in the "Auditor's Responsibilities for the Audit of the Consolidated Financial Statements and of the Combined Management Report" section of our auditor's report. We are independent of the group entities in accordance with the requirements of European law and German commercial and professional law and the International Code of Ethics for Professional Accountants (including International Independence Standards) of the International Ethics Standards Board for Accountants (IESBA Code), and we have fulfilled our other German professional responsibilities in accordance with these requirements. In addition, in accordance with Article 10 (2) point (f) of the EU Audit Regulation, we declare that we have not provided non-audit services prohibited under Article 5 (1) of the EU Audit Regulation. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions on the consolidated financial statements and on the combined management report.

Key Audit Matters in the Audit of the Consolidated Financial Statements

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated financial statements for the financial year from January 1 to December 31, 2025. These matters were addressed in the context of our audit of the consolidated financial statements as a whole and in forming our audit opinion thereon; we do not provide a separate audit opinion on these matters.

Below, we present what we consider to be key audit matters: "Realization of revenue, in particular the enforceability of unapproved change order claims from customer-specific construction contracts".

Our presentation of these key audit matters has been structured as follows:

a) description (including reference to corresponding information in the consolidated financial statements)
b) auditor's response

Realization of the revenue, in particular the enforceability of unapproved change order claims from customer-specific construction contracts

a) Revenue from customer-specific construction contracts of mEUR 37,999.4 (prior year: mEUR 33,064.1) is disclosed in the consolidated statement of profit and loss within the consolidated financial statements of HOCHTIEF Aktiengesellschaft. Furthermore, the statement of financial position item "Trade accounts receivable and other receivables" include trade receivables of mEUR 4,821.5 (prior year: mEUR 4,337.6) as well as contract assets with a value of mEUR 2,502.2 (prior year: mEUR 2,538.3), which together amount to mEUR 7,323.7 (prior year: mEUR 6,875.9) and thus count for 30.0% (prior year: 27.9%) of the consolidated total assets. Both sales revenue and receivables from customer-specific construction contracts are therefore of considerable importance for the Group's assets, liabilities and financial performance.

   A material share of the business activity of HOCHTIEF Group refers to the handling of customer-specific construction contracts. The work performed, including the pro rata result, is recognized in revenue according to the percentage of completion. The percentage of completion is calculated as the ratio of work performed to total contract performance. Revenue is recognized when the executive directors or the responsible management have assessed and estimated all relevant contract components, including - if applicable in individual cases - the components of determining the stage of completion, estimating the total contract performance and the total contract costs including cost increases, determining contractual performance claims and

assessing the probability of customer approval of deviations in the total contract value and the acceptance of supplementary claims, as well as estimating the expected completion date.

The executive directors determine the project-related percentage of completion required to account for customer-specific construction contracts on the basis of detailed project calculations. When assessing the enforceability of change order claims, the executive directors incorporate their project-related findings from negotiations with the respective customer and discussions with internal or external lawyers.

Disclosure is made under the statement of financial position item “Trade accounts receivable and other receivables”. In particular, the components over and above the contract price (deviations in the total contract value and change order claims) are associated with uncertainties with regard to their recognition and measurement. The recognition of change order claims is based on the estimates of the executive directors regarding the expected realizability of the amounts, as it must be highly probable for the recognition of corresponding receivables that there will be no significant cancellations in the future. The discretionary scope arises primarily in the assessment of the enforceability of unapproved change order claims.

The recognition of revenue over time, in particular the enforceability of significant unapproved change order claims, is a key audit matter because it requires significant estimates by the executive directors, in particular with regard to the total costs of a contract, the determination of the percentage of completion and, above all, the consideration of change order claims and contract risks, and also because the consolidated statement of financial position as at December 31, 2025 includes a significant amount of unapproved change order claims.

For information on the accounting policies applied, please refer to the explanations in the chapters “Revenue from contracts with customers“ and “Management judgment in applying accounting and valuation methods“ in the “Accounting and valuation methods“ chapter of the notes to the consolidated financial statements. In addition, information on the amount and breakdown of revenue can be found in the “Revenue“ section in the “Notes to the consolidated statement of profit and loss“ section of the notes to the consolidated financial statements.

b) During our audit, we obtained a detailed understanding of the underlying processes from the offer to the execution phase of construction contracts and assessed the extent to which the processes and the data used for this purpose can be influenced by subjectivity, complexity or other inherent risk factors. As part of this process, we assessed whether the requirements for revenue recognition over time in accordance with IFRS 15 are met for construction contracts. We have assessed the design and implementation of internal controls relevant to the audit to ensure the correct accounting of construction contracts in the consolidated financial statements. In the case of estimates made by executive directors, we assessed the methods used, the assumptions made, and the data used in terms of their reasonableness.

We performed substantive audit procedures on construction contracts selected according to risk factors. We have:

- analyzed the originally planned contract costs underlying the determination of the percentage of completion of the individual construction contracts and the updated planned costs used for the consolidated financial statements;

- analyzed the development of margins over the course of the year for anomalies and in comparison to the prior year and took the findings gained on this basis into account when reviewing the changes in planned costs and contract values;

- verified the proper and timely allocation of the cost of material and production costs recognized on the respective production order on the basis of purchase orders, performance records and supplier invoices;

- in individual cases, obtained evidence from third parties and assessed its accounting treatment;

- verified the recognition of the amounts of revenue by comparing the underlying transaction prices with the respective contractual bases;
- obtained and evaluated the estimates of the percentage of completion and project risks from the project managers appointed by the executive directors;

- assessed the appropriate accounting treatment of construction contracts and verified the recognition of any provisions for onerous contracts;

- in particular, assessed and verified the justification for the recognition of unapproved change order claims on the basis of suitable evidence.

Other Information
The executive directors and/or the supervisory board are responsible for the other information.
The other information comprises:

- the report of the supervisory board,

- the statement on corporate governance

- the non-financial group statement,

- the unaudited content of the combined management report marked as “unaudited”,

- the remuneration report pursuant to Section 162 AktG,

- the executive directors’ confirmations regarding the consolidated financial statements and the combined management report pursuant to Section 297 (2) sentence 4 and Section 315 (1) sentence 5 HGB, and

- all other parts of the annual report or “group report”,

- but not the consolidated financial statements, not the audited content of the disclosures in the combined management report and not our auditor’s report thereon.

The supervisory board is responsible for the report of the supervisory board. The executive directors and the supervisory board are responsible for the statement according to Section 161 AktG concerning the German Corporate Governance Code, which is part of the corporate governance statement, and for the remuneration report. Otherwise, the executive directors are responsible for the other information.

Our audit opinions on the consolidated financial statements and on the combined management report do not cover the other information, and consequently we do not express an audit opinion or any other form of assurance conclusion thereon.

In connection with our audit, our responsibility is to read the other information identified above and, in doing so, to consider whether the other information

- is materially inconsistent with the consolidated financial statements, with the audited content of the disclosures in the combined management report or our knowledge obtained in the audit, or

- otherwise appears to be materially misstated.

Responsibilities of the Executive Directors and the Supervisory Board for the Consolidated Financial Statements and the Combined Management Report

The executive directors are responsible for the preparation of the consolidated financial statements that comply, in all material respects, with IFRS Accounting Standards as adopted by the EU and the additional requirements of German commercial law pursuant to Section 315e (1) HGB, and that the consolidated financial statements, in compliance with these requirements, give a true and fair view of the assets, liabilities, financial position and financial performance of the Group. In addition, the executive directors are responsible for such internal control as they have determined necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud (i.e., fraudulent financial reporting and misappropriation of assets) or error.

In preparing the consolidated financial statements, the executive directors are responsible for assessing the Group's ability to continue as a going concern. They also have the responsibility for disclosing, as applicable, matters related to going concern. In addition, they are responsible for financial reporting based on the going concern basis of accounting unless there is an intention to liquidate the Group or to cease operations, or there is no realistic alternative but to do so.

Furthermore, the executive directors are responsible for the preparation of the combined management report that as a whole provides an appropriate view of the Group's position and is, in all material respects, consistent with the consolidated financial statements, complies with German legal requirements, and appropriately presents the opportunities and risks of future development. In addition, the executive directors are responsible for such arrangements and measures (systems) as they have considered necessary to enable the preparation of a combined management report that is in accordance with the applicable German legal requirements, and to be able to provide sufficient appropriate evidence for the assertions in the combined management report.

The supervisory board is responsible for overseeing the Group's financial reporting process for the preparation of the consolidated financial statements and of the combined management report.

Auditor's Responsibilities for the Audit of the Consolidated Financial Statements and of the Combined Management Report

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and whether the combined management report as a whole provides an appropriate view of the Group's position and, in all material respects, is consistent with the consolidated financial statements and the knowledge obtained in the audit, complies with the German legal requirements and appropriately presents the opportunities and risks of future development, as well as to issue an auditor's report that includes our audit opinions on the consolidated financial statements and on the combined management report.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Section 317 HGB and the EU Audit Regulation and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the Institut der Wirtschaftsprüfer (IDW) will always detect a material misstatement. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements and this combined management report.

We exercise professional judgment and maintain professional skepticism throughout the audit. We also:

– identify and assess the risks of material misstatement of the consolidated financial statements and of the combined management report, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our audit opinions. The risk of not detecting a material misstatement resulting from fraud is higher than the risk of not detecting a material misstatement resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- obtain an understanding of internal control relevant to the audit of the consolidated financial statements and of arrangements and measures relevant to the audit of the combined management report in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an audit opinion on the effectiveness of internal control or these arrangements and measures of the Group.

- evaluate the appropriateness of accounting policies used by the executive directors and the reasonableness of estimates made by the executive directors and related disclosures.

- conclude on the appropriateness of the executive directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in the auditor's report to the related disclosures in the consolidated financial statements and in the combined management report or, if such disclosures are inadequate, to modify our respective audit opinions. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to be able to continue as a going concern.

- evaluate the overall presentation, structure and content of the consolidated financial statements, including the disclosures, and whether the consolidated financial statements present the underlying transactions and events in a manner that the consolidated financial statements give a true and fair view of the assets, liabilities, financial position and financial performance of the Group in compliance with IFRS Accounting Standards as adopted by the EU and with the additional requirements of German commercial law pursuant to Section 315e (1) HGB.

- plan and perform the audit of the consolidated financial statements in order to obtain sufficient appropriate audit evidence regarding the financial information of the entities or of the business activities within the Group, which serves as a basis for forming audit opinions on the consolidated financial statements and on the combined management report. We are responsible for the direction, supervision and review of the audit procedures performed for the purposes of the group audit. We remain solely responsible for our audit opinions.

- evaluate the consistency of the combined management report with the consolidated financial statements, its conformity with German law, and the view of the Group's position it provides.

- perform audit procedures on the prospective information presented by the executive directors in the combined management report. On the basis of sufficient appropriate audit evidence we evaluate, in particular, the significant assumptions used by the executive directors as a basis for the prospective information, and evaluate the proper derivation of the prospective information from these assumptions. We do not express a separate audit opinion on the prospective information and on the assumptions used as a basis. There is a substantial unavoidable risk that future events will differ materially from the prospective information.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We provide those charged with governance with a statement that we have complied with the relevant independence requirements, and communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, the actions taken or safeguards applied to eliminate independence threats.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the consolidated financial statements for the current period and are therefore the key audit matters. We describe these matters in the auditor's report unless law or regulation precludes public disclosure about the matter.

OTHER LEGAL AND REGULATORY REQUIREMENTS

Report on the Assurance on the Electronic Reproductions of the Consolidated Financial Statements and of the Combined Management Report Prepared for Publication Pursuant to Section 317 (3a) HGB

Assurance Opinion
We have performed assurance work in accordance with Section 317 (3a) HGB to obtain reasonable assurance whether the electronic reproductions of the consolidated financial statements and of the combined management report (hereinafter referred to as "ESEF documents") prepared for publication, contained in the file, which has the SHA-256 value ab1a192dc414fe997806e981ee6a7c38d5f19382c30ab975240dade25bd3bed6, meet, in all material respects, the requirements for the electronic reporting format pursuant to Section 328 (1) HGB ("ESEF format"). In accordance with the German legal requirements, this assurance work only covers the conversion of the information contained in the consolidated financial statements and the combined management report into the ESEF format, and therefore covers neither the information contained in these electronic reproductions nor any other information contained in the file identified above.

In our opinion, the electronic reproductions of the consolidated financial statements and of the combined management report prepared for publication contained in the file identified above meet, in all material respects, the requirements for the electronic reporting format pursuant to Section 328 (1) HGB. Beyond this assurance opinion and our audit opinions on the accompanying consolidated financial statements and on the accompanying combined management report for the financial year from January 1 to December 31, 2025 contained in the "Report on the Audit of the Consolidated Financial Statements and of the Combined Management Report" above, we do not express any assurance opinion on the information contained within these electronic reproductions or on any other information contained in the file identified above.

Basis for the Assurance Opinion
We conducted our assurance work on the electronic reproductions of the consolidated financial statements and of the combined management report contained in the file identified above in accordance with Section 317 (3a) HGB and on the basis of the IDW Assurance Standard: Assurance Work on the Electronic Reproductions of Financial Statements and Management Reports Prepared for Publication Purposes Pursuant to Section 317 (3a) HGB (IDW AsS 410 (06.2022)). Our responsibilities in this context are further described in the "Group Auditor's Responsibilities for the Assurance Work on the ESEF Documents" section. Our audit firm has applied the requirements of the IDW Quality Management Standards.

Responsibilities of the Executive Directors and the Supervisory Board for the ESEF Documents
The executive directors of the Company are responsible for the preparation of the ESEF documents based on the electronic files of the consolidated financial statements and of the combined management report according to Section 328 (1) sentence 4 no. 1 HGB and for the tagging of the consolidated financial statements according to Section 328 (1) sentence 4 no. 2 HGB.

In addition, the executive directors of the Company are responsible for such internal control that they have considered necessary to enable the preparation of ESEF documents that are free from material intentional or unintentional non-compliance with the requirements for the electronic reporting format pursuant to Section 328 (1) HGB.

The supervisory board is responsible for overseeing the process for preparing the ESEF documents as part of the financial reporting process.

Group Auditor's Responsibilities for the Assurance Work on the ESEF Documents
Our objective is to obtain reasonable assurance about whether the ESEF documents are free from material intentional or unintentional non-compliance with the requirements of Section 328 (1) HGB.

We exercise professional judgment and maintain professional skepticism throughout the assurance work. We also:

- identify and assess the risks of material intentional or unintentional non-compliance with the requirements of Section 328 (1) HGB, design and perform assurance procedures responsive to those risks, and obtain assurance evidence that is sufficient and appropriate to provide a basis for our assurance opinion.

- obtain an understanding of internal control relevant to the assurance on the ESEF documents in order to design assurance procedures that are appropriate in the circumstances, but not for the purpose of expressing an assurance opinion on the effectiveness of these controls.

- evaluate the technical validity of the ESEF documents, i.e., whether the file containing the ESEF documents meets the requirements of the Delegated Regulation (EU) 2019/815, in the version in force at the balance sheet date, on the technical specification for this electronic file.

- evaluate whether the ESEF documents enable an XHTML reproduction with content equivalent to the audited consolidated financial statements and to the audited combined management report.

- evaluate whether the tagging of the ESEF documents with Inline XBRL technology (iXBRL) in accordance with the requirements of Articles 4 and 6 of the Delegated Regulation (EU) 2019/815, in the version in force at the balance sheet date, enables an appropriate and complete machine-readable XBRL copy of the XHTML reproduction.

Further Information Pursuant to Article 10 of the EU Audit Regulation
We were elected as group auditor by the general meeting on April 29, 2025. We were engaged by the supervisory board on April 29, 2025. We have been the group auditor of HOCHTIEF Aktiengesellschaft, Essen/Germany, without interruption since the financial year 2023.

We declare that the audit opinions expressed in this auditor's report are consistent with the additional report to the audit committee pursuant to Article 11 of the EU Audit Regulation (long-form audit report).

OTHER MATTER – USE OF THE AUDITOR'S REPORT

Our auditor's report must always be read together with the audited consolidated financial statements and the audited combined management report as well as with the assured ESEF documents. The consolidated financial statements and the combined management report converted into the ESEF format – including the versions to be submitted for inclusion in the Company Register – are merely electronic reproductions of the audited consolidated financial statements and the audited combined management report and do not take their place. In particular, the ESEF report and our audit opinion contained therein are to be used solely together with the audited ESEF documents made available in electronic form.

GERMAN PUBLIC AUDITOR RESPONSIBLE FOR THE ENGAGEMENT

The German Public Auditor responsible for the engagement is Michael Pfeiffer.

Düsseldorf/Germany, February 18, 2026

Deloitte GmbH
Wirtschaftsprüfungsgesellschaft

Signed:
André Bedenbecker
Wirtschaftsprüfer
(German Public Auditor)

Signed:
Michael Pfeiffer

Assurance report of the Independent German Public Auditor on a limited assurance engagement in relation to the Consolidated Sustainability Statement

To HOCHTIEF Aktiengesellschaft, Essen/Germany

Assurance Conclusion

We have conducted a limited assurance engagement on the Consolidated Non-Financial Statement of HOCHTIEF Aktiengesellschaft, Essen/Germany, combining the Consolidated Sustainability Statement and the Non-Financial Statement of the parent, included in section “Sustainability Statement” of the combined management report for the parent and the group for the financial year from January 1 to December 31, 2025, (hereafter referred to as “the Consolidated Sustainability Statement”). The Consolidated Sustainability Statement was prepared to fulfil the requirements of Directive (EU) 2022/2464 of the European Parliament and of the Council of December 14, 2022 (Corporate Sustainability Reporting Directive, CSRD) and Article 8 of Regulation (EU) 2020/852 and Sections 315b and 315c German Commercial Code (HGB) for a consolidated non-financial statement.

Not subject to our assurance engagement are

- the references to information of the Company outside of the combined management report marked as unassured, and

- the further references in the Consolidated Sustainability Statement to information in the consolidated financial statements and in the other parts of the combined management report.

Based on the procedures performed and the evidence obtained, nothing has come to our attention that causes us to believe that the accompanying Consolidated Sustainability Statement is not prepared, in all material respects, in accordance with the requirements of the CSRD and Article 8 of Regulation (EU) 2020/852, Sections 315b and 315c HGB for a consolidated non-financial statement, and the specifying criteria presented by the executive directors of the Company. This assurance conclusion includes that nothing has come to our attention that causes us to believe

- that the accompanying Consolidated Sustainability Statement does not comply, in all material respects, with the European Sustainability Reporting Standards (ESRS), including that the process carried out by the entity to identify information to be included in the Consolidated Sustainability Statement (the materiality assessment) is not, in all material respects, in accordance with the description set out in section ”Management of impact, risks and opportunities“ of the Consolidated Sustainability Statement, or

- that the disclosures in the Consolidated Sustainability Statement do not comply, in all material respects, with Article 8 of Regulation (EU) 2020/852.

Translation/German version prevails

We do not express an assurance conclusion on the references to information of the Company outside of the combined management report marked as unassured and the further references in the Consolidated Sustainability Statement to information in the consolidated financial statements and in the other parts of the combined management report.

Basis for the Assurance Conclusion
We conducted our assurance engagement in accordance with the International Standard on Assurance Engagements (ISAE) 3000 (Revised): "Assurance Engagements Other Than Audits or Reviews of Historical Financial Information", issued by the International Auditing and Assurance Standards Board (IAASB).

The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement. Consequently, the level of assurance obtained is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

Our responsibilities under ISAE 3000 (Revised) are further described in section "German Public Auditor's Responsibilities for the Assurance Engagement on the Consolidated Sustainability Statement".

We are independent of the entity in accordance with the requirements of European law and German commercial and professional law, and we have fulfilled our other German professional responsibilities in accordance with these requirements. Our audit firm has applied the requirements of the IDW Quality Management Standards. We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our assurance conclusion.

Responsibilities of the Executive Directors and the Supervisory Board for the Consolidated Sustainability Statement
The executive directors are responsible for the preparation of the Consolidated Sustainability Statement in accordance with the requirements of the CSRD and the applicable German legal and other European requirements as well as with the specifying criteria presented by the executive directors of the Company and for designing, implementing and maintaining such internal control as they have considered necessary to enable the preparation of a consolidated sustainability statement in accordance with these requirements that is free from material misstatement, whether due to fraud (i.e. fraudulent reporting in the Consolidated Sustainability Statement) or error.

This responsibility of the executive directors includes establishing and maintaining the materiality assessment process, selecting and applying appropriate reporting policies for preparing the Consolidated Sustainability Statement as well as making assumptions and estimates and ascertaining forward-looking information for individual sustainability-related disclosures.

The supervisory board is responsible for overseeing the process for the preparation of the Consolidated Sustainability Statement.

Inherent Limitations in Preparing the Consolidated Sustainability Statement
The CSRD and the applicable German legal and other European requirements contain wording and terms that are subject to considerable interpretation uncertainties and for which no authoritative comprehensive interpretations have yet been published. The executive directors have disclosed interpretations of such wording and terms in the Consolidated Sustainability Statement.] The executive directors are responsible for the reasonableness of these interpretations. As such wording and terms may be interpreted differently by regulators or courts, the legality of measurements or evaluations of the sustainability matters based on these interpretations is uncertain. The quantification of non-financial performance indicators disclosed in the Consolidated Sustainability Statement is also subject to inherent uncertainties.

These inherent limitations also affect the assurance engagement on the Consolidated Sustainability Statement.

German Public Auditor's Responsibilities for the Assurance Engagement on the Consolidated Sustainability Statement

Our objective is to express a limited assurance conclusion, based on the assurance engagement we have conducted, on whether any matters have come to our attention that cause us to believe that the Consolidated Sustainability Statement has not been prepared, in all material respects, in accordance with the CSRD, the applicable German legal and other European requirements and the specifying criteria presented by the executive directors of the Company and to issue an assurance report that includes our assurance conclusion on the Consolidated Sustainability Statement.

As part of a limited assurance engagement in accordance with ISAE 3000 (Revised), we exercise professional judgment and maintain professional skepticism. We also

- obtain an understanding of the process used to prepare the Consolidated Sustainability Statement, including the materiality assessment process carried out by the entity to identify the disclosures to be reported in the Consolidated Sustainability Statement.

- identify disclosures where a material misstatement due to fraud or error is likely to arise, design and perform procedures to address these disclosures and obtain limited assurance to support the assurance conclusion. The risk of not detecting a material misstatement resulting from fraud is higher than the risk of not detecting a material misstatement resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations or the override of internal control. In addition, the risk of not detecting a material misstatement in information obtained from sources not within the entity's control (value chain information) is ordinarily higher than the risk of not detecting a material misstatement in information obtained from sources within the entity's control, as both the entity's executive directors and we as practitioners are ordinarily subject to restrictions on direct access to the sources of the value chain information.

- consider the forward-looking information, including the appropriateness of the underlying assumptions. There is a substantial unavoidable risk that future events will differ materially from the forward-looking information.

Summary of the Procedures Performed by the German Public Auditor

A limited assurance engagement involves the performance of procedures to obtain evidence about the sustainability information. The nature, timing and extent of the selected procedures are subject to our professional judgment.

In performing our limited assurance engagement, we

- evaluated the suitability of the criteria as a whole presented by the executive directors in the Consolidated Sustainability Statement.

- inquired of the executive directors and relevant employees involved in the preparation of the Consolidated Sustainability Statement about the preparation process, including the materiality assessment process carried out by the entity to identify the disclosures to be reported in the Consolidated Sustainability Statement, and about the internal controls related to this process.

- evaluated the reporting policies used by the executive directors to prepare the Consolidated Sustainability Statement.

- evaluated the reasonableness of the estimates and related information provided by the executive directors. If, in accordance with the ESRS, the executive directors estimate the value chain information to be reported for a case in which the executive directors are unable to obtain the information from the value chain despite making reasonable efforts, our assurance engagement is limited to evaluating whether the executive directors have undertaken these estimates in accordance with the ESRS and assessing the reasonableness of these estimates, but does not include identifying information in the value chain that the executive directors were unable to obtain.

– performed analytical procedures or tests of details and made inquiries in relation to selected information in the Consolidated Sustainability Statement.

– conducted site visits.

– considered the presentation of the information in the Consolidated Sustainability Statement.

– considered the process for identifying taxonomy-eligible and taxonomy-aligned economic activities and the corresponding disclosures in the Consolidated Sustainability Statement.

Restriction of Use
We issue this report as stipulated in the engagement letter agreed with the Company (including the "General Engagement Terms for Wirtschaftsprüferinnen, Wirtschaftsprüfer and Wirtschaftsprüfungsgesellschaften (German Public Auditors and Public Audit Firms)" dated 1 January 2024 of the Institut der Wirtschaftsprüfer (IDW)). We draw attention to the fact that the assurance engagement was conducted for the Company's purposes and that the report is intended solely to inform the Company about the result of the assurance engagement. Consequently, it may not be suitable for any other than the aforementioned purpose. Accordingly, the report is not intended to be used by third parties as a basis for making (financial) decisions.

Our responsibility is to the Company alone. We do not accept any responsibility to third parties. Our assurance conclusion is not modified in this respect.

HOCHTIEF Sustainability Plan 2025

In this section, we present the targets published by HOCHTIEF in 2022 under the Sustainability Plan 2025, based on a comprehensive internal strategy process. For our various commitments, we have specified key performance indicators (KPIs) enabling us to measure our progress and target achievement.

The further development of new sustainability targets is currently in progress with a view to access its implementation in 2026.

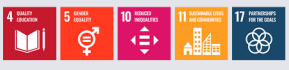
Environmental

Governance

Social



Digitalization

The content in this section is neither part of the statutory audit of the annual financial statements and consolidated financial statements nor part of the separate limited assurance engagement by Deloitte GmbH Wirtschaftsprüfungsgesellschaft.

Environmental Dimension: Commitments and key performance indicators

Global Environmental Management

Increase the percentage of total employees covered by Environmental Management System Certification (ISO 14001) to at least 90% by 2025	• Percentage of total employees covered by Environmental Management System Certification (ISO14001)
Increase awareness and knowledge regarding relevant environmental topics through trainings of at least 50% of the employees by 2025	• Number of training hours per employee with respect to environmental topics • Percentage of employees trained in environmental topics
Zero environmental incidents with severe environmental damage (category 1)	• Number of environmental incidents (category 1 and 2)

Climate Change

Achieve Carbon Neutrality (“Net Zero”) by 2045	• Direct GHG emissions (scope 1) (tCO_2e) • Indirect GHG emissions (scope 2) (tCO_2e) - Percentage of purchased renewable of total electricity consumption - Percentage of produced renewables of total electricity consumption • Other indirect GHG emissions (scope 3) (tCO_2e) • Intensity of GHG emissions (tCO_2e/€)
Achieve Carbon Neutrality for scope 1 emissions by 2038 Reduce scope 1 emissions by at least 20% until 2025 compared to base year 2019	
Achieve Carbon Neutrality for scope 2 emissions by 2038 Reduce scope 2 emissions by at least 35% until 2025 compared to base year 2019	
Achieve Carbon Neutrality for scope 3 emissions (in relevant categories) by 2045	
Verify Net Zero path—consistent with limiting temperature rise to 1.5 °C until the end of 2023	

Circular Economy

Achieve zero waste[1] to landfill by 2045	• Waste to landfill (t) • Waste volume by type and disposal method (t) • Annual recycling rate for waste (%) • Percentage of self-generated hazardous waste of total waste • Number of lifecycle/circularity analyses executed for construction projects • Percentage of construction projects recording building materials digitally (BIM 6D)
Achieve annual recycling rate for waste of at least 80% until 2025 and increase the rate consecutively afterwards	
Reduce self-generated hazardous waste to less than 1% of total waste by 2030	

[1] Non-hazardous waste, and all hazardous waste self-generated by HOCHTIEF

Promote life-cycle analyses by actively engaging clients and carry out this analysis in at least 200 construction projects by 2025	• Percentage of recycled building materials of total building materials for the respective types of material • Percentage of certified wood of total wood (e.g. FSC, PEFC, SFI)
Increase the share of construction projects recording building materials digitally (BIM 6D) by at least 10% from year to year.	
Promote reuse and increase the rate of recycled building materials steadily	

Water Protection

Promote water protection on all projects	• Percentage of projects in water-stressed areas that have implemented a water protection plan • Total water consumption (m^3) • Percentage of water consumption in water-stressed areas of total water consumption • Percentage of recycled water of total water withdrawn
implement water protection plans and execute corresponding measures in 100% of the projects in water-stressed areas by 2023	
Implement measures to reduce water consumption and achieve an annual water recycling/reuse rate of at least 10% of total water withdrawn	

Biodiversity and Ecosystems

Create awareness and preserve biodiversity and ecosystems on all projects	• Percentage of projects in environmentally sensitive areas that have implemented a biodiversity management action plan
Implement biodiversity management action plans and execute corresponding measures in 100% of the projects in environmentally sensitive areas by 2023	
Establish and implement long-term initiatives to proactively preserve ecosystems and increase biodiversity	• Number of initiatives to preserve or increase biodiversity and ecosystems

Sustainable Products and Services

Stimulate innovation and develop sustainable products and services	• Number of sustainable products and services developed • Percentage of certified construction project revenue of total infrastructure and building revenue • Percentage of revenue according to EU Taxonomy alignment methodology • Number of projects with sustainable construction certification (e.g. LEED, DGNB, ISCA) • Number of accredited auditors in sustainable construction certification (e.g. LEED, DGNB, ISCA) • Number and percentage of construction projects with sustainable solutions in bidding processes and/or during preconstruction processes
Achieve at least 50% of total infrastructure and building revenue from certified construction projects by 2025	
Provide sustainable solutions in bidding and/or during preconstruction processes of at least 50% of the construction projects by 2025	

Social Dimension: Commitments and key performance indicators

Health and Safety

Accident-free project delivery; 0 fatalities in all activities for own employees and subcontractors

LTIFR of 1.04 by 2025, with long-term objective of 0.9 by 2030

100% of new hires trained on health and safety, by 2023

Increase the percentage of total employees covered by Occupational Health and Safety certifications (such as BS OSHAS 18001 or ISO 45001) to 100% by 2023

Improve the accident rates of contractors by increasing training and awareness of contractors in Health and Safety issues by 2025

- Lost time injury frequency rate (LTIFR)

Workplace Variety

Increase the presence of women in senior management positions by 50% until 2025 compared to 2019

At least 35% of female technical trainees among new hires by 2025 worldwide (mirroring the employment market)

Encourage generational diversity in the teams, fostering close collaboration between older and younger professionals by 2025.

- Different genders share of the total workforce
- Different genders in all management positions
- Different genders in junior management positions
- Different genders in top management positions
- Number of new hires affiliated to the different genders
- Workforce by age groups

Training, Talent and Recruitment

Increase the training hours per company to at least 20 hours per person by 2023

Increase annually the employee training on sustainability-related (climate change, sustainability standards, circular economy in construction, environmental management, diversity, equality, inclusion, anti-discrimination, anti-harassment and anti-bullying, etc.) topics

Promote specific training programs for young talent to facilitate their promotion within the company

- Total hours taught
- Hours of training per employee Group-wide

Working Environment

Further turnover ranges are determined in the Group companies and will be monitored	• Workforce breakdown by professional category • Fixed contracts vs. temporary contracts (by gender, by professional categories) • Group-wide turnover rate

Social Activities

Increase the budget for donation and sponsorship by 3% annually until 2025 (started in 2022)	• Group-wide budget for donations and sponsorship
Improve the monitoring of volunteer projects developed, implementing methodologies that allow us to measure the positive impact on the community - 2025.	
Promote corporate volunteering initiatives regarding SDG 4 Quality Education and SDG 11 Sustainable cities and communities	

Governance Dimension: Commitments and key performance indicators

Sustainability Governance

Integrate ESG targets in the compensation of the Executive Board and Executives Group-wide, by 2025	• Non-financial indicators linked to the variable compensation of the Executive Board • % of Executives with ESG targets linked to their variable compensation (Group-wide)

Anti-corruption and Anti-bribery

Maintain 100% of the employees trained in compliance (including all new hires)	• Compliance training per employee (average)

Responsible Supply Chain

Include ESG criteria in 50% of the significant supplier's selection process (based on procurement spend), by 2025

Increase annually the percentage of suppliers receiving systematic post project assessment, with at least 50% of significant suppliers assessed by 2025

- Expenditure in local suppliers
- % of critical tier 1 suppliers evaluated in terms of ESG
- % of suppliers that adhered to ethical, social and governance standards (or have certificates)
- % of suppliers that receive a post project assessment
- % of suppliers approved with ESG criteria
- % of suppliers that have identified ESG risks and have implemented corrective actions
- Total consumption of building materials

Human Rights

Train 100% of the employees in Human Rights Risks by 2025

- Number of employees trained in human rights

Sustainable Finance

Integrate the EU Sustainable Finance Action Plan/ Taxonomy and/or ESG criteria into financial decisions

- Turnover, Capex and Opex eligibility and non-eligibility according to the European Taxonomy (2022)
- Turnover, Capex and Opex aligned with the European Taxonomy (2023 onwards)

Enabler

Digital and Innovation

50% of R+D+I projects in sustainable-related projects by 2025

- Investment volume in R+D+i projects (EUR)
- Investment volume in R+D+i sustainability-related projects
- R+D+I investment/revenues
- Number of R+D+i sustainability-related projects
- Number of patents in sustainability-related issues

E

Environment
Update on selected targets

1 In the summer of 2025, the Turmstraße bridge construction project in Aachen became the first HOCHTIEF infrastructure project to receive the prestigious “Sustainable Construction Site” (Nachhaltige Baustelle) certification from the German Sustainable Building Council. This certificate confirmed the high quality standards with which the project team worked and thus the excellent quality of the construction work. | **2** Sustainability in a practical and concrete way: Twenty sustainability managers and coordinators from HOCHTIEF Infrastructure’s European units met in Prague for the second sustainability workshop. The meeting focused primarily on environmental issues. | **3** A team from UGL helped plant more than 2,000 native trees along the bushland on the Swan River near Perth, supporting landscape regeneration. UGL is working with the organization Trillion Trees Australia on this project. The activities help combat salinisation and soil erosion, improve biodiversity, and create habitats for native species.

Our target in the Sustainability Plan	Status as of 2025
Global Environmental Management	
Increase the percentage of total employees covered by Environmental Management System Certification (ISO 14001) to at least 90% by 2025	• Group-wide coverage in terms of percentage of corporate units certified to the DIN EN ISO 14001 environmental management system standard: 97% (2024: 97%) • We have thus achieved and significantly exceeded our target.
Increase awareness and knowledge regarding relevant environmental topics through trainings of at least 50% of the employees by 2025	• Extensive environmental training was provided in all operational units during the reporting year. Topics and target groups were defined in collaboration with the international working group “Training” and environmental experts from the operational units. Out of the relevant 13,001 employees, 11,258 were provided with environmental training, corresponding to a 87% training rate—clearly above our 50% target.
Climate Change	
Achieve Carbon Neutrality (“Net Zero”) by 2045	• 27% reduction in absolute GHG emissions compared to the 2019 baseline • Presented GHG intensity reduced by no less than 53% • Continuation of Net Zero Roadmap measures in all Group companies: • Group-wide focus on measures that reduce embodied carbon (design, construction process, machinery, materials)
For Scope 1 and Scope 2 emissions, we aim to be climate-neutral by 2038, and have additionally specified short-term reduction targets through 2025. We thus plan to reduce Scope 1 emissions by at least 20% and Scope 2 emissions by at least 35% compared to base year 2019 and to achieve a 50% reduction in combined Scope 1 and Scope 2 emissions by 2030.	• 37% reduction in absolute Scope 1 emissions compared to the 2019 baseline • Presented Scope 1 intensity reduced by no less than 60% • 37% reduction in absolute Scope 2 emissions (location-based) compared to the 2019 baseline • Presented Scope 2 intensity reduced by no less than 60% • 37% reduction in absolute, combined Scope 1 and 2 emissions compared to the 2019 baseline; 60% reduction considering higher sales • Group-wide Green Energy Initiative for the generation and use of renewable energy implemented in the reporting year
27.5% reduction in Scope 3 emissions by 2030 relative to our 2019 baseline	• 25% reduction in absolute Scope 3 emissions compared to the 2019 baseline • Presented Scope 3 intensity reduced by no less than 53% • Implementation of further measures in the Net Zero Roadmap as well as the Embodied Carbon Initiative to reduce upstream and downstream value chain emissions

Our target in the Sustainability Plan	Status as of 2025
Circular Economy	
We aim to increase by at least 10% from year to year the share of construction projects recording building materials digitally.	• Digital recording on 259 active projects (2024: 197), marking an increase of 31% year on year. • Substantial increase in the reporting year highlights the importance of digitalization also with regard to the circular economy • This means we not only achieved but also significantly exceeded our targets.
Promote life-cycle analyses by actively engaging with clients and carry out this analysis in at least 200 construction projects by 2025	• Life-cycle analyses on a total of 226 projects (2024: 143 in all regions since 2022 • By using LCA, we develop sustainable and cost-efficient projects for our clients that are optimized over the entire life cycle • This means we not only achieved but also exceeded our target.
In order to further improve our contribution to the circular economy, we have defined the following Group targets: **• Achieve annual recycling rate for waste of at least 80% by 2025 and increase the rate consecutively afterwards** **• Reduce self-generated hazardous waste to less than 1% of total waste by 2030** **• Achieve zero waste to landfill by 2045**	• Target once again achieved with waste recycling rate (including reuse) of 86% (2024: 83%). • In the four years of application of the Sustainability Plan 2025, an average recycling rate of 87% was achieved. • The ratio of self-generated hazardous waste to total waste volume was less than 0.04% (2024: less than 0.3%). • This means we achieved our targets.
By 2025: Promote reuse and increase the rate of recycled building materials steadily	• Significant improvements in recycling rates for construction materials used: – Concrete to 41% (2024: 37%) – Asphalt to 66% (2024: 45%) • The scope for using recycled construction materials depends very heavily on the type of project, regional circumstances, and also contractual arrangements. • This means we achieved our targets as in previous years.
Water Protection	
By 2025: Implement measures to reduce water consumption and achieve an annual water recycling/reuse rate of at least 10% of total water withdrawn	• Water recycling rate of 12% (2024: 27%), equivalent to a saving of 533,420 cubic meters (2024: 907,041 cubic meters). • Close involvement of experts from the operational units coupled with the sharing of ideas in the international working group on water helped to save water by implementing water recycling on a large scale in the reporting year. • This means we achieved our targets as in previous years.
Promote water protection on all projects, implement water protection plans, and execute corresponding measures in 100% of the projects in water-stressed areas by 2023	• Water protection plans implemented for 148 out of 148 projects in water-stressed areas, corresponding to 100% (2024: 100%). • Development of an approach for project-specific analysis of water risk • The international working group “Water” shares know-how and best practices within the operating units. • This means we achieved our targets as in previous years.

Our target in the Sustainability Plan	Status as of 2025
Biodiversity and Ecosystems	
Create awareness and preserve biodiversity and ecosystems on all projects.	• Biodiversity and Ecosystems Impact Approach • Extensive training and campaigns • Development of an approach for project-specific risk analysis
Implement biodiversity management action plans and execute corresponding measures in 100% of the projects in environmentally sensitive areas by 2023	• Target once again achieved by implementing biodiversity management action plans in 61 out of a total of 61 projects in environmentally sensitive areas, for 100% target achievement (2024: 100%)
Establish and implement long-term initiatives to proactively preserve ecosystems and increase biodiversity	• Development of an approach for project-specific risk analysis • Involvement of biodiversity experts in our projects • The international working group “Biodiversity” shares know-how and best practices within the operating units. • This means we achieved our targets.
Sustainable Products and Services	
We aim to stimulate innovation and develop sustainable products and services.	• Further advancement of HOCHTIEF strategy with project awards relating to the energy and mobility transition as well as to digital infrastructure. • Volume of new orders for clients in high-tech market segments within the HOCHTIEF Group: EUR 20 billion.
HOCHTIEF aims to achieve at least 50% of total infrastructure and building revenue from certified construction projects by 2025.	• EUR 17.2 billion (2024: EUR 12.9 billion) generated from energy-efficient infrastructure and building construction projects • In listings published by the renowned Engineering News-Record (ENR) industry magazine, Turner once again ranked first among the Top Green Contractors. • This means we achieved our target.
Provide sustainable solutions in bidding and/or during preconstruction processes of at least 50% of the construction projects by 2025.	• Continued proposal of innovative ideas for sustainable project execution in dialogue with clients. • Further increase in the proportion of projects with early contractor involvement • In the reporting year, we proposed sustainable solutions in 54% of projects awarded to us. • This means we achieved our target.

S

Social
Update on selected targets

1 Action day against hunger: A UGL team spent a day with the Our Big Kitchen organization, which campaigns against hunger and food waste. The volunteers prepared around 200 meals, which were distributed to hungry people in the evening. | **2** 80 meters of safety: The new Gitenga Bridge in northern Rwanda spans the Base River, directly benefiting 2,800 people. A volunteer team of HOCHTIEF employees from around the world built the structure in November 2025 in collaboration with the NGO Bridges to Prosperity and local workforce. | **3** Service to the community: More than 13,000 Turner employees—such as those pictured here in New York City—participated in community activities in 2025 as part of Turner Founder's Month. These activities ranged from food and relief supply drives to renovating community spaces and supporting local hospitals.

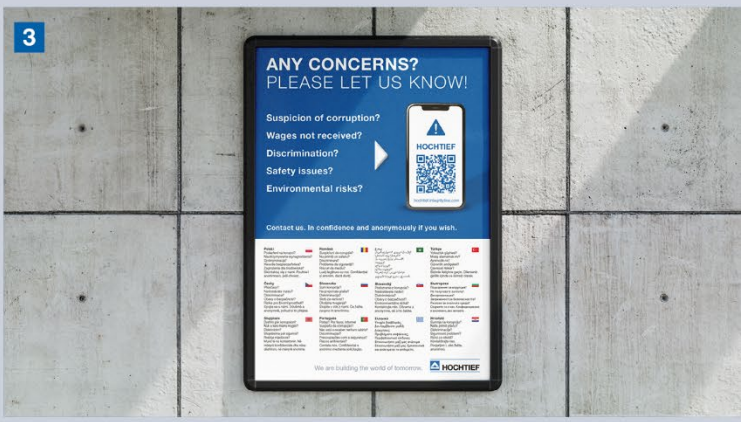
The content in this section is neither part of the statutory audit of the annual financial statements and consolidated financial statements nor part of the separate limited assurance engagement by Deloitte GmbH Wirtschaftsprüfungsgesellschaft. Images: © CIMIC (1); © HOCHTIEF (2) © Turner (3)

Our target in the Sustainability Plan	Status as of 2025
Health and Safety	
Increase the percentage of total employees covered by Occupational Health and Safety certifications (such as ISO 45001) to 100% by 2023.	• The quota remained at 99.8% in the reporting year (2024: 99.8%) • We aim to ensure in future years that our occupational safety standards are adhered to by all employees.
LTIFR of 1.04 by 2025 and long-term objective of 0.9 by 2030.	• The lost time injury frequency rate (LTIFR) was 0.71 in the reporting year (2024: 0.66). This consistently good result confirms the effectiveness of the management systems and prevention measures implemented in the field of occupational safety and health. • We will continue to pursue our measures in the field of occupational safety and health in the future.
Improve the accident rates of contractors by increasing training and awareness in health and safety issues by 2025.	• LTIFR at contractors 2025: 0.52 (2023: 0.44); the figure relates to Group companies CIMIC and Turner. • By developing the LTIFR for contractors, we were able to once again demonstrate that we have promoted health and safety awareness along our value chain, including through training programs.
100% of new hires trained on health and safety by 2023.	• Once again in 2025, 99.7% of new hires completed occupational safety and health training. • In this way, we empower employees to actively help create a safe working environment right from the start of their employment.
Accident-free project execution as well as zero fatalities among own employees and at subcontractors in all activities.	• It is with great sadness that we report having recorded one fatal work-related accident at subcontractor level in 2025. • Investigations to precisely analyze and clarify the causes of the accident are still ongoing.
Workplace Variety	
Depending on the situation on the labor market, the percentage of female technical trainees among new hires is to increase to at least 35% by 2025.	• The percentage of female engineering trainees stood at 28.6% in 2025 (2024: 30.5%). • We also consider this quota in light of the development of the proportion of female technical junior staff in local labor markets.
Increase the presence of women in senior management positions* by 50% until 2025 compared to 2019.	• The number of women in senior management positions* increased to 18.1% in 2025 (2024: 17.6%). • A considerable increase compared to 2019 confirms the effectiveness of the action we have taken. * comprising the first and second level below management in each case
We aim to further promote cross-generational team working by 2025.	• We continued to promote collaboration in the reporting year through training and mentoring programs.

Our target in the Sustainability Plan	Status as of 2025
Training, Talent and Recruitment	
Increase the training hours per company to at least 20 hours per person by 2023.	• With 23.1 training hours per head in 2025 (Group-wide), we once again succeeded in matching the high level of the prior year (2024: 23.1 hours). • In addition to local training programs, the Group-wide ACS University provides new courses that draw on the industry-leading expertise of our companies to offer our employees modern learning opportunities. This will enable us to continuously improve the level of training our employees receive.
We aim to promote specific training programs for young talent to facilitate their promotion within the Group.	• We have established suitable training programs and continue to fine-tune them. • All operating companies offer special training programs focusing on various topics that successfully support our junior staff in their career development.
More training with a focus on sustainability	• During the reporting period, we offered training programs in various formats related to the ESG dimensions. • Environmental training courses were offered in all segments, for example on environmentally friendly technologies for energy efficiency and emissions reduction in buildings at Turner, and on relevant sustainability issues in the construction industry at CIMIC and HOCHTIEF Infrastructure in Germany.
Working Environment	
Future turnover ranges are determined in the Group companies and will be monitored.	• The process is firmly established at HOCHTIEF.
Social Activities	
Promote corporate volunteering initiatives regarding SDG 4 (Quality Education) and SDG 11 (Sustainable Cities and Communities).	• We continue to support corporate volunteering initiatives and stepped up our efforts with regard to SDG 4 (Quality Education) and SDG 11 (Sustainable Cities and Communities).
By 2025, we aim to improve the monitoring of volunteer projects developed and to have implemented methodologies that allow us to measure the positive impact on the community.	• We have supplemented our reporting system and use this to improve the monitoring of volunteering projects and track measurable targets.
Increase the budget for donations and sponsorship by 3% annually until 2025 (started in 2022).	• The budgets for donations and sponsoring activities across the Group stood at EUR 5.5 million in 2025 (2024: EUR 6.4 million). • To better reflect our current scope of consolidation, we have also determined the budgets for the HOCHTIEF companies that we report on as fully consolidated companies. According to the scope of consolidation, including Thiess and Dornan, the budget for donations and sponsorship in 2025 was approximately EUR 6.7 million. We have therefore achieved our target.

G

Governance
Update on selected targets



1 At HOCHTIEF's Annual General Meeting, CEO Juan Santamaría underlined: "Our success is based on our highly qualified and motivated employees. They deliver unique projects and top performance—with full commitment every single day. This deserves our utmost respect and recognition." | **2** Once a year, HOCHTIEF's compliance managers come together for a conference. At the 13th annual event in 2025, the focus was on antitrust law, the use of external personnel, and tax compliance. | **3** Low-threshold, multilingual contact options, such as a new flyer, are among the tools used in the area of compliance.

Our target in the Sustainability Plan	Status as of 2025
Anti-corruption and Anti-bribery	
Maintain 100% of the employees trained in compliance training (including all new hires)	• During the reportig period, a training rate of 100% was achieved.
Responsible Supply Chain	
By 2025: Include ESG criteria in 50% of the significant supplier's selection process (based on procurement spend).	• Significant increase: ESG criteria incorporated into 90% (2024: 81%) of major award decisions. This is based among other factors on the contractual acknowledgement of our Code of Conduct for Business Partners, ESG screening by external providers, and self-disclosure by our suppliers and subcontractors.
By 2025: Increase annually the percentage of suppliers receiving systematic post project assessment, with at least 50% of significant suppliers assessed	• Target achieved: Group-wide, in 2025 around 56% of significant suppliers underwent system-based assessments following completion of contract execution. • Roll-out of supplier assessments is to continue in 2026, including at HOCHTIEF in Europe. This means the total number of assessments will further increase in 2026.
Human Rights	
Train 100% of the employees in Human Rights Risks by 2025	• During the reportig period, a training rate of 100% was achieved.
Sustainability Governance	
We aim to integrate ESG targets in the compensation of the Executive Board and Executives Group-wide, by 2025	• Sustainability targets have been integrated into the variable compensation for the Executive Board. The sustainability targets relate to the development of the health and safety key indicator Lost Time Injury Frequency Rate (LTIFR) and the reduction of CO_2. • The development of the health and safety key indicator LTIFR was also integrated into the performance-based remuneration of employees in management and expert levels 1 to 4 in the German companies. • At CIMIC, executives are required under the Safety Leadership Scores (SLS) to contribute to, and to ensure their teams contribute to, the identification, assessment, and improvement of critical risk controls, thereby reducing the risk of serious safety incidents and injuries. Their performance is reflected in their SLS, which is reviewed as part of the performance evaluation, and the results are subsequently taken into account when determining variable remuneration (Short Term Incentive). • At Turner, promoting a safe working environment is part of the competency assessment for managers, which is taken into account when determining individual variable compensation.

Sustainable Development Goals at HOCHTIEF

HOCHTIEF's contributions to the United Nations Sustainable Development Goals

HOCHTIEF is committed to the Agenda 2030 for Sustainable Development and has adopted the 17 Sustainable Development Goals (SDGs). In connection with our business activities, the goals and indicators are of relevance to sustainability management at the HOCHTIEF Group. In this overview, we point to HOCHTIEF's concrete contributions.

End poverty in all its forms everywhere:

- Construction of social infrastructure (cultural and educational properties, etc.)
- Collaboration with local subcontractors/SMEs
- Social corporate citizenship/donation and sponsorship projects for local communities

End hunger, achieve food security and improved nutrition and promote sustainable agriculture:

- Construction and preservation of transportation infrastructure
- Protection of ecosystems and sustainable processes during construction and operation of projects
- HOCHTIEF emissions target of "net zero" climate neutrality by 2045 in order to preserve the nat-

Ensure healthy lives and promote well-being for all at all ages:

- Active promotion of occupational safety and health; health offerings and sports exercise programs for employees
- Construction of healthcare properties
- Social corporate citizenship/donation and sponsorship projects for local communities

Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all:

- Extensive continuing education offerings for HOCHTIEF employees
- Construction and operation of educational properties
- Support for academic projects/collaboration with universities
- Social corporate citizenship/donation and sponsorship projects for local communities

"Achieve gender equality and empower all women and girls"

- Support for female students in STEM subjects at schools and universities
- Awareness training to combat unconscious bias
- HOCHTIEF initiatives and goals for more women in management positions

Ensure availability and sustainable management of water and sanitation for all:

- Construction of flood protection projects and water treatment plants
- Construction of water supply and wastewater disposal projects

Ensure access to affordable, reliable, sustainable, and modern energy for all:

- Construction of energy infrastructure projects
- Construction of sustainable/certified building and infrastructure projects
- Construction and operation of renewable energy projects

"Promote sustained, inclusive, and sustainable economic growth, full and productive employment, and decent work for all"

- Support for businesses run by women and minorities
- Sustainable financing measures
- Human rights due diligence initiatives in the supply chain

Build resilient infrastructure, promote inclusive and sustainable industrialization, and foster innovation:

- Construction of sustainable, certified infrastructure projects
- Implementation of PPP models
- Expansion and new construction of transportation infrastructure as well as telecommunications grid expansion
- Group-wide digitalization and innovation projects
- Involvement in associations and industry initiatives
- Support for academic projects/collaboration with universities

Reduce inequality within and among countries:

- Support for employees in crises not of their own making
- Social corporate citizenship/donation and sponsorship projects for local communities

Make cities and human settlements inclusive, safe, resilient, and sustainable:

- Construction of sustainable, certified, and resilient projects
- Construction of cultural and educational properties, public buildings, and public transportation infrastructure
- Implementation of PPP models
- Social corporate citizenship/donation and sponsorship projects for local communities Involvement in associations and industry initiatives

Ensure sustainable consumption and production patterns:

- Sustainability in procurement and in the value chain
- High standards in occupational health and safety as well as environmental protection
- Life cycle management
- Construction of infrastructure for the energy transition

Take urgent action to combat climate change and its impacts:

- Sustainability in the construction process and value chain
- Construction of flood protection projects and resilient infrastructure
- Involvement in associations and industry initiatives

Conserve and sustainably use the oceans, seas and marine resources

- Support for water protection in our project activities
- Measures to conserve biodiversity

Protect, restore, and promote sustainable use of terrestrial ecosystems:

- Sustainability in the construction process and value chain
- Measures to conserve biodiversity, e.g. rehabilitation measures

Promote peaceful and inclusive societies for sustainable development:

- Active compliance work
- Social corporate citizenship/donation and sponsorship projects for local communities

Strengthen the means of implementation and revitalize the global partnership for sustainable development:

- Involvement in associations and industry initiatives
- Active participation in initiatives

Ten Principles of the UN Global Compact

HOCHTIEF reports in accordance with the principles of the UN Global Compact:

Index for the 10 Principles of the UN Global Compact (UNGC)

UNGC Principle	Location of the information in this Group Report (section)[1]
1: Businesses should support and respect the protection of internationally proclaimed human rights.	Goals and strategies; Own workforce; Workers in the value chain; Affected communities; Business conduct
2: Businesses should make sure that they are not complicit in human rights abuses.	Goals and strategies; Own workforce; Workers in the value chain; Affected communities; Business conduct
3: Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining	Own workforce; Workers in the value chain
4: Businesses should uphold the elimination of all forms of forced and compulsory labor.	Own workforce; Workers in the value chain
5: Businesses should uphold the effective abolition of child labor.	Own workforce; Workers in the value chain
6: Businesses should uphold the elimination of discrimination in respect of employment and occupation.	Goals and strategies; Own workforce; Workers in the value chain
7: Businesses should support a precautionary approach to environmental challenges.	Climate change; Pollution; Water and marine resources; Biodiversity and ecosystems; Resource use and circular economy
8: Businesses should undertake initiatives to promote greater environmental responsibility.	Climate change; Pollution; Water and marine resources; Biodiversity and ecosystems; Resource use and circular economy; Own workforce
9: Businesses should encourage the development and diffusion of environmentally friendly technologies.	Goals and strategies; Climate change; Pollution; Water and marine resources; Biodiversity and ecosystems; Resource use and circular economy
10: Businesses should work against corruption in all its forms, including extortion and bribery.	Business conduct

[1] The HOCHTIEF Code of Conduct likewise includes HOCHTIEF's commitment to the ten principles of the UN Global Compact.

Compensation report

This compensation report describes the essential features of the compensation systems for the Executive Board and Supervisory Board. In addition, the compensation received for 2025 by each member of the Executive Board and Supervisory Board of HOCHTIEF Aktiengesellschaft is individually disclosed. The report complies with the requirements of Section 162 of the German Stock Corporations Act (AktG) and is based on the recommendations and requirements of the German Corporate Governance Code (GCGC). The compensation report for 2024 was approved by the Annual General Meeting on April 29, 2025 (agenda item 6) with a majority of 93.58% of votes cast.

Compensation of members of the Executive Board

Review of compensation in 2025

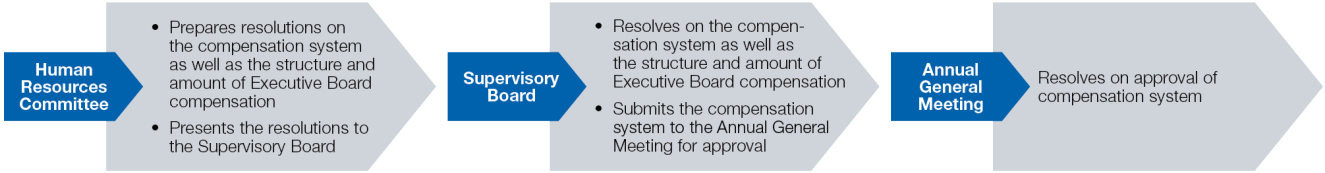
Compensation system

The current compensation system for members of the Executive Board is geared toward long-term, sustainable management. Criteria for determining the appropriateness of compensation comprise the duties of each member of the Executive Board, their personal performance, the economic situation, the performance and future prospects of the Company, as well as the customary level of compensation, taking peer companies into account. The objective of the compensation system is to support successful and sustainable management by linking the compensation of Executive Board members to both the short-term and long-term performance of the Company. It comprises personal and corporate performance parameters. Variable compensation components have a predominantly multi-year assessment basis and thus provide long-term incentives. The structure of long-term variable compensation, which also reflects share price performance, additionally ensures that the goals of management are aligned with immediate shareholder interests. The current compensation system for members of the Executive Board was adopted by resolution of the Supervisory Board following preparation by the Human Resources Committee and approved by the Annual General Meeting on April 25, 2024 (agenda item 8) with a majority of 96.84% of votes cast.

Determination and review of the compensation system

The Supervisory Board as a whole is responsible for adopting resolutions on the compensation system for members of the Executive Board and for setting individual compensation. In this, the Supervisory Board is supported by the Human Resources Committee. The latter oversees the appropriate structuring of the compensation system and prepares resolutions for the Supervisory Board.

In the event of material changes to the compensation system and, since 2021 at minimum once every four years, the compensation system is submitted to the Annual General Meeting for approval.



The compensation report was prepared jointly by the Executive Board and the Supervisory Board and is audited in terms of its form and content by the audit firm Deloitte GmbH Wirtschaftsprüfungsgesellschaft.

Relevant changes

The contract with Mr. Sassenfeld has not been extended and, as contractually agreed, continues to run until October 31, 2026. Mr. Sassenfeld stepped down with effect from June 30, 2025 in order to enable his successor to be instated at a suitable point in time in the interests of the Company.

Ms. Christa Andresky was appointed as a new member of the Executive Board effective June 23, 2025, assuming the role of Chief Financial Officer on July 1, 2025. She will exercise this office in parallel to her previous role as CFO at the subsidiary Turner in North America.

Principles for determining compensation

The Executive Board compensation system contributes significantly to advancing the Group strategy.

Both the compensation system and the performance criteria (targets) for its variable components incentivize the Group's long-term, sustainable development.

The compensation system contributes significantly to ensuring alignment with the interests of shareholders, clients, employees, and other stakeholders.

Executive Board member performance is suitably recognized by setting adequate and ambitious performance criteria (targets) for the variable remuneration components (pay for performance).

The design of the compensation system reflects current market practice.

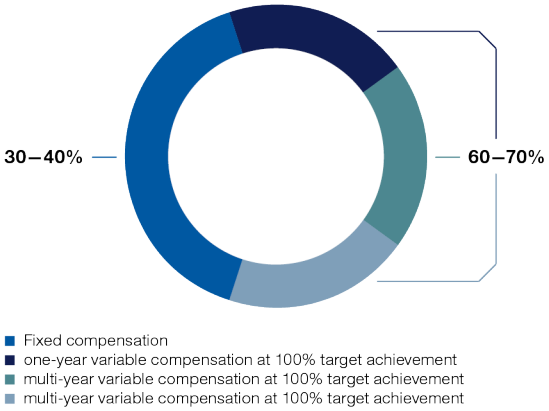
Setting of target compensation

In detail, the total target compensation comprises non-performance-related fixed compensation, fringe benefits, performance-related variable compensation comprising a Short-term Incentive Plan (STIP) and two Long-term Incentive Plans (LTIP I/II), and pension payments or pension benefits.

Fixed compensation makes up between 30% and 40% of target direct compensation, while variable compensation components equate to between 60% and 70% of target direct compensation. About two-thirds of variable compensation (LTIP I/II) are not at the immediate disposal of Executive Board members. This amount is dependent upon the development of future performance indicators and thus geared to the Company's long-term business performance.

Compensation structure

(Target direct compensation excluding fringe benefits and pension payments/pension expense)



The following table shows the contractually agreed target compensation with 100% target attainment and the compensation structure as a percentage of target total compensation for 2024 and 2025.

Target compensation	Santamaría Cases Chairman of the Executive Board Date joined: July 20, 2022				Andresky Chief Financial Officer Date joined: June 23, 2025				Muriel Bernal Member of the Executive Board Date joined: April 17, 2023

[1] Transfer of shares with three-year lock-up period
[2] Granted as Long-term Incentive Plan (for details of the plans, please see pages 352 to 354); amount at grant date
[3] To avoid duplication of functions, Martina Steffen, in her capacity as Chief Human Resources Officer/Labor Director of the HOCHTIEF Group, additionally assumed the role of Chief Human Resources Officer of the ACS Group from April 2024. ACS therefore provides 25% of Martina Steffen's total compensation from then onward.

Third-party remuneration

When majority shareholder ACS set up the Long-Term Incentive Plan 2023–28, ACS granted Executive Board members Peter Sassenfeld and Martina Steffen 200,000 options each under Long-Term Incentive Plan 2 in 2023. ACS does not pass on the cost of the ACS stock options to HOCHTIEF.

Compliance with maximum compensation

In order to ensure that the compensation system has a balanced risk-reward profile and corresponding incentive effect, the variable compensation components are structured in such a way that they can fall in amount to zero or rise to a maximum of 200%. Additionally, caps are agreed when granting LTIPs.

A maximum compensation level has also been set for all members of the Executive Board. Under the compensation system, the maximum annual compensation is EUR 9 million for the Chairman of the Executive Board and EUR 6 million for ordinary members of the Executive Board. HOCHTIEF defines the maximum compensation as the total compensation paid for the year in question (including fringe benefits, current service cost for post-employment benefits or the cost of the pension payment for the year concerned, and the amount paid out under the Long-term Incentive Plan for that year).

The maximum compensation for 2025 will only be able to be reviewed in 2029 to 2031 following exercise of the 2026 Long-term Incentive Plan, which is granted for 2025.

Appropriateness of compensation

The Supervisory Board regularly reviews the system and the appropriateness of individual compensation components as well as of compensation as a whole. In this connection, it considers the amount and structure of executive board compensation at peer companies (horizontal benchmark) and the ratio of Executive Board compensation to employee compensation, including over time (vertical benchmark).

The review for appropriateness and market conformity of Executive Board compensation has to date been based on comparison with compensation at the companies listed in the MDAX index. Given HOCHTIEF's inclusion in the index and the key indicators sales, number of employees, and market capitalization, the MDAX comparison is a valid benchmark.

For the vertical benchmark, the Supervisory Board looks at compensation both at the level of managerial employees and at the level of the workforce in Germany over time.

Application of the compensation system in 2025

Compensation components		Structure	Objectives and strategic aim
Fixed compensation		Fixed contractual compensation paid in 12 monthly installments.	• Reflects Executive Board role, experience, area of responsibility, and market conditions. • Ensures adequate income to prevent entering into inappropriate risks.
Fringe benefits		Costs of preventive medical examinations, insurance, amounts to be recognized for tax purposes for private use of company cars, expatriation expenses, tax consulting costs.	• Reimbursement of costs and compensation for economic disadvantages that arise in relation to Executive Board service.
Variable compensation	Short-term Incentive Plan (STIP)	**One-year variable compensation**, dependent on financial and non-financial performance criteria (targets).	• Achievement of business goals for the respective year. • Incentivizes profitable growth and stable cash flow. • Takes into account operational success at Group level. • Firmly enshrines the sustainability strategy in Executive Board compensation.
	Long-term Incentive Plan I (LTIP I)/Share ownership	**Multi-year variable compensation**, dependent on financial and non-financial performance criteria (targets). Paid out by transfer of shares.	• Provides incentive to sustainably increase corporate value over the long term. • Focus on capital market performance. • Takes the interests of our stakeholders into account.
	Long-term Incentive Plan II (LTIP II)	**Multi-year variable compensation**, dependent on financial and non-financial performance criteria (targets). Paid out by the granting of an annual Long-term Incentive Plan.	• Provides incentive to sustainably increase corporate value over the long term. • Focus on capital market performance and stable cash flow. • Takes the interests of our stakeholders into account.
Pension payment/ pension benefits		• Newly appointed Executive Board members (from 2021) receive a lump-sum pension payment that is paid out directly. • The other Executive Board members receive an individual pension award setting the minimum pension age at 65.	• Provides adequate retirement benefits.
Maximum total compensation		• Variable compensation may decrease to zero or increase to 200%. • Maximum amounts (caps) for the Long-term Incentive Plans. • The maximum annual compensation is EUR 9 million for the Chairman of the Executive Board and EUR 6 million for ordinary members of the Executive Board.	• Avoids inappropriately high payouts.
Malus/clawback arrangement		• Clawback right under Section 87 (2) of the German Stock Corporations Act (AktG). • For every Executive Board member it is possible to reduce or claw back variable compensation components in the event of serious breaches of statutory obligations or in-house codes of conduct.	• Ensures appropriateness of variable compensation. • Ensures sustainable corporate development.
Continuation of payment in the event of illness		• In the event of incapacity, entitlement to the fixed annual salary and the pro rata variable compensation is retained for a period of 12 months.	• Provides adequate sickness benefits.
Arrangements in the event of termination of contract		• In the event of early termination, severance awards will not exceed the value of two years' annual compensation (severance cap). • There is no special right of termination or entitlement to any severance award in the event of a change of control. • If their contract is not extended, Executive Board members who were appointed before 2021 receive a severance award equaling one year's fixed compensation. • In the event of termination of contract, multi-year variable compensation components are paid out in accordance with the originally agreed targets and the contractually specified due dates or holding periods. • The contracts do not include a post-contractual non-compete clause. In exercise of its professional judgment, the Supervisory Board is authorized to agree a post-contractual non-compete clause (with compensation) in suitable cases.	• Cap on benefits in the event of early termination of Executive Board service in accordance with the German Corporate Governance Code. • Avoidance of inappropriately high payments.
Sideline activities		• Interests in companies and paid or unpaid sideline activities—including office in supervisory bodies or advisory boards—that affect the interests of HOCHTIEF, its subsidiaries or associates, or Executive Board service may only be assumed with the approval of the Supervisory Board. There is normally no entitlement to further compensation for holding office on the boards of other companies in which the Company has a direct or indirect interest. Only in exceptional cases may the Supervisory Board resolve not to deduct any such compensation. • Upon assumption of supervisory board positions outside the Group, the Supervisory Board will decide whether and to what extent the compensation is also to be deducted in such cases.	• Focus on Executive Board service. • Avoidance of inappropriately high payments.
Third-party remuneration		• Participation by Executive Board members in Long-term Incentive Plans of the main shareholder ACS is permitted under this remuneration system, but is only approved by the Supervisory Board after reviewing the appropriateness of the total remuneration and after assessing a potential conflict of interest. As so-called third-party remuneration, any participation in the Long-term Incentive Plans of the main shareholder ACS is not part of the total target overall remuneration within the meaning of this remuneration system and is also not included in the maximum total remuneration.	• Incentive to increase the value of the Company sustainably and over the long-term, taking into account the strategic goals of main shareholder ACS

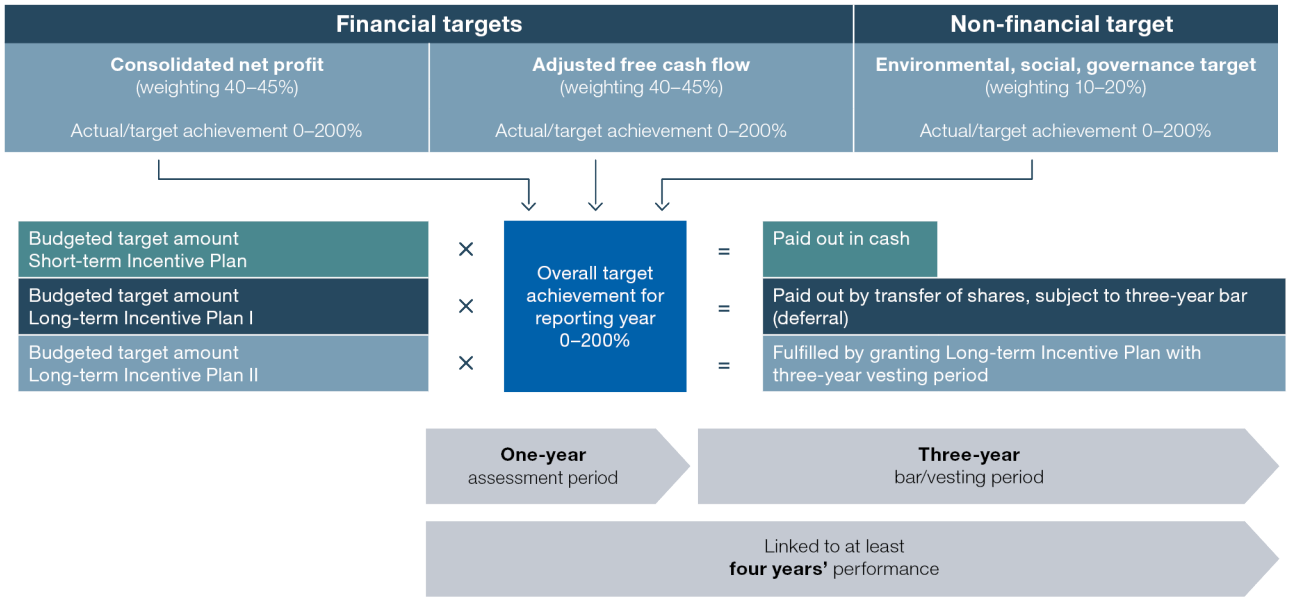
Fixed compensation

Fixed compensation for members of the Executive Board was paid pro rata as a monthly salary.

Fringe benefits

In addition to the fixed compensation, the members of the Executive Board also received fringe benefits. These primarily comprised amounts to be recognized for tax purposes for private use of company cars and other non-cash benefits.

Variable compensation



Variable compensation is intended to provide the right incentives for the Executive Board to act in keeping with the corporate strategy and in the interests of shareholders, clients, employees, and other stakeholders. In order to ensure that the corporate strategy is implemented in line with the long-term and sustainable development of the Company, financial and non-financial annual targets are derived whose attainment is incentivized with variable compensation. The variable compensation is intended as remuneration for performance. If targets are not met, variable compensation can drop to zero.

Performance criteria	Weighting	Incentive effect and strategic goal
Consolidated net profit	40%	Generating net income enables the Group to reinvest in the business, seize growth opportunities, and distribute profits to shareholders.
Adjusted free cash flow	40%	Targeting cash-backed profit ensures earnings quality and requires management to focus on free cash flow.
ESG targets 2025 1. Health & safety 2. Carbon reduction	20%	The ESG targets are important for implementation of the adopted Sustainability Plan 2025.

Since 2024, 80% of variable compensation for members of the Executive Board has been tied to financial targets and 20% to a non-financial environmental, social, and governance (ESG) target. In accordance with the corporate strategy, financial targets are based 50% on consolidated net profit and 50% on adjusted free cash flow. Generating net income enables the Group to reinvest in the business, seize growth opportunities, and distribute profits to shareholders. Targeting cash-backed profit ensures earnings quality and requires management to focus on free cash flow. Focusing on consolidated net profit and free cash flow is therefore an integral and essential part of the Group strategy.

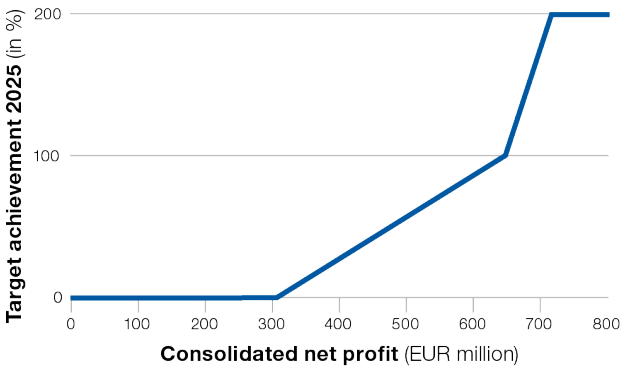
In addition, at least one ESG target is included as a non-financial target. The Supervisory Board will use its professional judgment in defining this target and also retains the authority to set two or three ESG targets. For 2025, the Supervisory Board set two ESG targets and left their proportion of the total at 20%.

Both for the individual financial targets and for the ESG targets, the potential target achievement rate ranges from 0% to 200%. If actual target achievement is at or below the lower end of that range, the target achievement rate is always 0%. Should the target achievement rate be 0% for all targets, the overall target achievement rate is also 0% and there is no STIP and LTIP I payout and no Long-term Incentive Plan award to fulfill the LTIP II compensation component. If actual target achievement is at or above the upper end of the range, the 200% maximum target achievement rate applies.

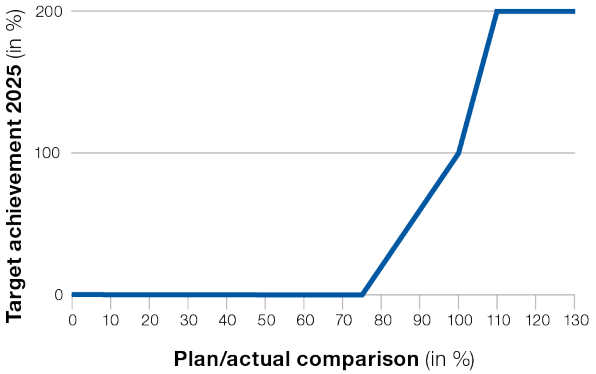
In the exercise of its professional judgment and having regard to budgeting, the Supervisory Board will set targets for the key performance indicators of consolidated net profit and (adjusted) free cash flow as well as for the ESG target prior to or at the beginning of each financial year. These are set uniformly for all members of the Executive Board. The targets and benchmark parameters are not subsequently altered.

At the end of each year, on the basis of Group performance in the year concerned, the Supervisory Board determines overall target achievement for variable compensation on approval of the annual financial statements. For the purposes of target/actual comparison—if there have been any material acquisitions, divestments, or other non-recurring events—the target achievement rates for the financial targets are adjusted to factor out the effect of the transactions concerned. In accordance with the first sentence of Recommendation G.11 of the German Corporate Governance Code, the Supervisory Board is required to have the option of allowing for exceptional developments to an appropriate extent when determining target achievement.

Consolidated net profit

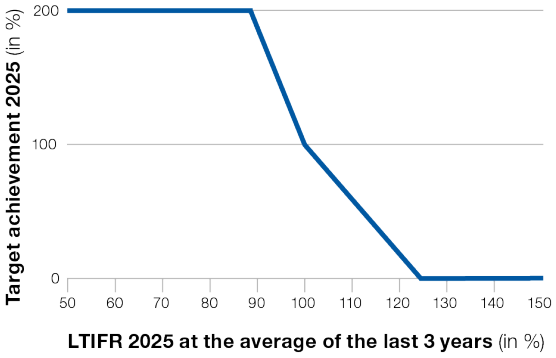


Adjusted free cash flow

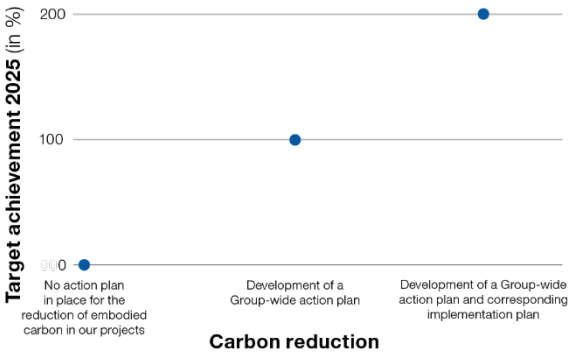


For 2025, 80% of overall target achievement in respect of variable compensation for members of the Executive Board was tied to financial targets and 20% to non-financial sustainability targets. Consolidated net profit amounted to EUR 902 million in 2025. This represents a target achievement rate of 200% for this financial target. Since the plan/actual comparison of adjusted free cash flow amounts to more than 110%, a target level of 200% was achieved for this financial target in 2025. In addition, the following non-financial ESG targets were adopted for 2025. The first ESG target related to the health and safety indicator, LTIFR (Lost Time Injury Frequency Rate). As the LTIFR is down on the last-three-year average to 74,74%, target achievement is 200%. The second ESG target was based on carbon reduction. This related to the development of a Group-wide action plan and a corresponding implementation plan for the reduction of embodied carbon in our projects. As an action plan and implementation plan were adopted, achievement of this non-financial targets was 200%. Taking into account the relevant weighting, the overall target achievement for the variable compensation for 2025 is 200%.

ESG targets



LTIFR 2025 at the average of the last 3 years (in %)



Carbon reduction

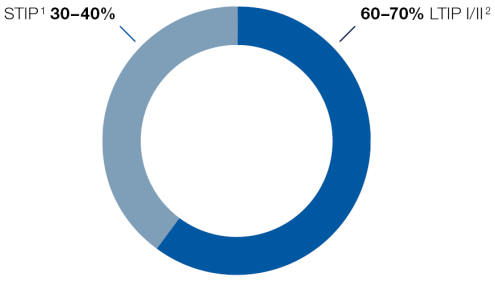
Total target achievement in 2025 for variable compensation (STIP/LTIP I / LTIP II)

	Target achievement	Weighting	Result
Consolidated net profit	200.00%	40%	80.00%
Adjusted free cash flow	200.00%	40%	80.00%
Health and Safety / LTIFR (lost time injury frequency rate)	200.00%	15%	30.00%
Carbon reduction: Development of a Group-wide action and implementation plan for the reduction of embodied carbon in our projects	200.00%	5%	10.00%
Total target achievement			**200.00%**

	Target compensation at 100% (budgeted amount) (EUR thousand)			**Amount granted and owed for 2025 based on overall target achievement (EUR thousand)**		
	Short-term Incentive Plan	Long-term-Incentive Plan I	Long-term-Incentive Plan II	Short-term Incentive Plan	Long-term-Incentive Plan I	Long-term-Incentive Plan II
Santamaría Cases	885	568	568	1,771	1,135	1,135
Andresky (pro rata from entry)	149	112	112	298	223	223
Muriel Bernal	362	230	230	725	461	461
Sassenfeld (pro rata until leaving)	236	236	236	473	473	473
Steffen	296	296	296	592	592	592

Depending on the composition of each Executive Board member's compensation, about one-third of the variable compensation is paid out in cash (STIP). About another one-third of post-tax variable compensation is paid by transferring shares in HOCHTIEF Aktiengesellschaft to an Executive Board member's custody account. Executive Board members can freely dispose of these dividend-bearing shares only after a three-year vesting period (LTIP I – Deferral). This ensures share ownership in HOCHTIEF by members of the Executive Board.

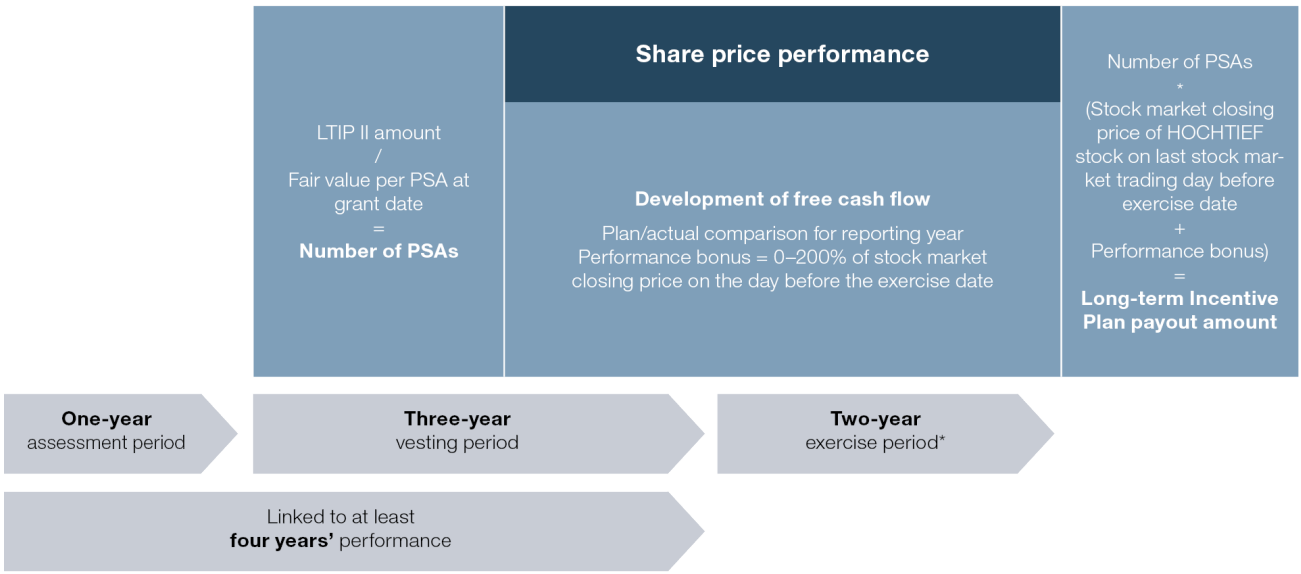
Variable compensation



[1] one-year variable compensation [2] multi-year variable compensation

The remaining approximately one-third of the variable compensation (LTIP II) is matched by granting a Long-term Incentive Plan, which is relaunched annually and has a three-year vesting period. This ensures that the amounts awarded for long-term incentive components I (deferral) and II are dependent on attainment of the targets for the respective year and thus are linked to a minimum of four years' performance.

Under the Long-term Incentive Plan, Executive Board members are granted performance stock awards (PSAs). For this purpose, the amount for the LTIP II compensation component is converted into a quantity of performance stock awards based on the fair value per PSA. Under the plan conditions, for each PSA exercised within a two-year exercise period* following a three-year waiting period, Executive Board members receive a payment entitlement equal to the closing price of HOCHTIEF stock on the last stock market trading day before the exercise date, plus a performance bonus. The size of the performance bonus depends on target achievement on adjusted free cash flow in the last complete year before the exercise date. The performance bonus can be between 0% and 200% of the stock market closing price of HOCHTIEF stock on the last stock market trading day before the exercise date. Both the stock price and the performance bonus are capped so that the amount of compensation stays appropriate even in the event of exceptional, unforeseeable developments.



* Due to U.S. tax rules, Ms. Andresky can only exercise the Plan after a four-year waiting period to December 1 of the exercise year.

Long-term Incentive Plans exercised in 2025

	LTIP 2022

Share ownership

As a result of the LTIP I component being granted in shares, the Executive Board members hold barred HOCHTIEF shares as follows:

	Number of barred shares as of December 31, 2025 from the granting of LTIP Component I in the last three years	**Value based on closing price of HOCHTIEF share[1] as of December 30, 2025 (EUR thousand)**	**Value as percentage of fixed compensation (extrapolated to an annual fixed compensation)**
Santamaría Cases	8,750	2,949	433%
Muriel Bernal	3,014	1,016	353%
Sassenfeld	13,393	4,513	557%
Steffen	6,434	2,168	428%

[1] The closing price of the HOCHTIEF share as of December 30, 2025 was EUR 337.00.

Pension payment/pension benefits

A company pension is no longer provided for new appointees from 2021 onward. Newly appointed Executive Board members receive a lump-sum pension payment to establish private pension provision that is paid out directly. The pension payment is set for members of the Executive Board by the Supervisory Board when establishing the structure of compensation and amounts to between 20% and 40% of the applicable fixed compensation. This eliminates all interest-rate risks and other biometric risks to the Company with regard to financing pension benefits. It also cuts out the complexity resulting from actuarial calculations and administration. Financing retirement provision is thus placed in the hands of Executive Board members.

The table below shows the pension payments incurred for 2025 for members of the Executive Board in office during the reporting year:

(EUR thousand)		Pension payment
Santamaría Cases	2025	204
	2024	155
Andresky (pro rata from entry)	2025	64
	2024	–
Muriel Bernal	2025	65
	2024	63
Steffen	2025	152
	2024	140
Total	**2025**	**485**
	2024	**358**

All members of the Executive Board who were appointed before 2021 have company pension plans in the form of individual contractual pension arrangements that provide for a minimum pension age of 65. The amount of the pension is determined as a percentage of fixed compensation, the percentage rising with the number of years in office. The maximum amount an Executive Board member can receive is 65% of their final fixed compensation. Surviving dependents receive 60% of the pension. For material modifications to existing contracts, the Human Resources Committee reviews pension provision for the members of the Executive Board as well as the resulting annual and long-term pension expense to the Company. With the aid of an actuarial report, the annual pension expense (service cost) needed to meet the vested pension benefits, including surviving dependents' benefits, is calculated for life from retirement age. Retirement and surviving dependents' benefits are reviewed every three years in accordance with Section 16 of the German Occupational Pensions Act (BetrAVG) and adjusted for the increase in the German consumer price index over the comparison period.

The table below shows the pension expense incurred for 2025 and the amount of the pension obligations for members of the Executive Board in office in the reporting year in accordance with IFRS:

(EUR thousand)		Service cost	Interest expense	Total	Present value of pension benefits
Sassenfeld	2025	814	218	1,032	5,716
	2024	431	187	618	6,169

	2024	**431**	**187**	**618**	**6,169**

Compliance with maximum compensation for 2021 by the exercise in full of LTIP 2022 in 2025.
It was not possible to review the maximum compensation for 2021 until 2025 following the exercise in full of the 2022 Long-term Incentive Plan granted to provide the LTIP II compensation component for 2021.

With all compensation components taken into account, compliance with the maximum compensation of EUR 6 million each for Mr. Sassenfeld and Ms. Steffen was ensured. The maximum compensation was complied with also in the case of all other former members of the Executive Board with whom maximum compensation had been contractually agreed.

[1] Transfer of shares with three-year lock-up period
[2] Expense (amount paid out at exercise date)

None of the other active members of the Executive Board were already in office in 2021, making a compliance check unnecessary.

Negative bonus/clawback arrangement

Pursuant to Section 87 (2) of the German Stock Corporations Act (AktG), variable compensation is subject to a clawback right in the event of deterioration in the Company's situation.

In addition, all Executive Board contracts feature negative bonus/clawback arrangements that make it possible to reduce or claw back variable compensation components in the event of serious breaches of statutory obligations or in-house codes of conduct. The limited-term clawback right continues to apply after termination of Executive Board service. Its exercise is subject to the professional judgment of the Supervisory Board.

In the reporting year, the Supervisory Board did not reduce or claw back any variable compensation components.

Continuation of payment in the event of illness

In the event of medically certified incapacity, Executive Board members retain the right to their fixed annual salary and pro rata entitlements to variable compensation for the duration of 12 months, but not beyond the termination of their contract. The same applies if an Executive Board member is prevented from performing his or her duties on account of other reasons for which they are not responsible.

There was no such case of illness in the reporting year.

Arrangements in the event of termination of contract

In case of early termination of Executive Board mandates, severance payments will not exceed the value of two years' annual compensation (severance cap) and compensation will not be payable for more than the remaining term of the contract. There is no special right of termination or entitlement to any severance award in the event of a change of control.

If their contract is not extended (i.e., upon regular termination), Executive Board members who were appointed before 2021 receive a severance award equaling one year's fixed compensation. For the severance award to be payable, an Executive Board member must, on termination of contract, be in at least the second term of office as a member of the Executive Board and under the age of 65.

In the event of termination of contract, multi-year variable compensation components are paid out in accordance with the originally agreed targets and the contractually specified due dates or holding periods.

The contracts do not include a post-contractual non-compete clause. In exercise of its professional judgment, the Supervisory Board is authorized to agree a post-contractual non-compete clause (with compensation) in suitable cases.

The contract with Mr. Sassenfeld has not been extended and, as contractually agreed, continues to run until October 31, 2026. Mr. Sassenfeld stepped down with effect from June 30, 2025 in order to enable his successor to be instated at a suitable point in time in the interests of the Company. He will receive the contractually agreed pro rata annual compensation through October 31, 2026. The STIP, LTIP I, and LTIP II components will be calculated at the overall target achievement level or at 100%, whichever is greater, and will be paid out according to the contractually specified due dates or holding periods. In connection with the non-extension of the contract, as contractually agreed, a severance payment will be made equaling one year's fixed annual compensation after the point in time at which the contract ended.

Loans and advances

No loans or advances have been granted to any member of the Executive Board.

Exercise of sideline activities by Executive Board members

Interests in companies and paid or unpaid sideline activities—including office in supervisory bodies or advisory boards—that affect the interests of HOCHTIEF, its subsidiaries, or associates or Executive Board service may only be assumed with the approval of the Supervisory Board. Compensation for holding office on the boards of other companies in which HOCHTIEF has a direct or indirect interest was either not paid out to the Executive Board members or was set off against their Executive Board compensation. Only in exceptional cases may the Supervisory Board resolve not to deduct any such compensation. In the reporting year, Ms. Andresky continued her sideline activity at Turner and, in accordance with a Supervisory Board resolution, the remuneration for this was not deducted. For every other Executive Board member, all corresponding sideline activities were deducted.

Furthermore, all Executive Board contracts stipulate that, upon assumption of supervisory board positions outside the Group, the Supervisory Board will decide whether and to what extent the compensation is also to be deducted in such cases.

In the 2025 financial year, Mr. Juan Santamaría Cases exercised his mandate as Chairman of Abertis Infraestructuras, S.A. and Mr. Ángel Muriel Bernal exercised his mandate as a Board Member of Abertis HoldCo, S.A. Abertis is not part of the scope of consolidation of the HOCHTIEF Group. There were no further acquisitions of non-Group supervisory board mandates in the financial year.

Third-party remuneration

No additional third-party remuneration was granted in the financial year.

Disclosures on the amount of Executive Board compensation in 2025 and 2024

Disclosure of compensation granted and owed to active Executive Board members

The following table shows the compensation granted and owed to active Executive Board members for the years 2024 and 2025. "Compensation granted and owed" shows the compensation contractually due to the Executive Board member for the service performed in full in the relevant year.

[1] Transfer of shares with three-year lock-up period
[2] Granted as Long-term Incentive Plan (for details of the plans, please see pages 352 to 354); amount at grant date
[3] On reaching the age of 65, retirement, incapacity to work, or termination of employment by mutual agreement, the performance stock awards may still be exercised.
[4] To avoid duplication of functions, Martina Steffen, in her capacity as Chief Human Resources Officer/Labor Director of the HOCHTIEF Group, additionally assumed the role of Chief Human Resources Officer of the ACS Group from April 2024. ACS therefore provides 25% of Martina Steffen's total compensation from then onward.

Disclosure of compensation of former Executive Board members

Mr. Fernández Verdes received a pension of EUR 737 thousand (67.74%). In addition, in accordance with the plan conditions, the 2022 LTIP was paid out in the 2025 financial year to Mr. Fernández Verdes in the amount of EUR 351 thousand (32.26%). Overall, Mr. Fernández Verdes received total compensation of EUR 1,088 thousand (100%). The 2022 LTIP was likewise paid out to Mr. Legorburo in the amount of EUR 105 thousand, and Mr. von Matuschka in the amount of EUR 120 thousand. The pension is purely fixed compensation and the 2022 LTIP is a purely variable compensation component.

For the period July 1, 2025 to December 31, 2025, Mr. Sassenfeld received fixed compensation of EUR 405 thousand (21.46%) and fringe benefits of EUR 63 thousand (3.34%). In addition, he received STIP payments in the amount of EUR 473 thousand (25.07%), and LTIP I and LTIP II payments each in the amount of EUR 473 thousand (25.07%). Mr. Sassenfeld's total compensation for the period July 1, 2025 to December 31, 2025 was EUR 1,887 thousand (100%). The payments to Mr. Sassenfeld under the STIP, LTIP I, and LTIP II will be calculated pro rata for the 2026 financial year based on minimum target achievement of 100%. Due to the non-extension of his contract, he will receive a contractually agreed severance award equal to one year's fixed compensation.

Payments to other former members of the Executive Board amounted to EUR 4.238 thousand in 2025 (2024: EUR 4,314 thousand).

Compensation of members of the Supervisory Board

Structure of Supervisory Board compensation

By resolution of the Annual General Meeting of May 6, 2015, Supervisory Board members receive only fixed remuneration. The compensation system for Supervisory Board members, including the compensation arrangement under Section 18 of the Articles of Association, was amended by resolution of the Annual General Meeting of April 29, 2025.

In accordance with Section 18 (1) of the Articles of Association, each member of the Supervisory Board receives a fixed compensation of EUR 80,000 per calendar year plus a fee of EUR 2,000 per meeting of the Supervisory Board or the Audit Committee attended and a fee of EUR 1,500 per meeting of any other committee of the Supervisory Board attended. In addition, members of the Supervisory Board receive reimbursement of their expenses including any value added tax which may be payable on their compensation.

In accordance with Section 18 (2) of the Articles of Association, the Chairman of the Supervisory Board receives three times the amount of the above fixed fee, their deputy and the chairman of any committee of the Supervisory Board are paid twice the amount, and the other members of such committees are paid 1.5 times the amount. Any Supervisory Board member who holds more than one such office at the same time receives only the payment for the highest-paid office held. Individuals who are members of the Supervisory Board for only part of a year receive a pro rata share of the compensation for the year concerned calculated on the basis of the duration of their membership.

The fixed compensation and the attendance fees are due at the end of the respective year. The Supervisory Board compensation and the attendance fees for 2025 were paid in January 2026.

Disclosures on the amount of Supervisory Board compensation in 2025 and 2024

The expense for fixed compensation, meeting attendance fees, and compensation for offices held at Group companies came to EUR 2,648 thousand in 2025 (2024: EUR 2,231 thousand, excluding value added tax).

The following table shows the amount of total compensation payable to the individual Supervisory Board members incumbent in 2025 compared with the prior year. In addition, individual members of the Supervisory Board of HOCHTIEF Aktiengesellschaft who hold offices at Group companies received compensation for their services, which is also shown in the table. The amounts and percentages shown in the last line of the following table ("Supervisory Board total") for 2024 relate to all members of the Supervisory Board incumbent in 2024; hence, this also includes the figures for the one former member of the Supervisory Board who left during 2024.

Forward-looking statements

This Group Report contains forward-looking statements. These statements reflect the current views, expectations and assumptions of the Executive Board of HOCHTIEF Aktiengesellschaft concerning future events and developments relating to HOCHTIEF Aktiengesellschaft and/or the HOCHTIEF Group and are based on information currently available to the Executive Board of HOCHTIEF Aktiengesellschaft. Such statements involve risks and uncertainties and do not guarantee future results (such as profit before tax or consolidated net profit) or developments (such as with regard to possible future divestments, planned investments or acquisitions, general business activities or business strategy). Actual results (such as profit before tax or consolidated net profit), dividends and other developments (such as with regard to possible future divestments, planned investments or acquisitions, general business activities or business strategy) relating to HOCHTIEF Aktiengesellschaft and the HOCHTIEF Group may therefore differ materially from the expectations and assumptions described or implied in such statements due to, among other things, changes in the general economic, sectoral and competitive environment, capital market developments, currency exchange rate fluctuations, changes in international and national laws and regulations, in particular with respect to tax laws and regulations, the conduct of other shareholders, and other factors. Any information provided on dividends is additionally subject to the recognition of a corresponding unappropriated net profit in the published separate financial statements of HOCHTIEF Aktiengesellschaft for the fiscal year concerned and the adoption by the competent decision-making bodies of HOCHTIEF Aktiengesellschaft of appropriate resolutions taking into account the prevailing situation of the Company. Aside from statutory obligations, for example publication obligations, HOCHTIEF Aktiengesellschaft does not assume any obligations to update any forward-looking statements.
